Stochastic Modeling And Optimization Of Manufacturing Systems And Supply Chains:

Stochastic Modeling and Optimization of Manufacturing Systems and Supply Chains J. George

Shanthikumar, David D. Yao, W.H.M. Zijm, 2012-12-06 This volume originates from two workshops both focusing on themes that are reflected in the title of the volume The first workshop took place at Eindhoven University of Technology April 24-26 2001 on the occasion of the University granting a doctorate honoris causa to Professor John A Buzacott The second workshop was held on June 15 2002 at Cornell University preceding the annual INFORMS/MSOM Conference honoring John's retirement and his lifetime contributions Each of the two workshops consisted of about a dozen technical presentations The objective of the volume however is not to simply publish the proceedings of the two workshops Rather our objective is to put together a select set of articles each organized into a well written chapter focusing on a timely topic Collected into a single volume these chapters aim to serve as a useful reference for researchers and practitioners alike and also as reading materials for graduate courses or seminars

Stochastic Modeling and Optimization of Manufacturing Systems and Supply Chains J. George Shanthikumar, David D Yao, Zijm Henk, 2003-07-01 Handbook of Stochastic Models and Analysis of Manufacturing System Operations J. MacGregor Smith, Barış Tan, 2013-05-17 This handbook surveys important stochastic problems and models in manufacturing system operations and their stochastic analysis Using analytical models to design and control manufacturing systems and their operations entail critical stochastic performance analysis as well as integrated optimization models of these systems Topics deal with the areas of facilities planning transportation and material handling systems logistics and supply chain management and integrated productivity and quality models covering Stochastic modeling and analysis of manufacturing systems Design analysis and optimization of manufacturing systems Facilities planning transportation and material handling systems analysis Production planning scheduling systems management and control Analytical approaches to logistics and supply chain management Integrated productivity and quality models and their analysis Literature surveys of issues relevant in manufacturing systems Case studies of manufacturing system operations and analysis Today's manufacturing system operations are becoming increasingly complex Advanced knowledge of best practices for treating these problems is not always well known The purpose of the book is to create a foundation for the development of stochastic models and their analysis in manufacturing system operations Given the handbook nature of the volume introducing basic principles concepts and algorithms for treating these problems and their solutions is the main intent of this handbook Readers unfamiliar with these research areas will be able to find a research foundation for studying these problems and systems

Uncertainty in the Electric Power Industry Christoph Weber, 2006-01-06 Around the world liberalization and privatization in the electricity industry have led to increased competition among utilities At the same time utilities are now exposed more than ever to risk and uncertainties which they cannot pass on to their customers through price increases as in a regulated environment Especially electricity generating companies have to face volatile wholesale

prices fuel price uncertainty limited long term hedging possibilities and huge to a large extent sunk investments In this context Uncertainty in the Electric Power Industry Methods and Models for Decision Support aims at an integrative view on the decision problems that power companies have to tackle It systematically examines the uncertainties power companies are facing and develops models to describe them including an innovative approach combining fundamental and finance models for price modeling The optimization of generation and trading portfolios under uncertainty is discussed with particular focus on CHP and is linked to risk management Here the concept of integral earnings at risk is developed to provide a theoretically sound combination of value at risk and profit at risk approaches adapted to real market structures and market liquidity Also methods for supporting long term investment decisions are presented technology assessment based on experience curves and operation simulation for fuel cells and a real options approach with endogenous electricity prices *Operations*

Research and Health Care Margaret L. Brandeau, Francois Sainfort, William P. Pierskalla, 2006-04-04 In both rich and poor nations public resources for health care are inadequate to meet demand Policy makers and health care providers must determine how to provide the most effective health care to citizens using the limited resources that are available This chapter describes current and future challenges in the delivery of health care and outlines the role that operations research OR models can play in helping to solve those problems The chapter concludes with an overview of this book its intended audience the areas covered and a description of the subsequent chapters KEY WORDS Health care delivery Health care planning HEALTH CARE DELIVERY PROBLEMS AND CHALLENGES 3 1 1 WORLDWIDE HEALTH THE PAST 50 YEARS Human health has improved significantly in the last 50 years In 1950 global life expectancy was 46 years 1 That figure rose to 61 years by 1980 and to 67 years by 1998 2 Much of these gains occurred in low and middle income countries and were due in large part to improved nutrition and sanitation medical innovations and improvements in public health infrastructure

