**Information Service**, 1967 **Beyond the simple contrastive analysis: Appropriate experimental approaches for unraveling the neural basis of conscious experience** Jaan Aru, Talis Bachmann, 2015-06-26 Contrasting conditions with and without conscious experience has served consciousness research well However research based on this simple contrast has led to controversies about the neural basis of conscious experience One key reason for these ongoing debates seems to be that the simple contrast between conditions with and without consciousness is not specific for unraveling the neural basis of conscious experience but rather also leads to other processes that precede or follow it Acknowledging this methodological problem implies that some of the previous research findings about the neural underpinnings of conscious experience are actually reflecting the prerequisites and consequences rather than the direct correlates of conscious perception Thus it is required to re evaluate the previous results to find out which of them are telling us anything about the neural basis of consciousness But first and foremost to overcome this methodological problem we need new experimental paradigms that go beyond the simple contrastive analysis or find the ways how some older but well forgotten paradigms may foster a new look at this emerging problem Accordingly this research topic is looking for empirical and theoretical contributions that 1 envision new and suitable experimental approaches to study consciousness that are free from the limitations of the simple contrastive analysis 2 provide empirical data that help to separate the neural correlates of conscious experience from the prerequisites and consequences of it 3 help to re assess previous research findings about the neural correlates of conscious perception in the light of the methodological problems with the traditional contrastive analysis We hope that the theoretical insights and experimental approaches collected within this Research Topic help us to gain a more refined understanding of the neural basis of conscious experience Seventeenth Century Practical Mathematics Paul Hughes, 2021-09-28 This exciting Greenville Collins biography is about seventeenth century navigation focusing for the first time on mathematics practised at sea This monograph argues the Restoration kings Charles II and James II promotion of cartography for both strategy and trade It is aimed at the academic cartographic and larger market of marine enthusiasts Through shipwreck and Arctic marooning and Dutch and Spanish charts Collins evolved a Prime Meridian running through Charles s capital After John Ogilby s successful Britannia Charles set Collins surveying his kingdom s coasts and James set John Adair surveying in Scotland They triangulated at sea Subsequently Collins persuaded James to sustain his dead brother s ambition This the British coast s first survey took six years After James s flight and William III s invasion Collins lead the royal yacht squadron for six years more garnering funds to publish Great Britain s Coasting Pilot The Admiralty and civic institutions subsidised what became his own pilot Collins aided Royal Society members in their investigations and his new guide remained vital to navigators through the century following Charles s cartographic promotion bloomed the most spectacularly in the atlases of
