Financial and Insurance Formulas Tomas Cipra, 2010-07-16 Financial and insurance calculations become more and more frequent and helpful for many users not only in their profession life but sometimes even in their personal life Therefore a survey of formulas of financial and insurance mathematics that can be applied to such calculations seems to be a suitable aid In some cases one should use instead of the term formula more suitable terms of the type method procedure or algorithm since the corresponding calculations cannot be simply summed up to a single expression and a verbal description without introducing complicated symbols is more appropriate The survey has the following ambitions The formulas should be applicable in practice it has motivated their choice for this survey first and foremost On the other hand it is obvious that by time one puts to use in practice seemingly very abstract formulas of higher mathematics e.g. when pricing financial derivatives evaluating financial risks applying accounting principles based on fair values choosing alternative risk transfers ARL in insurance and the like The formulas should be error free though such a goal is not achievable in full since in the financial and insurance framework one publishes sometimes in a hasty way various untried formulas and methods that may be incorrect Of course the formulas are introduced here without proofs because their derivation is not the task of this survey Modeling, Measuring and Managing Risk Georg Ch Pflug, Werner Römisch, 2007 This book is the first in the market to treat single and multi period risk measures risk functionals in a thorough comprehensive manner It combines the treatment of properties of the risk measures with the related aspects of decision making under risk The book introduces the theory of risk measures in a mathematically sound way It contains properties characterizations and representations of risk functionals for single period and multi period activities and also shows the embedding of such functionals in decision models and the properties of these models **Quantitative Financial Risk Management** Constantin Zopounidis, Emiliós Galariotis, 2015-06-08 A
