Sverre Fehn On The Thought Of Construction:

Sverre Fehn Per Olaf Fjeld, Sverre Fehn, 1983 As recipient of the 1997 Pritzker Architecture Prize the profession's highest honor Norwegian architect Sverre Fehn has had an impact not only in his home country but around the globe His projects often described as being instilled with a human quality include the Norwegian Pavilion at the 1958 Brussels World Exhibition and the Nordic Pavilion at the 1962 Venice Biennale the Hamar Bispegaard Museum in Hamar the Glacier Museum in Fjaerland Fjord and the Aukrust Museum in Alvdal Fehn has been strongly influenced by Scandinavia's breathtaking landscape and light conditions His design sensibility is characterized by a great respect for material and construction As a professor of long standing at the Oslo School of Architecture and Design he has distilled his complex creative process passing his thoughts and philosophies to new generations of architects This study of Fehn's work provides an intimate glimpse into the world of this great postwar modernist Author Per Olaf Fjeld presents both biography and perceptive critique as he covers all of Fehn's major projects built and unbuilt from world renowned museums to lesser known houses Never before published comments by Fehn from lectures interviews and conversations with students as well as dynamic sketches are featured opening a window into the mind of this poetic and personal architect

Sverre Fehn and the City: Rethinking

Architecture's Urban Premises Stephen M. Anderson, 2023-03-15 The urban attentions of Pritzker Laureate Sverre Fehn 1924 2009 are extensive but as yet virtually unexplored This book examines ten select projects to illuminate Fehn's approach to the city the embodiment of that thinking in his designs and the broader lessons those efforts offer for better understanding the relationship between architecture and urban life with unignorable implications for emergent urban architecture and its address of sociological and ecological crises Wary of large scale planning proposals or the erasure of existing urban patterns Fehn offered an uncommon and profoundly vibrant approach to urbanism at the scale of the single architectural project His writings constructed buildings competition entries and lectures suggest opportunities for reinvigorating architecture's engagement with the city and provoke a rethinking of concepts foundational to its theorization What is the nature of urbanity What is the relationship of urbanity to the natural world What is the role of architecture in the provision and sustenance of urban life While exploring this territory will expand our knowledge of an architect central to key developments of late modernism the range of the book and the arguments developed therein delineate far broader aims a fuller understanding of architecture's urban promise

Sverre Fehn Per Olaf Fjeld, 2009-06-30 As recipient of the 1997 Pritzker Architecture Prize the profession's highest honor Norwegian architect Sverre Fehn has had an impact not only in his home country but around the globe His projects often described as being instilled with a human quality include the Norwegian Pavilion at the 1958 Brussels World Exhibition and the Nordic Pavilion at the 1962 Venice Biennale the Hamar Bispegaard Museum in Hamar the Glacier Museum in Fjaerland Fjord and the Aukrust Museum in Alvdal Fehn has been strongly influenced by Scandinavia's breathtaking landscape and light conditions His design sensibility is characterized by a great respect for material and

construction As a professor of long standing at the Oslo School of Architecture and Design he has distilled his complex creative process passing his thoughts and philosophies to new generations of architects This study of Fehn s work provides an intimate glimpse into the world of this great postwar modernist Author Per Olaf Fjeld presents both biography and perceptive critique as he covers all of Fehn s major projects built and unbuilt from world renowned museums to lesser known houses Never before published comments by Fehn from lectures interviews and conversations with students as well as dynamic sketches are featured opening a window into the mind of this poetic and personal architect **Sverre Fehn**

Christian Norberg-Schulz, Gennaro Postiglione, 1997 This comprehensive monograph presents fifty projects from throughout the four decades of Fehn s career Featured are such important works as the Archbishopric Museum of Hamar the Glacier Museum in Fjaerland and the Aukrust Museum in Alvdal all in Norway Also included are a number of houses and several competition projects both built and unbuilt Each of the works in this volume is illustrated with extensive photography presentation drawings and Fehn s signature sketches Complementing the architectural projects are essays by Francesco Dal Co Christian Norberg Schulz and Gennaro Postiglione which present an analytic portrait of the architect s career and an anthology of writings by Fehn and critics **The Routledge Companion to Architectural Drawings and Models**

