## STEP 1 REPORTING

Reporting allows for a strategic and operational depiction of a company's sustainability journey. It is periodic, transparent and balanced; it clearly records the achievements and challenges that a company faces. Both qualitative and quantitative data across the company and supply chain are collected and disclosed as proof of the company's progress.

### What can companies do with the sustainability report?

1. Strategise and execute business decisions based on the purpose and impact of ESG factors on and by the company
2. Track the progress of sustainability initiatives and collect data
3. Identify opportunities for the company to be relevant in the future sustainable economy
4. Assess and manage risks in the transition and steady-state sustainable economy
5. Communicate consistent, transparent and meaningful updates on sustainability to stakeholders, both internally and externally

### Sustainability reporting is a process, not an end goal

- Conduct the sustainability reporting process with the same diligence as preparing financial reporting
- Pre-fiscal year planning and forecasting
- Fiscal year tracking and achieving
- Post-fiscal year data gathering, validating, analysing and reporting

## STEP 2 STORYTELLING

Sustainability empowers companies to have a story or brand that is purposeful. It describes how the company meets a need in society and this forms the personality and image of the brand. Of course, caution is to be exercised against greenwashing red flags.

### Communicate authentically

**Green marketing:** Promotion of products and services based on their environmental or social benefits

**Greenwashing:** Intentional or erroneous marketing that claims that a company's products, services, policies or goals are more environmentally or socially beneficial than they actually are

### 1. Help the company create a strong business case

Link sustainability efforts to company strategy and performance and prepare supporting information

### 2. Create learning opportunities

Increase the company's exposure to sustainability learning platforms and experiential opportunities

### 3. Leverage the interest of key stakeholders

Consistently highlight the sustainability interest of stakeholders like customers, suppliers and regulators

### 4. Create opportunities for public commitments

Create a strong sustainability brand story that supports the company's public commitments

### 5. Secure opportunities for recognition and leadership

Identify market and industry opportunities for recognition of the company's sustainability efforts

Sustainability and the U.S. EPA National Research Council,Policy and Global Affairs,Science and Technology for Sustainability Program,Committee on Incorporating Sustainability in the U.S. Environmental Protection Agency,2011-10-08 Sustainability is based on a simple and long recognized factual premise Everything that humans require for their survival and well being depends directly or indirectly on the natural environment The environment provides the air we breathe the water we drink and the food we eat Recognizing the importance of sustainability to its work the U S Environmental Protection Agency EPA has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision making at the agency To further strengthen the scientific basis for sustainability as it applies to human health and environmental protection the EPA asked the National Research Council NRC to provide a framework for incorporating sustainability into the EPA s principles and decision making This framework Sustainability and the U S EPA provides recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s Although risk based methods have led to many successes and remain important tools the report concludes that they are not adequate to address many of the complex problems that put current and future generations at risk such as depletion of natural resources climate change and loss of biodiversity Moreover sophisticated tools are increasingly available to address cross cutting complex and challenging issues that go beyond risk management The report recommends that EPA formally adopt as its sustainability paradigm the widely used three pillars approach which means considering the environmental social and economic impacts of an action or decision Health should be expressly included in the social pillar EPA should also articulate its vision for

sustainability and develop a set of sustainability principles that would underlie all agency policies and programs
