Sustained Attention In Human Performance:

Sustained Attention in Human Performance Joel S. Warm, 1984-12-12 A detailed and critical treatment of research in sustained attention or vigilance by specialists in each sub area Provides a thorough overview of the area with many suggestions for future research Extensively reviews the difficult problems in real world applications in areas such as quality control air traffic control and nuclear power plant regulation Includes an extensive bibliography

Performance Under Stress James Szalma, Peter A Hancock, 2018-10-09 The world is a dangerous place and recent events have served to make it less safe There are many arenas of conflict and even combat across the world Such situations are the quintessential expression of stress you stand in imminent danger and live with the knowledge that you may be attacked injured or even killed at any moment How do people perform under these conditions How do they keep a heightened level of vigilance when nothing may happen in their immediate location for weeks or even months What happens when the bullets actually start flying How is it you distinguish friend from foe and each from innocent bystanders when in immediate peril of your life Can we design technology to help people make good decisions in these ultimately hazardous situations To what degree does your membership in a team act to dissipate these particular effects Can we generate sufficiently stressful field exercises to simulate these conditions and can we train and or select those most able to withstand such adverse conditions How will the next generation of servicemen deal with these inherent problems These are the sorts of questions that Performance Under Stress addresses This book is derived largely from a multiple year multiple university initiative MURI on stress and soldier performance on the modern electronic battlefield It involved leading researchers from many institutions who have brought their individual expertise to bear on these crucial contemporary concerns United by a common research framework these groups attacked the issue from different methodological and conceptual approaches ranging from traditional laboratory modeling and experimentation to realistic simulations from involved field exercises to personal experiences of actual combat conditions The insights generated have been distilled and presented as a benchmark of current understanding and provide future directions for research in this arena Although this work focuses on soldier stress and soldier performance the principles that are derived extend well beyond this single application Their findings can be applied to people facing the demands of the business world or research as much as to those who meet life or death situations such as homeland security first responders and law enforcement personnel

Human Performance, Situation Awareness, and Automation Dennis A. Vincenzi, Mustapha Mouloua, Peter A. Hancock, 2005-01-06 In 2000 the Conference on Automation joined forces with a partner group on situation awareness SA The rising complexity of systems demands that one can be aware of a large range of environmental and task based stimulation in order to match what is done with what has to be done Thus SA and automation based interaction fall naturally together and this conference is the second embodiment of this union Moving into the 21st

century further diversification of the applications of automation will continue for example the revolution in genetic technology Given the broad nature of this form of human machine interaction it is vital to apply past lessons to map a future for the symbiotic relationship between humans and the artifacts they create It is as part of this ongoing endeavor that the present volume is offered

Automation and Human Performance Raja Parasuraman, Mustapha Mouloua, 2018-01-29

There is perhaps no facet of modern society where the influence of computer automation has not been felt Flight management systems for pilots diagnostic and surgical aids for physicians navigational displays for drivers and decision aiding systems for air traffic controllers represent only a few of the numerous domains in which powerful new automation technologies have been introduced The benefits that have been reaped from this technological revolution have been many At the same time automation has not always worked as planned by designers and many problems have arisen from minor inefficiencies of operation to large scale catastrophic accidents Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient The influence of automation technology on human performance has often been investigated in a fragmentary isolated manner with investigators conducting disconnected studies in different domains There has been little contact between these endeavors although principles gleaned from one domain may have implications for another Also with a few exceptions the research has tended to be empirical and only theory driven In recent years however various groups of investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology This book presents the current theories and assesses the impact of automation on different aspects of human performance Both basic and applied research is presented to highlight the general principles of human computer interaction in several domains where automation technologies are widely implemented The major premise is that a broad based theory driven approach will have significant implications for the effective design of both current and future automation technologies This volume will be of considerable value to researchers in human