Federica Goffi, 2022-05-30 Architectural drawings and models are instruments of imagination communication and historical continuity The role of drawings and models and their ownership placement and authorship in a ubiquitous digital age deserve careful consideration Expanding on the well established discussion of the translation from drawings to buildings this book fills a lacuna in current scholarship questioning the significance of the lives of drawings and models after construction Including emerging well known and world renowned scholars in the fields of architectural history and theory and curatorial practices the thirty five contributions define recent research in four key areas drawing sites sites of knowledge construction drawing office construction site the afterlife of drawings and models archiving collecting displaying and exhibiting tools of making architectural representations and their apparatus over time and the ethical responsibilities of collecting and archiving authorship ownership copyrights and rights to copy The research covers a wide range of geographies and delves into the practices of such architects as Sir John Soane Superstudio Eug ne Emmanuel Viollet le Duc Frank Lloyd Wright Wajiro Kon Germ n Samper Gnecco A PS Mies van der Rohe and Renzo Piano Resisting Postmodern Architecture

Stylianos Giamarelos, 2022-01-10 Since its first appearance in 1981 critical regionalism has enjoyed a celebrated worldwide reception The 1990s increased its pertinence as an architectural theory that defends the cultural identity of a place resisting the homogenising onslaught of globalisation Today its main principles such as acknowledging the climate history materials culture and topography of a specific place are integrated in architects education across the globe But at the same time the richer cross cultural history of critical regionalism has been reduced to schematic juxtapositions of the global with the local Retrieving both the globalising branches and the overlooked cross cultural roots of critical regionalism Resisting Postmodern

Architecture resituates critical regionalism within the wider framework of debates around postmodern architecture the diverse contexts from which it emerged and the cultural media complex that conditioned its reception In so doing it explores the intersection of three areas of growing historical and theoretical interest postmodernism critical regionalism and globalisation Based on more than 50 interviews and previously unpublished archival material from six countries the book transgresses existing barriers to integrate sources in other languages into anglophone architectural scholarship In so doing it shows how the periphery was not just a passive recipient but also an active generator of architectural theory and practice Stylianos Giamarellos challenges long held central notions of supposedly international discourses of the recent past and outlines critical regionalism as an unfinished project apposite for the 21st century on the fronts of architectural theory history and historiography

Organic Design in Twentieth-Century Nordic Architecture Erik Champion, 2019-02-18 Organic Design in Twentieth Century Nordic Architecture presents a communicable and useful definition of organic architecture that reaches beyond constraints The book focuses on the works and writings of architects in Nordic countries such as Sigurd Lewerentz J rn Utzon Sverre Fehn and the Aaltos Aino Elissa and Alvar among others It is structured around the ideas of organic design principles that influenced them and allowed their work to evolve from one building to another Erik Champion argues organic architecture can be viewed as a concerted attempt to thematically unify the built environment through the allegorical expression of ongoing interaction between designer architectural brief and building as process With over 140 black and white images this book is an intriguing read for architecture students and professionals alike

The Environmental Imagination Dean Hawkes, 2008 This volume presents a chronologically ordered and detailed account of the developing relationship between technics and poetics in environmental design in architecture through a consideration of the work of major names in the field

Reading Architecture and Culture Adam Sharr, 2012 Architecture displays the values involved in its inhabitation construction procurement and design It traces the thinking of the individuals who have participated in it their relationships and their involvement in the cultures where they lived and worked In this way buildings their details and the documents used to make them can be read closely for cultural insights Introducing the idea of reading buildings as cultural artefacts this book presents perceptive readings by eminent writers which demonstrate the power of this approach The chapters show that close readings of architecture and its materials can test commonplace assumptions help architects to appreciate the contexts in which they work and indicate ways to think more astutely about design The readings collected in this innovative and accessible book address buildings specifications and photographs They range in time from the fifteenth century examining the only surviving drawing made by Leon Battista Alberti to the recent past projects completed by Norman Foster in 2006 and Herzog and De Meuron in 2008 They range geographically from France to Puerto Rico to Kazakhstan and they range in fame from buildings celebrated by critics to house extensions and motorway service areas Taken together these essays demonstrate important research methods which yield powerful insights for

