Mani Monto, L. S. Ganesh, and Koshy Varghese. *Sustainability and Human Settlements: Fundamental Issues, Modeling and Simulations*. New Delhi, India: Sage, 2005.

DOI: 10.1177/1086026607302161

By 2050, the human population is projected to reach a population size between 7.6 and 10.6 billion (United Nations, 2005). This dramatic increase in the human population will place a tremendous burden on the Earth's social and ecological systems. In 2007, more than half of the human population is expected to live in urban areas, the first time in history that more humans have lived in cities versus rural settlements (United Nations, 2004). In response to this increasing pressure, many have called for real-world approaches to achieving sustainability, particularly in urban landscapes. Monto et al. contend that the lack of consensus over the definition, operational goals, and objectives of sustainable development will make implementation of sustainability difficult. The objectives of their new book are to (a) consolidate and present concepts, principles, and perspectives regarding sustainability; (b) guide development of models for large systems such as cities and other human settlements; (c) demonstrate the use of models for policy development; and (d) encourage more research into sustainable development and decision support tools for sustainability. The authors address a critical question in this timely book: How do we assess and forecast the sustainability of human settlements?

Monto et al. provide a useful overview of the pertinent issues surrounding sustainability and human settlements in the first two chapters. There has been much debate on the definition and concept of sustainable development (Lele, 1991). The authors effectively characterize the difficulties that arise from the various perceptions of sustainable development. In addition, they detail the evolution of the concept from the publication of *Our Common Future* (World Commission on Environment and Development, 1987) to recent times and the shifting focus between economic and environmental sustainability. The clearest communication of those concepts necessary to any discussion of sustainability comes at the end of the first chapter. Here, the authors state the goals of the three pillars of sustainability (i.e., environment, economy, and society) and attempt to extract commonality from the myriad definitions of sustainable development currently in use. They assert a common goal should ally all definitions of sustainability: to maintain and support human development. In other words, Monto et al. suggest sustainability must focus on humans and their quality of life. Those in environmental sciences may disagree (as I did initially), contending that sustainability focuses on human development *and* the ecosystems on which humans rely. However, the authors take extra strides to explain that they are using the term *development* to encompass all aspects of human settlements, from culture and economics to components of the built and natural environment. It is unclear whether this broadening of the term will ultimately be useful. However, by compiling the many definitions, indicators, and principles of sustainable development, the authors provide a valuable resource for anyone making their first foray
