Giarrusso, G Trombetti, S Matarasso, 1996-05-15 This Research Note collects reports of the invited plenary addresses given during the conference Elliptic and Parabolic Partial Differential Equations and Applications held in Capri Italy 19 23 September 1994 The conference was devoted to new developments in partial differential equations of elliptic and parabolic type and to their applications in various fields **Recent Advances in Differential Equations** H-H Dai, P.L.

Sachdev, 2020-01-30 The First Pan China Conference on Differential Equations was held in Kunming China in June of 1997 Researchers from around the world attended including representatives from the US Canada and the Netherlands but the majority of the speakers hailed from China and Hong Kong This volume contains the plenary lectures and invited talks presented at that conference and provides an excellent view of the research on differential equations being carried out in China Most of the subjects addressed arose from actual applications and cover ordinary and partial differential equations Topics include **Classical and Quantic Periodic Motions of Multiply Polarized Spin-Particles** Abbas

Bahri, 1997-11-28 The author of this volume defines a diffusion flow for a variational problem lacking completeness related to the geometry of a contact form α and a vector field u in its kernel He analyzes the ends of the flow lines and finds them to be of two types one involving periodic orbits of the Reeb Hamiltonian vector field x and the other where asymptotes occur In the most general case these turn out to be periodic motions for x up to quantic jumps of a very special type along u He shows that the mathematical results and the physical interpretation fit and provide new points of view useful in the foundations of quantum mechanics Complex Analysis and Geometry Vincenzo Ancona, Edoardo Ballico, Rosa M Miro-Roig, Alessandro

Silva, 1997-04-27 Based on two conferences held in Trento Italy this volume contains 13 research papers and two survey papers on complex analysis and complex algebraic geometry The main topics addressed by these leading researchers include

Mori theory polynomial hull vector bundles q convexity Lie groups and actions on complex spaces hypercomplex structures pseudoconvex domains projective varieties Peer reviewed and extensively referenced Complex Analysis and Geometry contains recent advances and important research results It also details several problems that remain open the resolution of which could further advance the field **Integral Representations For Spatial Models of Mathematical Physics** Vladislav V Kravchenko, Michael Shapiro, 2020-11-25 This book provides a new mathematical theory for the treatment of an ample series of spatial problems of electrodynamics particle physics quantum mechanics and elasticity theory This technique proves to be as powerful for solving the spatial problems of mathematical physics as complex analysis is for solving planar problems The main analytic tool of the book a non harmonic version of hypercomplex analysis recently developed by the authors is presented in detail There are given applications of this theory to the boundary value problems of electrodynamics and elasticity theory as well as to the problem of quark confinement A new approach to the linearization of special classes of the self duality equation is also considered Detailed proofs are given throughout The book contains an extensive bibliography on closely related topics This book will be of particular interest to academic and professional specialists and students in mathematics and physics who are interested in integral representations for partial differential equations The book is self contained and could be used as a main reference for special course seminars on the subject **Linear Theory of**

Colombeau Generalized Functions M Nedeljkov, S Pilipovic, D Scarpalezos, 1998-05-20 Results from the now classical distribution theory involving convolution and Fourier transformation are extended to cater for Colombeau's generalized functions Indications are given how these particular generalized functions can be used to investigate linear equations and pseudo differential operators Furthermore applications are also given to problems with nonregular data **Complex**

Analysis, Harmonic Analysis and Applications Robert Deville, J Esterle, V Petkov, A Sebbar, A Yger, 1996-04-30

Multivariable complex analysis and harmonic analysis provide efficient techniques to study many applied mathematical problems The main objective of a conference held in Bordeaux in June 1995 in honour of Professor Roger Gay was to connect these mathematical fields with some of their applications This was also the guideline for the fourteen contributions collected in this volume Besides presenting new results each speaker made a substantial effort in order to present an up to date survey of his field of research All the subjects presented here are very active domains of research integral geometry with its relation to X ray tomography classical harmonic analysis and orthogonal polynomials pluricomplex potential theory with its deep connection with polynomial approximation complex analytic methods in the theory of partial differentiable operators with constant coefficients in the spirit of those initiated by Leon Ehrenpreis Calderon Zygmund operators and nonlinear operators oscillatory integrals and resonance and finally multivariable residue theory in its most recent developments It is hoped that the reader will find enough insight in the different survey papers presented here to become involved with one of these subjects or to pursue further applications **Backward Stochastic Differential Equations** N El Karoui, Laurent

Mazliak,1997-01-17 This book presents the texts of seminars presented during the years 1995 and 1996 at the Universit Paris VI and is the first attempt to present a survey on this subject Starting from the classical conditions for existence and unicity of a solution in the most simple case which requires more than basic stochartic calculus several refinements on the hypotheses are introduced to obtain more general results **Integral Expansions Related to Mehler-Fock Type**

Transforms B N Mandal,Nanigopal Mandal,2020-11-25 An important class of integral expansions generated by Sturm Liouville theory involving spherical harmonics is commonly known as Mehler Fock integral transforms In this book a number of integral expansions of such type have been established rigorously As applications integral expansions of some simple function are also obtained *Rings and Radicals* R. Necas,1996-08-01 This volume consists of four contributions that are based on a series of lectures delivered by Jens Frehse Konstantin Pikeckas K R Rajagopal and Wolf von Wahl t the Fourth Winter School in Mathematical Theory in Fluid Mechanics held in Paseky Czech Republic from December 3 9 1995 In these papers the authors present the latest research and updated surveys of relevant topics in the various areas of theoretical fluid mechanics Specifically Frehse and Ruzicka study the question of the existence of a regular solution to Navier Stokes equations in five dimensions by means of weighted estimates Pileckas surveys recent results regarding the solvability of the Stokes and Navier Stokes system in domains with outlets at infinity K R Rajagopal presents an introduction to a continuum approach to mixture theory with the emphasis on the constitutive equation boundary conditions and moving singular surface Finally Kaiser and von Wahl bring new results on stability of basic flow for the Taylor Couette problem in the small gap limit This volume would be indicated for those in the fields of applied mathematicians researchers in fluid mechanics and theoretical mechanics and mechanical engineers

General Theory of Partial Differential Equations and Microlocal Analysis Min-You Qi,L Rodino,1996-05-20 Lectures on Bifurcations, Dynamics and Symmetry Michael J. Field,2020-02-17 This book is an expanded version of a Master Class on the symmetric bifurcation theory of differential equations given by the author at the University of Twente in 1995 The notes cover a wide range of recent results in the subject and focus on the dynamics that can appear in the generic bifurcation theory of symmetric differential equations This text covers a wide range of current results in the subject of bifurcations dynamics and symmetry The style and format of the original lectures has largely been maintained and the notes include over 70 exercises **Topics in Pseudo-Differential Operators** S D Zaidman,1996-10-29 This Research Note presents in a clear and detailed manner a certain group of results pertaining to some variants extensions and generalizations on the theory of pseudo differential operators as introduced in the pioneering work of Kohn Nirenberg The author presents a discussion of concepts of order true order and asymptotic expansions for general linear operators in some vector spaces following a pattern appearing in pseudo differential operator theory The book is intended mainly for an audience of operator theorists at

a fairly elementary level its main objective a unitary presentation of articles written by the author over a number of years

The Theory of Quantaloids K I Rosenthal, 2014-07-22 This book presents a detailed account of the theory of quantaloids a natural generalization of quantales The basic theory examples and construction are given and particular emphasis is placed on the free quantaloid construction as well as on the perspective provided by enriched categories