designers critics and historians and lessons for students **Weather Architecture** Jonathan Hill,2013-06-17 Weather Architecture further extends Jonathan Hill's investigation of authorship by recognising the creativity of the weather At a time when environmental awareness is of growing relevance the overriding aim is to understand a history of architecture as a history of weather and thus to consider the weather as an architectural author that affects design construction and use in a creative dialogue with other authors such as the architect and user Environmental discussions in architecture tend to focus on the practical or the poetic but here they are considered together Rather than investigate architecture's relations to the weather in isolation they are integrated into a wider discussion of cultural and social influences on architecture The analysis of weather's effects on the design and experience of specific buildings and gardens is interwoven with a historical survey of changing attitudes to the weather in the arts sciences and society leading to a critical re-evaluation of contemporary responses to climate change **On Span and Space** Bjorn N. Sandaker,2007-09-12 In this richly illustrated book with many practical examples Bjorn Sandaker provides readers with a better understanding of the relationship between technology and architecture As an experienced teacher and writer Sandaker offers a well founded aesthetic theory to support the understanding and evaluation of a structure's form and design examining concepts and viewpoints from both the professions of engineering and architecture Comprehensively covering structure and aesthetics this book is ideal for students professionals and academics in the areas of architecture and building *Studies in Tectonic Culture* Kenneth Frampton,2001-08-24 Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction the book's analytical framework rests on Frampton's close readings of key French and German and English sources from the eighteenth century to the present Kenneth Frampton's long awaited follow up to his classic *A Critical History of Modern Architecture* is certain to influence any future debate on the evolution of modern architecture *Studies in Tectonic Culture* is nothing less than a rethinking of the entire modern architectural tradition The notion of tectonics as employed by Frampton the focus on architecture as a constructional craft constitutes a direct challenge to current mainstream thinking on the artistic limits of postmodernism and suggests a convincing alternative Indeed Frampton argues modern architecture is invariably as much about structure and construction as it is about space and abstract form Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction the book's analytical framework rests on Frampton's close readings of key French and German and English sources from the eighteenth century to the present He clarifies the various turns that structural engineering and tectonic imagination have taken in the work of such architects as Perret Wright Kahn Scarpa and Mies and shows how both constructional form and material character were integral to an evolving architectural expression of their work Frampton also demonstrates that the way in which these elements are articulated from one work to the next provides a basis upon which to evaluate the works as a whole This is especially evident in his consideration of the work of Perret Mies and Kahn and the

continuities in their thought and attitudes that linked them to the past Frampton considers the conscious cultivation of the tectonic tradition in architecture as an essential element in the future development of architectural form casting a critical new light on the entire issue of modernity and on the place of much work that has passed as avant garde A copublication of the Graham Foundation for Advanced Studies and The MIT Press *Encyclopedia of Twentieth Century Architecture* R. Stephen Sennott, 2004 For more information including the introduction a full list of entries and contributors a generous selection of sample pages and more visit the Encyclopedia of 20th Century Architecture website Focusing on architecture from all regions of the world this three volume set profiles the twentieth century's vast chronicle of architectural achievements both within and well beyond the theoretical confines of modernism Unlike existing works this encyclopedia examines the complexities of rapidly changing global conditions that have dispersed modern architectural types movements styles and building practices across traditional geographic and cultural boundaries *The Structural Basis of Architecture* Bjørn N. Sandaker, Arne P. Eggen, Mark R. Cruvellier, 2013-01-11 This is a book about structures that shows students how to see structures as integral to architecture and how knowledge of structures is the basis for understanding both the mechanical and conceptual aspects inherent to the art of building Analyzing the structural principles behind many of the best known works of architecture from past and present alike this book places the subject within a contemporary context The subject matter is approached in a qualitative and discursive manner and is illustrated by many photographs of architectural projects and structural behaviour diagrams This new edition is revised and updated throughout includes worked out examples and is perfect as either an introductory structures course text or as a designer's sourcebook for inspiration On the Aesthetics of Architecture Ralf Weber, 2024-11-07 Originally published in 1995 as part of the Ethnoscapes Current Challenges in the Environmental Social Sciences series reissued now with a new series introduction On the Aesthetics of Architecture is a result of an interdisciplinary study in architectural theory psychology and philosophy and the author's experience as a practicing architect It tries to relate theories of aesthetics and recent advances in the psychology of visual perception to the practice of design The text starts with an analysis of traditional and contemporary schools of thought in architectural theory and then proceeds through the formulation of a general theory of aesthetics based on perceptual and cognitive information processing to a description of the actual conditions under which aesthetic experiences of buildings and cities take place It exemplifies principles of aesthetic appropriateness through an analysis of architectural space and form Weber's book attempts to move the discussion of architectural aesthetics beyond the shifting doctrines of style and the often ambiguous dicta of critics While the author makes no claim that his interpretation of psychological research will result in good architecture he does insist on the need to bring the discussion of form back to more objective grounds As such it provided a valuable teaching resource and an important new contribution to the discussion among architects themselves as well as between psychologists philosophers and art theorists at the time **The Dissertation** Iain Borden, Katerina