Rapid Modelling for Increasing Competitiveness Gerald Reiner, 2009-06-13 A Perspective on Two Decades of Rapid Modeling It is an honor for me to be asked to write a foreword to the Proceedings of the 1st Rapid Modeling Conference In 1987 when I coined the term Rapid Modeling to denote queuing modeling of manufacturing systems I never imagined that two decades later there would be an international conference devoted to this topic I am delighted to see that there will be around 40 presentations at the conference by leading researchers from around the world and about half of these presentations are represented by written papers published in this book I congratulate the conference organizers and program committee on the success of their efforts to hold the first ever conference on Rapid Modeling Attendees at this conference might find it interesting to learn about the history of the term Rapid Modeling in the context it is used here During the fall of 1986 I was invited to a meeting at the Headquarters of the Society of Manufacturing Engineers SME in Dearborn Michigan By that time I had successfully demonstrated several industry applications of queuing network models at leading manufacturers in the USA Although in principle the use of queuing networks to model manufacturing systems was well known

in the OR MS community and many papers had been published the actual use of such models by manufacturing professionals was almost nonexistent

Nonlinear Integer Programming

Duan Li, Xiaoling Sun, 2006-08-13

It is not an exaggeration that much of what people devote in their life revolves around optimization in one way or another

On one hand many decision making problems in real applications naturally result in optimization problems in a form of integer programming

On the other hand integer programming has been one of the great challenges for the optimization research community for many years due to its computational difficulties

Exponential growth in its computational complexity with respect to the problem dimension

Since the pioneering work of R Gomory 80 in the late 1950s the theoretical and methodological development of integer programming has grown by leaps and bounds mainly focusing on linear integer programming

The past few years have also witnessed certain promising theoretical and methodological achievements in nonlinear integer programming

When the first author of this book was working on duality theory for n convex continuous optimization in the middle of 1990s Prof Douglas J White suggested that he explore an extension of his research results to integer programming

The two authors of the book started their collaborative work on integer programming and global optimization in 1997

The more they have investigated in nonlinear integer programming the

more they need to further delve into the subject Both authors have been greatly enjoying working in this exciting and challenging field

Evaluation and Decision Models with Multiple Criteria Denis Bouyssou,Thierry Marchant,Marc Pirlot,Alexis Tsoukias,Philippe Vincke,2006-06-07 Formal decision and evaluation models are sets of explicit and well defined rules to collect assess and process information in order to be able to make recommendations in decision and or evaluation processes They are so widespread that almost no one can pretend not to have used or suffered the consequences of one of them Our earlier companion volume Evaluation and Decision Models heavily criticised formal models but also argued that they could be useful On the other hand Evaluation and Decision Models with Multiple Criteria is a guide aimed at helping the analyst to choose a model and use it consistently We propose a sound analysis of techniques and our presentation can be extended to most decision and evaluation models as a decision aiding methodology This volume is intended for the enlightened practitioner for anyone who uses decision or evaluation models for research or for applications and is willing to question his practice to have a deeper understanding of what he does

Patient Flow: Reducing Delay in Healthcare Delivery Randolph Hall,2006-10-11 Patient Flow Reducing Delay in Healthcare Delivery is dedicated to improving healthcare through reducing the delays experienced by patients One aspect of this goal is to improve the flow of patients so that they do not experience unnecessary waits as they flow through a healthcare system Another aspect is ensuring that services are closely synchronized with patterns of patient demand Still another aspect is ensuring that ancillary services such as housekeeping

and transportation are fully coordinate with direct patient care It is the first book treatment to have reduction in patient delay as its sole focus and therefore provides the foundation by which hospitals can implement change Reflecting the highly interdisciplinary and practitioner nature of this book the chapters have been written by doctors nurses industrial engineers system engineers and geographers and thus these perspectives provide the comprehensive view needed to address the problem of patient delay
