Rangeland Monitoring, 1984 **Ecological Planning** Forster Ndubisi, 2003-04-30 Chosen by Choice Magazine as an Outstanding Academic Title for 2003 Ecological planning is the process of understanding evaluating and providing options for the use of landscape to ensure a better fit with human habitation In this ambitious analysis Forster Ndubisi provides a succinct historical and comparative account of the various approaches to this process He then reveals how each of these approaches offers different and uniquely useful perspectives for understanding the dialogue between human and environmental processes Ndubisi begins by examining the philosophies behind and major contributors to ecological thinking during the past 150 years as well as the paradigm shift in planning that occurred in recent decades as a result of a growing global ecological awareness He then turns to landscape suitability

analysis and discusses alternative approaches to ecological planning such as applied human ecology applied landscape ecology and others Finally he offers a comparative synthesis of the approaches in order to reveal the theoretical and methodological assumptions inherent when planners choose one approach over the other Ndubisi concludes that no one approach can by itself adequately address the whole spectrum of ecological planning issues For this reason he offers guidance as to when it may be appropriate for landscape architects and planners to emphasize one approach rather than another

Methods of Environmental Impact Assessment , Monitoring Ecosystems David E. Busch, Often a commitment to large ecosystem initiatives is linked both conceptually and legally with requirements for ecological monitoring as a means of evaluating the effectiveness of management actions Programs to determine ecosystem status and trends can contribute significantly to the resolution of difficult and contentious management questions and can play a key role both in sharpening the focus of research questions and in developing adaptive approaches to resource management Monitoring Ecosystems brings together leading scientists and researchers to offer a groundbreaking synthesis of lessons learned about ecological monitoring in major ecoregional initiatives around the United States Contributors Donald L DeAngelis Lance H Gunderson Barry R Noon John C Ogden Craig J Palmer Keith M Reynolds Paul L Ringold John R Sauer Lawrence E Stevens and many others present insights and experiences gained from their work in designing developing and implementing comprehensive ecosystem monitoring programs in the Pacific Northwest the lower Colorado River Basin and the Florida Everglades The book outlines the conceptual and scientific underpinnings for regional scale ecosystem monitoring examines the role and importance of data management modeling and integrative analyses considers techniques for and experience with monitoring habitats populations and communities Chapters by the editors synthesize and expand on points made throughout the volume and present recommendations for establishing frameworks for monitoring across scales from local to international Monitoring Ecosystems presents a critical examination of the lessons learned from direct experience along with generalized conclusions that can be applied to monitoring programs in the United States and around the world It is a vital contribution to science based monitoring efforts that will allow those responsible for developing and implementing ecoregional initiatives to make use of knowledge gained in previous efforts enabling them to focus their energies on system specific questions and problems