Rüedi,2006 This is a comprehensive guide to all that an architectural student might need to know about writing a dissertation It takes the student through starting writing preparing and submitting a dissertation **Modern**

Architecture: A Critical History (Fifth) (World of Art) Kenneth Frampton,2020-09-08 An extensively revised and updated edition of a bestselling classic on modern architecture and its origins by Kenneth Frampton Kenneth Frampton's highly acclaimed survey of modern architecture and its origins has been a classic since it first appeared in 1980 Starting with the cultural developments since 1750 that drove the modern movement moving through the creation of modern architecture and exploring the effects of globalization and the phenomenon of international celebrity architects this book is the definitive history of modern architecture For this extensively revised and updated fifth edition of *Modern Architecture* Frampton added new chapters exploring the ongoing modernist tradition in architecture while also examining the varied responses to the urgent need to build more sustainably and create structures that will withstand changing climates This new edition features completely redesigned interiors and an updated and expanded bibliography making this volume more indispensable than ever *Nightlands* Christian Norberg-Schulz,1997-07-29 Translated by Thomas McQuillan Architecture is a manifestation of

the environment in which it is placed observes distinguished architect and theoretician Christian Norberg Schulz A simple enough observation but one that becomes subtle and nuanced in this landmark book which attempts to define for the first time what Nordic building really is Norberg Schulz begins by contrasting the natural world of the North with that of the Mediterranean the Nordic unendingness against the sun saturated and homogeneous South Using themes such as natural domestic universal and foreign he finds the architecture of both regions sensibly related to their environments but whereas the South lends itself to abstraction the North is marked by variation openness and dynamism by low light forests and space Exploring the ways built experience takes place Norberg Schulz charts the distinctive character of land and climate that distinguishes Denmark's Sweden's Finland's and Norway's architectural traditions from each other and from those to the South While each of these countries might be said to share regional traits Norberg Schulz identifies differences the cultivated and closely detailed landscape and architecture of Denmark the dramatic structured forms of Norway that allow him to account for the way individual Nordic architectures evolved **PAGON** Espen Johnsen,2023-10-05 Through the

1940s and 1950s PAGON Progressive Architects Group Oslo Norway was an alliance of young CIAM affiliated Norwegian architects known for their innovative joint projects As a group PAGON went on to become largely overlooked in the history of modern architecture even though its individual members which included Sverre Fehn Jørn Utzon Arne Korsmo and Christian Norberg Schulz became defining figures in Scandinavian and international modernism This book tells the story of PAGON for the first time offering an impressive account of the group's projects buildings and approach and demonstrating why PAGON's projects are ripe for reappraisal in the international history of modern architecture It shows how PAGON's architecture constitutes a unique continuity between the Scandinavian functionalism of the late 1930s and the modern movement in the

US and an important transitional stage before the emergence of the better known neo avant garde groups within CIAM and Team 10 Published as part of the Bloomsbury Studies in Modern Architecture series which brings to light the work of significant yet overlooked modernist architects this book fills a gap in our understanding of mid century modern architecture and highlights the internationally diverse nature of the modern movement **Louis I. Kahn** Per Olaf Fjeld, Emily Randall Fjeld, 2019-10-04 Louis I Kahn The Nordic Latitudes is a new and personal reading of the architecture teachings and legacy of Louis I Kahn from Per Olaf Fjeld's perspective as a former student The book explores Kahn's life and work offering a unique take on one of the twentieth century's most important architects Kahn's Nordic and European ties are emphasized in this study that also covers his early childhood in Estonia his travels and his relationships with other architects including the Norwegian architect Arne Korsmo The authors have gathered personal reflections archival material and other student work to offer insight into the wisdom that Kahn imparted to his students in his famous masterclass Louis I Kahn The Nordic Latitudes addresses Kahn's legacy both personally and in terms of the profession documents a research trip the University of Pennsylvania's Louis I Kahn Collection and confronts the affiliation of Kahn's work with postmodernism
