Oxford Textbook of Neurorehabilitation Volker Dietz, Nick S. Ward, 2020-05-28 Neurorehabilitation is an expanding field with an increasing clinical impact due to an ageing population During the last 20 years neurorehabilitation has developed from a discipline with little scientific background separated from other medical centers to a medical entity largely based on the principles of evidenced based medicine with strong ties to basic research and clinical neurology Today

neurorehabilitation is still a work in progress and treatment standards are not yet established for all aspects of the field. There are very few books that address contemporary neurorehabilitation from this perspective. This new edition of the Oxford Textbook of Neurorehabilitation provides an understanding of the theoretical underpinnings of the subject as well as a clear perspective on how and why to approach treatment decisions on an individualized basis. The book has been thoroughly updated to reflect novel important developments in the field and includes new chapters on vocational rehabilitation, self-management strategies in neurorehabilitation, and music-supported therapy in neurorehabilitation. This indispensable book will be of great interest to rehabilitation physicians, neurologists, and allied health care professionals who look after patients requiring neurorehabilitation.

Systematic Instruction of Functional Skills for Students and Adults with Disabilities Keith Storey, 2022-03-01. This book provides an overview of systematic instructional strategies and is written in a format so that teachers and other service providers can immediately put the information to use. It specifically focuses upon systematic instruction for individuals with disabilities, school age and adults, and is generic across age groups as well as disability labels. The book focuses on improving instructional practices for students and adults with disabilities. Practitioners may understand the importance of placing individuals in different settings, e.g., inclusive classrooms, supported employment sites, but not understand how to improve their skills once they are in that setting. This book is intended to give teachers and other service providers the instructional skills for improving the skills of the individuals that they are serving. The most unique feature of the text is that it is written specifically for practitioners in the field: teachers and adult service providers as well as those in training, rather than being written for other academics. An advantage of this book is that those preparing teachers and others can easily use it in

methods courses as it covers instructional methodology that is seldom covered in detail in most texts College instructors will find the book a good choice for their classes based upon the consistent format throughout the book the readability of the book for students the comprehensive coverage of systematic instruction and the direct applicability to applied settings Others providing instruction supervision and training to direct service providers will find this book useful such as those working in schools as well as those in transition and adult service settings