Human Performance provides the student and researcher with a comprehensive and accessible review of performance in the real world and essential cognitive science theory Four main sections cover both theoretical and practical issues Section One outlines the perspectives on performance offered by contemporary cognitive science including information processing and neuroscience perspectives Section Two presents a multi level view of the performer as biological organism information processor and intentional agent It reviews the development of the cognitive theory of performance through experimental studies and also looks at practical issues such as human error Section Three reviews the impact of stress factors such as noise fatigue and illness on performance Section Four assesses individual and group differences in performance with accounts of ability personality and aging

Advances in Understanding Human Performance Tadeusz Marek, Waldemar Karwowski, Valerie Rice, 2010-06-21

Combining emerging concepts theories and

applications of human factors knowledge this volume focuses on discovery and understanding of human performance issues in complex systems including recent advances in neural basis of human behavior at work i.e. neuroergonomics training and universal design The book is organized into ten sections that

Christopher D. Wickens, Jason S. McCarley, 2019-03-04 Eye witness testimony training driving and display design these are just a few of the real world domains in which depend on undivided attention Emphasizing the link between theory and application Applied Attention Theory provides a deep understanding of how theories of attention developed from laboratory based psychological research can inform our understanding of everyday human performance in a wide number of applications and environments The basic theories discussed concern divided focused and selective attention and areas of application include mental workload measurement multi tasking distracted driving complex display design education and the training of attentional skills Includes an extensive reference list and citations to both basic and applied work Provides intuitive descriptions of attentional phenomena in the world beyond the laboratory Discusses applications of attention theory to diverse areas such as graph design distracted driving and process control Offers an engineering orientation as well as a psychological orientation to research Highlights the critical role of effort in single task behavior such as decision and choice to the extent that humans tend to be effort conserving in their choice of activities Examines how multiple tasks are managed in a discrete fashion

Handbook of Perception and Action Odmar Neumann, A. F. Sanders, 1996-04-04 The Handbook of Perception and Action overviews state of the art research in these two areas while also stressing the functional relationships between them The three volume set will be useful to researchers technicians graduate students and final year undergraduates in psychology developmental psychology speech and hearing neuropsychology neuroscience and physiology

Attention and Performance XI Michael I. Posner, Oscar S.M. Marin, 2016-09-19 Originally published in 1985 this volume presents the proceedings of the 11th International Symposium on Attention and Performance With few exceptions the central emphasis in previous meetings of the Attention and Performance Association was on the information processing approach to normal human cognition This emphasis had been supplemented on occasion by studies employing EEG methods but there had not been systematic attempts to relate the information processing approach to work in the neurosciences This volume seeks to emphasize the search for mechanism with such methods of approach as the following anatomical physiological neuropsychological behavioral and computational The editors believed that this was in accord with recent developing trends in cognition and particularly with developments in the study of attention at the time

The Cambridge Handbook of Applied Perception Research Robert R. Hoffman, Peter A. Hancock, Mark W. Scerbo, Raja Parasuraman, James L. Szalma, 2015-01-26 The Cambridge Handbook of Applied Perception Research covers core areas of research in perception with an emphasis on its application to real world environments Topics include multisensory processing of information time perception sustained attention and signal detection as well as pedagogical issues surrounding the training of applied

perception researchers In addition to familiar topics such as perceptual learning the Handbook focuses on emerging areas of importance such as human robot coordination haptic interfaces and issues facing societies in the twenty first century such as terrorism and threat detection medical errors and the broader implications of automation Organized into sections representing major areas of theoretical and practical importance for the application of perception psychology to human performance and the design and operation of human technology interdependence it also addresses the challenges to basic research including the problem of quantifying information defining cognitive resources and theoretical advances in the nature of attention and perceptual processes

