*Introduction to the Primates* Daris R. Swindler, 2012-09-20 Introduction to the Primates is a comprehensive but compact guide to the long evolutionary history of the world's prosimians monkeys and apes and to the much shorter history of humankind's interactions with them from our earliest recorded observations to the severe threats we now pose to their survival Daris Swindler provides a detailed description of the major primate groups and their environments from the smallest lemurs of Madagascar to the gorillas of central Africa He compares and contrasts the primate species looking at each with a specific anatomical focus The range of diversity emerges as the particular characteristics of the species becomes increasingly distinct Swindler also considers primate behavior and its close connections with environment and evolutionary differences His account of 65 million years of successful adaptation and evolution demonstrates the drama of paleontology as evidence accrues and gaps in the history of primate evolution gradually close **National Library of Medicine Current Catalog**

**Portrait of Humankind** Paul Driben, Harvey H. Herstein, 1994      *The Mental Life of Monkeys and Apes: A Study of Ideational Behavior* Robert Mearns Yerkes, 2019-12-02 In *The Mental Life of Monkeys and Apes: A Study of Ideational Behavior* Robert Mearns Yerkes explores the cognitive processes and social behaviors of primates employing a rigorous scientific approach combined with anecdotal observations. The book delves into the ideational behavior of these species, scrutinizing their problem-solving abilities, communication, and emotional responses, all while challenging prevailing notions of animal mentality in the early 20th century. Yerkes's literary style is characterized by precise language and an empirical foundation, reflecting the burgeoning fields of psychology and ethology during its publication in 1916, a time when the study of animal behavior was gaining significant traction among scientists. Robert Mearns Yerkes, a prominent American psychologist and one of the founders of comparative psychology, utilized his extensive background in psychology and animal behavior to compose this pivotal work. His experiences studying animals in natural settings and in controlled environments greatly informed his insights into the cognitive capacities shared between humans and our closest relatives in the animal kingdom. Yerkes's influential position within the American Psychological Association further underscores his commitment to advancing our understanding of mental life across species. This book is an essential read for students and professionals in psychology, anthropology, and zoology alike. Yerkes's meticulous observations provide invaluable perspectives on the continuity of mental processes across species, inviting readers to reconsider the emotional and intellectual lives of primates. Engaging with this text shall deepen one's appreciation of animals as complex thinking beings deserving of our empathy and understanding.      *Folia Primatologica*, 2008      *Anthropology For Dummies* Cameron M. Smith, 2009-02-23 Covers the latest competing theories in the field. Get a handle on the fundamentals of biological and cultural anthropology. When did the first civilizations arise? How to find a career in anthropology.      *Human, Apes and Chinese Fossils* Charles E. Oxnard, 1985-09-01 *Human Apes and Chinese Fossils: New Implications for Human Evolution*. The series will cover all disciplines concomitant to full University studies.      **Human Evolution** Bernard Campbell, 2017-09-04 In this new fourth edition, Campbell has revised and updated his classic introduction to the field. *Human Evolution* synthesizes the major findings of modern research and theory and presents a complete and integrated account of the evolution of human beings. New developments in microbiology and recent fossil records are incorporated into the enormous range of this volume, with the resulting text as lucid and comprehensive as earlier editions. The fourth edition retains the thematic structure and organization of the third, with its cogent treatment of

human variability and speciation primate locomotion and nonverbal communication and the evolution of language supported by more than 150 detailed illustrations and an expanded and updated glossary and bibliography As in prior editions the book treats evolution as a concomitant development of the main behavioral and functional complexes of the genus Homo among them motor control and locomotion mastication and digestion the senses and reproduction It analyzes each complex in terms of its changing function and continually stresses how the separate complexes evolve interdependently over the long course of the human journey All these aspects are placed within the context of contemporary evolutionary and genetic theory analyses of the varied extensions of the fossil record and contemporary primatology and comparative morphology The result is a primary text for undergraduate and graduate courses one that will also serve as required reading for anthropologists biologists and nonspecialists with an interest in human evolution
