Henri Theil's Contributions to Economics and Econometrics Henri Theil, 1992 *Applied Panel Data Analysis for Economic and Social Surveys* Hans-Jürgen Andreß, Katrin Golsch, Alexander W. Schmidt, 2013-01-24 Many economic and social surveys are designed as panel studies which provide important data for describing social changes and testing causal relations between social phenomena. This textbook shows how to manage, describe, and model these kinds of data. It presents models for continuous and categorical dependent variables, focusing either on the level of these variables at different points in time or on their change over time. It covers fixed and random effects models, models for change scores, and event history models. All statistical methods are explained in an application-centered style using research examples from scholarly journals which can be replicated by the reader through data provided on the accompanying website. As all models are compared to each other, it provides valuable assistance with choosing the right model in applied research. The textbook is directed at master and doctoral students as well as applied researchers in the social sciences, psychology, business administration, and economics. Readers should be familiar with linear regression and have a good understanding of ordinary least squares estimation. [Handbook of Econometrics](#) James J. Heckman, Edward Leamer, 2009-01-13 [Handbook of Survey-Based Business Cycle Analysis](#) Georg Goldrian, 2007-01-01 This Handbook aims to provide an overview of regular survey activities as well as to show how survey results can be used scientifically in the context of business cycle analysis and forecasting. Examples of various business surveys are described in detail, starting with their objectives, the questions they pose, how they are weighted and extrapolated, and the representativeness of their results. A detailed scientific examination of the explanatory value of the data is also made in order to demonstrate their potential usefulness. The Handbook has three parts: firstly, it presents the importance of business surveys for empirical research; secondly, selected surveys are introduced in detail, such as the Ifo Business Survey and the Ifo Investment Survey; and thirdly, a broad spectrum of studies on the consequence of the survey results is presented. The significance of the surveys applied equally to business cycle analysis and to forecasting. An array of modern methods of time series analysis and econometric model construction is used in these investigations.