Human Performance in Automated and Autonomous Systems

Mustapha Mouloua, Peter A. Hancock, 2019-09-19 This book examines recent advances in theories models and methods relevant to automated and autonomous systems The following chapters provide perspectives on modern autonomous systems such as self driving cars and unmanned aerial systems directly from the professionals working with and studying them Current theories surrounding topics such as vigilance trust and fatigue are examined throughout as predictors of human performance in the operation of automated systems The challenges related to attention and effort in autonomous vehicles described within give credence to still developing methods of training and selecting operators of such unmanned systems The book further recognizes the need for human centered approaches to design a carefully crafted automated technology that places the human user in the center of that design process Features Combines scientific theories with real world applications where automated technologies are implemented Disseminates new understanding as to how automation is now transitioning to autonomy Highlights the role of individual and team characteristics in the piloting of unmanned systems and how models of human performance are applied in system design Discusses methods for selecting and training individuals to succeed in an age of increasingly complex human machine systems Provides explicit benchmark comparisons of progress across the last few decades and identifies future prognostications and the constraints that impinge upon these lines of progress Human Performance in Automated and Autonomous Systems Current Theory and Methods illustrates the modern scientific theories and methods to be applied in real world automated technologies

The Handbook of Operator Fatigue Gerald Matthews,P.A. Hancock,2017-11-01 Fatigue is a recognized problem in many facets of the human enterprise It is not confined to any one area of activity but enters all situations in which humans have to perform for extended intervals of time Most problematic are the circumstances in which obligatory action is continuous and the results of failure are evidently serious or even catastrophic Therefore the modern media especially highlights fatigue related failures in industries such as transportation materials processing and healthcare It can be and indeed is no coincidence that most of the spectacular failures in process control that have resulted in the world s largest industrial accidents have occurred in the small hours of the morning when the circadian rhythm is lowest and operator fatigue itself peaks While there have been legislative efforts made at state federal and international levels to regulate working hours of employees the appropriate implementation of such legislation is still a long way off The Handbook of Operator Fatigue provides a comprehensive account of the subject to serve as the definitive reference work for researchers students and practitioners alike The volume features 30 chapters written by experts from around the world to address each important facet of fatigue including the scale of the fatigue problem Section I the nature of fatigue Section II how to assess fatigue Section III the impact of fatigue on health Section IV fatigue in the workplace Section V the neurological basis of fatigue VI sleep disorders VII and the design of countermeasures to fatigue VIII

cover a wide range of topics on the importance of sleep and consequences of sleep disruption This book will be of interest to students researchers and clinicians with a general interest in brain function or a specific interest in sleep *The Attentive Brain* Raja Parasuraman,2000 Of the myriad tasks that the brain has to perform perhaps none is as crucial to the performance of other tasks as attention A central thesis of this book on the cognitive neuroscience of attention is that attention is not a single entity but a finite set of brain processes that interact mutually and with other brain processes in the performance of perceptual cognitive and motor skills After an introductory part I the book consists of three parts Part II Methods describes the major neuroscience methods including techniques used only with animals anatomical tract tracing single unit electrophysiology neurochemical manipulations noninvasive human brain imaging techniques ERPs positron emission tomography and functional magnetic resonance imaging and studies with brain damaged individuals This part also includes a chapter on the computational modeling of attention Part III Varieties of Attention looks at three major components of attention from the cognitive neuroscience perspective selection vigilance and control It also discusses links to memory and language Finally part IV Development and Pathologies discusses the application of findings from the previous sections to the analysis of normal and abnormal development and to pathologies of attention such as schizophrenia and attention deficit disorders Contributors Edward Awh Gordon C Baylis Jochen Braun Dennis Cantwell Vincent P Clark Maurizio Corbetta Susan M Courtney Francis Crinella Matthew C Davidson Gregory J DiGirolamo Jon Driver Jane Emerson Pauline Filipek Ira Fischler Massimo Girelli Pamela M Greenwood James V Haxby Mark H Johnson John Jonides Julian S Joseph Robert T Knight Christof Koch Steven J Luck Richard T Marrocco Brad C Motter Ken Nakayama Orhan Nalcioglu Paul G Nestor Ernst Niebur Brian F O Donnell Raja Parasuraman Michael I Posner Robert D Rafal Trevor W Robbins Lynn C Robertson Judi E See James Swanson Diane Swick Don Tucker Leslie G Ungerleider Joel S Warm Maree J Webster Sharon Wigal
