Survey Of The Biotransformations Of Drugs And Chemicals In Animals:

Biotransformations: A Survey of the Biotransformations of Drugs and Chemicals in Animals D.R. Hawkins, 1996-12-31
Now in its seventh outstanding volume *Biotransformations* has become established as a unique and important source for those involved in the discovery and development of new compounds. It broadly covers the scientific literature for the period 1987 to 1994. The series provides a complete survey of the biotransformations in vertebrates of the following: Pharmaceuticals, agrochemicals, food additives, environmental chemicals, industrial chemicals. *Biotransformations* provides a ready way of accessing information on the known pathways for the biotransformation of structurally related compounds. Key functional groups provide an index related procedure for retrieving information on compounds of interest. A further index allows the retrieval of examples of specific biochemical reactions which may have wider application. Each volume corresponds roughly with the scientific literature published during a calendar year. Each volume contains a review chapter which discusses examples of novel biotransformations, species differences, stereochemical aspects and mechanisms of toxicity associated with specific biotransformations.

Introduction to Food Toxicology Takayuki Shibamoto, Leonard F. Bjeldanes, 2012-12-02

The area of food toxicology currently has a high profile of interest in the food industry universities and government agencies and is certainly of great concern to consumers There are many books which cover selected toxins in foods such as plant toxins mycotoxins pesticides or heavy metals but this book represents the first pedagogic treatment of the entire range of toxic compounds found naturally in foods or introduced by industrial contamination or food processing methods Featuring coverage of areas of vital concern to consumers such as toxicological implications of food adulteration as seen in ethylene glycol in wines or the Spanish olive oil disaster or pesticide residues Introduction to Food Toxicology will be of interest to students in toxicology environmental studies and dietetics as well as anyone interested in food sources and public health issues The number of students who are interested in toxicology has increased dramatically in the past several years Issues related to toxic materials have received more and more attention from the public The issues and potential problems are reported almost daily by the mass media including television newspapers and magazines Major misunderstandings and confusion raised by those reports are generally due to lack of basic knowledge about toxicology among consumers This textbook provides the basic principles of food toxicology in order to help the general public better understand the real problems of toxic materials in foods Principles of toxicology Toxicities of chemicals found in foods Occurrence of natural toxins in plant and animal foodstuffs Food contamination caused by industry Toxic chemicals related to food processing Food additives Microbial toxins in foods
