Laurence R. Harris, Laurence Harris, Michael Jenkin, 1998-10-13 This book is about the two way interplay between vision and action Vision acts to guide and control actions But vision also obtains a lot of information about the world by virtue of these actions for example by moving round an object to obtain successive views This becomes a reiterative process and it is this that is the focus of this volume This book contains contributions from scientists who are leaders in each of the several facets of the subject Examples of the types of action considered vary from moving the eyes and head and body as in looking around or walking to complex actions such as driving a car or playing table tennis **The Harlequin's Dance** David

Rain, 2015-11-19 The god Orok gave to his five children crystals to be embedded in a circle on the Rock of Being and Unbeing whence had sprung the gods the earth and all its peoples This circle known as The Orokon ensured the harmony of life until the dark god Koros plucked his crystal from the Rock and plunged the whole world into chaos and despair In the village of Irion the crippled boy known as Jemany Vexing lives with his dying mother and his fanatical Aunt Umbecca Unable to walk Jem is condemned to a wretched half life until he meets a mysterious dwarf With his new strength comes a new friendship with the wild girl Catayane as the horrors of the Bluejacket regime the faction that overthrew the true king begin Jem becomes aware of his greater destiny to find and reunite the five crystals of the Orokon But he is not the only seeker

Lovett, 2004-09-15 The International Conference on Cognitive Modeling brings together researchers who develop computational models to explain and predict cognitive data The core theme of the 2004 conference was Integrating Computational Models encompassing an integration of diverse data through models of coherent phenomena integration across modeling approaches and integration of teaching and modeling This text presents the proceedings of that conference The International Conference on Cognitive Modeling 2004 sought to grow the discipline of computational cognitive modeling by providing a sophisticated modeling audience for cutting edge researchers in addition to offering a forum for integrating insights across alternative modeling approaches in both basic research and applied settings and a venue for planning the future growth of the discipline The meeting included a careful peer review process of 6 page paper submissions poster abstracts to include late breaking work in the area prizes for best papers a doctoral consortium and competitive modeling symposia that compare and contrast different approaches to the same phenomena

Looking and Acting Michael Land, Benjamin Tatler, 2009-07-30 The human visual system is amazing in its ability to guide us in a diverse range of everyday tasks driving preparing food reading in addition to leisurely pursuits such as ball games or reading music Somehow without conscious effort our eyes find the information we need to negotiate the world around us Only recently however has it become possible to explore just how it is that our eyes can supply the brain systems controlling our limbs with the information they need to carry out these tasks Thanks to the development of head mounted eye trackers we can now explore the strategies that the eye movement system uses in the the initiation and guidance of action Looking and Acting explores a wide variety of visually guided activities from sedentary activities such as reading music or drawing to dynamic behaviours such as driving or playing cricket It proposes that the eye movement system has its own store of knowledge about where to find the most appropriate information for guiding action information not often available to conscious scrutiny Thus every action has its own specific repertoire of linked eye movements The book starts with a brief background of eye movement studies Part two reviews observations and analyses of different activities Finally the book looks at visual representations the neurophysiology of the brain systems involved and the roles of attention and learning Opening up a whole new field in eye movement research the fascinating new book will be of great interest to all vision scientists psychologists physiologists ophthalmologists whether at professional graduate or advanced undergraduate levels

Dynamic Vision for Perception and Control of Motion Ernst Dieter Dickmanns, 2007-06-02 The application of machine vision to autonomous vehicles is an increasingly important area of research with exciting applications in industry defense and transportation likely in coming decades Dynamic Vision for Perception and Control of Motion has been written

by the world's leading expert on autonomous road following vehicles and brings together twenty years of innovation in the field by Professor Dickmanns and his colleagues at the German Armed Forces university in Munich. The book uniquely details an approach to real time machine vision for the understanding of dynamic scenes viewed from a moving platform that begins with spatio-temporal representations of motion for hypothesized objects whose parameters are adjusted by well known prediction error feedback and recursive estimation techniques. A coherent and up to date coverage of the subject matter is presented with the machine vision and control aspects detailed along with reports on the mission performance the first vehicles using these innovative techniques built at Munich. Pointers to the future development and likely applications of this hugely important field of research are presented. Dynamic Vision for Perception and Control of Motion will be a key reference for technologists working in autonomous vehicles and mobile robotics in general who wish to access the leading research in this field as well as researchers and students working in machine vision and dynamic control interested in one of the most interesting and promising applications of these techniques.

Mad Boy Nick Arvin, 2018-06-12 Colorado Book Award Winner for Literary Fiction. The colorful characters make this account of the War of 1812 a rollicking page turner. Publishers Weekly. In the early nineteenth century young Henry Phipps is on a quest to realize his dying mother's last wish to be buried at sea surrounded by her family. Not an easy task considering Henry's never do well father is in debtors prison and his comically earnest older brother is busy fighting the redcoats on the battlefields of Maryland. But Henry's stubborn determination knows no bounds. As he dodges the cannon fire of clashing armies and picks among the ruins of a burning capital he meets looters, British defectors, renegade slaves, a pregnant maiden in distress and scoundrels of all types. Mad Boy is at once an antic adventure and a thoroughly convincing work of historical fiction that recreates a young nation's first truly international conflict and a key moment in the history of the emancipation of African American slaves. Entertaining, atmospheric and touching it is a wartime coming of age story filled with nonstop action and genuine pathos. Kirkus Reviews starred review. This brilliant musket blast of a novel in which the lucky reader will encounter falling cows, repurposed pickle barrels, fascinating schemes and fabulous schemers is alive with humor, heat and heart. Mad Boy is a tremendous accomplishment. Nick Arvin is the real thing. Laird Hunt, author of Neverhome.

The First Days (As the World Dies, Book One) Rhiannon Frater, 2012-10-30. A lawyer Katie and a housewife Jenni are thrown together by circumstance and find themselves fleeing for their lives when a horde of zombies takes over the world.
