Waterfronts Revisited Heleni Porfyriou, Marichela Sepe, 2016-08-05 *Waterfronts Revisited* addresses the historical evolution of the relationship between port and city and re-examines waterfront development by looking at the urban territory and historical city in their complexity and entirety. By identifying guiding values, urban patterns and typologies and local needs and experiences, cities can break the isolation of the harbor by reconnecting it to the urban structure, its functions, spaces and forms. Using the UNESCO recommendation for the Historic Urban Landscape as the guiding concept and a tool for managing urban preservation and change, this collection of essays illustrates solutions to issues of globalisation, commercialization of space and commoditisation of culture in waterfront development. Through sixteen selected case studies, Editors Heleni Porfyriou and Marichela Sepe offer planners and urban designers a broad spectrum of alternative solutions to waterfront regeneration, interventions and redevelopments addressing sustainability, regional cultural diversity and the debate between conservation and transformation.

Eco-Cities and Green Transport Huapu Lu, 2020-04-07 *Eco cities and Green Transport* presents a systematic, uniform and structured way to examine different cities at different scales in order to suggest unique solutions appropriate to each scale. The book examines city infrastructure and the built environment, transport system, supply and demand and transport behavior to offer innovative policy solutions for various transport modes. With end of chapter experiences and lessons summarized, the book provides an in-depth analysis of the advantages and disadvantages for transforming cities and their transport systems to meet residents' current and future needs. The increasingly rapid growth of global urbanization requires cities to be built in an ecologically sustainable, energy efficient and livable way. A critical component in achieving these goals is an urban transportation system that uses natural resources as reasonably as possible. The outcome of a ten-year data collection research effort by the author and his team, the book sheds new insights into these challenges using a thorough investigation of traffic systems in 20 cities from 13 countries throughout Asia, Europe and the United States.
