single layer of carbon atoms in a honeycomb nanostructural arrangement is the thinnest and strongest material yet known to science. Despite that this pristine carbon allotrope exhibits a variety of outstanding properties, its zero bandgap prevents its use for some optoelectronic applications. Fragments of graphene or nanographenes have shown a great potential to obviate these problems, thus paving the way for the development of chiroptical and optoelectronic properties. Molecular Nanographenes constitutes a comprehensive overview on the synthesis of these materials and their properties. Covering their widely varying morphologies, their potential applications and their valuable chiroptical and photophysical features, it also analyzes multiple approaches to obtain nanographene by using both top down and bottom up methodologies. The result is a one stop shop for materials scientists and other researchers interested in these emergent and fascinating materials. Molecular Nanographenes readers will also find a careful distinction between top down and bottom up approaches to nanographene synthesis. Detailed discussion of nanographene configurations including planar bilayer helical nanobelt and many other geometries. An authorial team with pioneering research experience in the study of nano sized graphenes and their synthesis. Molecular Nanographenes is ideal for materials scientists, polymer chemists, solid state chemists, organic chemists and any other researchers looking to work with shape and size controlled flakes of graphenes. Multicomponent Reactions Raquel P. Herrera, Eugenia Marqués-López, 2015-04-27. Addressing a dynamic aspect of organic chemistry, this book describes synthetic strategies and applications for multicomponent reactions, including key routes for synthesizing complex molecules. Illustrates the crucial role and the important utility of multicomponent reactions (MCRs) to organic syntheses. Compiles novel and efficient synthetic multicomponent procedures to give readers a complete picture of this class of organic reactions. Helps readers to design efficient and practical transformations using multicomponent reaction strategies. Describes reaction background, applications to synthesize complex molecules and drugs, and reaction mechanisms.

Modern Nucleophilic Aromatic Substitution Francois Terrier, 2013-05-20. This book provides a comprehensive overview of nucleophilic aromatic substitutions, focusing on the mechanistic and synthetic features that govern these reactions. The first chapter presents a detailed mechanistic analysis of the factors determining the feasibility of S_NAr substitutions, providing decisive information to predict regioselectivity of many reactions and to define the conditions for concerted S_NAr processes. Reflecting the key role played by these species as intermediates in most S_NAr reactions, chapter 2 then discusses the chemistry of anionic sigma complexes. Chapter 3 describes the concept of superelectrophilicity in S_NAr substitutions as it has recently emerged from the reactivity of strongly electron deficient aromatic and heteroaromatic structures. The numerous synthetic applications are considered in depth in the chapters 4 and 5 that follow on intermolecular and intramolecular nucleophilic aromatic substitutions. Then chapter 6 focuses on substitutions proceeding formally through displacement of a hydride ion, a hot topic in the field. The final chapter brings together concise yet comprehensive discussions surrounding S_NAr phot substitutions, radical substitutions and ANRORC substitutions. Authored by a highly respected chemist who has

contributed greatly to the field over the past two decades this is a valuable information source for all organic chemists working in academia or the pharmaceutical and agrochemical industries *Current Organic Chemistry* ,2007 Provides in depth reviews on current progress in the fields of asymmetric synthesis organometallic chemistry bioorganic chemistry heterocyclic chemistry natural product chemistry and analytical methods in organic chemistry Each issue is edited by an appointed Executive Guest Editor Polish Journal of Chemistry ,2007
