Smart Polymers For Bioseparation And Bioprocessing:

Smart Polymers Igor Galaev,Bo Mattiasson,2007-07-25 The first book to tackle the application of smart polymers in bioseparation and bioprocessing Smart Polymers Applications in Biotechnology and Biomedicine broke new ground in this challenging field Completely revised updated and following in the footsteps of its predecessor the second edition is poised to take its place as a premier reference in this field This new edition considers those polymers in which a highly nonlinear response of a smart polymer to small changes in the external medium is of critical importance for the successful functioning of the system The systems discussed are based on soluble insoluble transition of smart polymers in aqueous solution on conformational transitions of the macromolecules physically attached or chemically grafted to a surface and on the shrinking swelling of covalently cross linked networks of macromolecules i e smart hydrogels The book focuses on the theory describing the behavior of smart polymers in solution as gels and when grafted to surfaces It provides solid quantitative descriptions and reliable guidelines reflecting the maturation of the field and the demand for the development of new smart polymer systems The coverage highlights smart gels and especially fast responding and macroporous gels as these gels pave the way to different applications of smart polymers in the areas of bioseparation drug release and microfluidics With contributions from leading researchers as well as extensive end of chapter references this volume offers a comprehensive overview of the current state of the art in the field and the potential for future developments

Smart Polymers for Bioseparation and Bioprocessing Igor Galaev,Bo Mattiasson,2001-11-15 Smart polymers are macromolecules capable of undergoing rapid reversible phase transitions from a hydrophilic to a hydrophobic microstructure when triggered by small changes in their immediate environment such as slight variations in temperature pH or ionic strength Until now it has always been considered that polymers are passive participants within the Bioseparation procedure Smart Polymers for Bioseparation and Bioprocessing addresses an entirely novel theory that advocates a much more active role for smart polymers within this process than has previously been envisaged and therefore focuses on the role of these smart polymers within bioseparation With contributions from the leading researchers working on smart polymers and their applications this volume offers a comprehensive overview of both the current state of affairs within this research field and the potential for future developments This book will be of interest to those working on techniques of bioseparation and bioprocessing polymer chemists developing new smart polymers as well as graduates in biotechnology
