Simulation-Based Algorithms for Markov Decision Processes

Hyeong Soo Chang, Jiaqiao Hu, Michael C. Fu, Steven I. Marcus, 2013-02-26 Markov decision process MDP models are widely used for modeling sequential decision making problems that arise in engineering economics computer science and the social sciences Many real world problems modeled by MDPs have huge state and or action spaces giving an opening to the curse of dimensionality and so making practical solution of the resulting models intractable In other cases the system of interest is too complex to allow explicit specification of some of the MDP model parameters but simulation samples are readily available e g for random transitions and costs For these settings various sampling and population based algorithms have been developed to overcome the difficulties of computing an optimal solution in terms of a policy and or value function Specific approaches include adaptive sampling evolutionary policy iteration evolutionary random policy search and model reference adaptive search This substantially enlarged new edition reflects the latest developments in novel algorithms and their underpinning theories and presents an updated account of the topics that have emerged since the publication of the first edition Includes innovative material on MDPs both in constrained settings and with uncertain transition properties game theoretic method for solving MDPs theories for developing roll out based algorithms and details of approximation stochastic annealing a population based on line simulation based algorithm The self contained approach of this book will appeal not only to researchers in MDPs stochastic modeling and control and simulation but will be a valuable source of tuition and reference for students of control and operations research

Continuous-Time Markov Decision Processes Alexey Piunovskiy, Yi Zhang, 2020-11-09 This book offers a systematic and rigorous treatment of continuous time Markov decision processes covering both theory and possible applications to queueing systems epidemiology finance and other fields Unlike most books on the subject much attention is paid to problems with functional constraints and the realizability of strategies Three major methods of investigations are presented based on dynamic programming linear programming and reduction to discrete time

problems Although the main focus is on models with total discounted or undiscounted cost criteria models with average cost criteria and with impulsive controls are also discussed in depth The book is self contained A separate chapter is devoted to Markov pure jump processes and the appendices collect the requisite background on real analysis and applied probability All the statements in the main text are proved in detail Researchers and graduate students in applied probability operational research statistics and engineering will find this monograph interesting useful and valuable **Control of Spatially**

Markov Decision Processes with Applications to Finance Nicole Bäuerle, Ulrich Rieder, 2011-06-06 The theory of Markov decision processes focuses on controlled Markov chains in discrete time The authors establish the theory for general state and action spaces and at the same time show its application by means of numerous examples mostly taken from the fields of finance and operations research By using a structural approach many technicalities concerning measure theory are avoided They cover problems with finite and infinite horizons as well as partially observable Markov decision processes piecewise deterministic Markov decision processes and stopping problems The book presents Markov decision processes in action and includes various state of the art applications with a particular view towards finance It is useful for upper level undergraduates Master s students and researchers in both applied probability and finance and provides exercises without solutions

Continuous-Time Markov Decision Processes Xianping Guo, Onésimo Hernández-Lerma, 2009-09-18 Continuous time Markov decision processes MDPs also known as controlled Markov chains are used for modeling decision making problems that arise in operations research for instance inventory manufacturing and queueing systems computer science communications engineering control of populations such as fisheries and epidemics and management science among many other fields This volume provides a unified systematic self contained presentation of recent developments on the theory and applications of continuous time MDPs The MDPs in this volume include most of the cases that arise in applications because they allow unbounded transition and reward cost rates Much of the material appears for the first time in book form
