Surveys In Social Research David De Vaus, David de Vaus, 2013-12-17 David de Vaus classic text *Surveys in Social Research* provides clear advice on how to plan conduct and analyse social surveys It emphasises the links between theory and research the logic and interpretation of statistics and the practices of social research This sixth edition has been completely revised and updated and contains new examples data and extensive lists of web resources As well as explaining how to conduct good surveys de Vaus shows how to become a critical consumer of research He argues that the logic of surveys and statistics is simply an extension of the logic we use in everyday life analysis however requires creativity and imagination rather than the application of sterile mechanical procedures The prime goal of research should be to gain accurate understanding and as a researcher use methods and techniques which enhance understanding De Vaus advocates researchers use the method rather than letting the method use you *Surveys in Social Research* is essential reading for students and researchers working with surveys It assumes no background in statistical analysis and gives you the tools you need to come to grips with this often challenging field of work

*The International Social Survey Programme 1984-2009* Max

Haller, Roger Jowell, Tom W Smith, 2009-09-11 The social sciences rely more on the comparative method than on experimental data mainly because the latter is difficult to acquire amongst human populations The International Social Survey Programme has played a pioneering role in creating and sustaining methodologically sophisticated mass attitude surveys across the globe Starting in 1984 with five nations it now encompasses forty five nations spread over five continents each administering an

identical annual survey to a random sample of their population Analyses of the data or descriptions of the methodology already appear in over 3 000 publications This book contains new contributions from three dozen eminent scholars who analyse and compare the perceptions and attitudes of citizens across all five continents nations and over time Subjects range from inequality and the role of the state ethnic national and global identities the changing relevance of religion beliefs and practices gender roles family values and work orientations household and society Some chapters focus on methodological issues others focus on substantive findings This book sets new standards for cross cultural research *Surveys in Social Research* D. A. De Vaus,1985

**The Survey Method** Catherine Marsh,2025-06-30 In the early 1980s the survey was the most widely used method of social research but it had been the object of much damaging criticism Critics maintained that there were philosophical flaws inherent in survey practice which made it unacceptable as valid method sociology students were taught that surveys are positivist and that alternatives should be sought wherever possible In *The Survey Method* originally published in 1982 Catherine Marsh examines such claims and shows that much of this criticism was ill founded The book shows that surveys do not have to be mere superficial glimpses of the surface features of processes fact gathering exercises or opinion polls Properly designed executed and analysed they can actually provide the kind of evidence that social theorists concerned with uncovering dynamic aspects of social life will want to use Catherine Marsh challenges the contention that different research procedures automatically have to commit those who use them either to a particular theory of knowledge a view of human nature or even a political stance *The Survey Method* is neither a pure defence of surveys nor a textbook on how to do them It does after all criticise the kinds of surveys that are often done and it is particularly hostile to some new and manipulative developments in the often anti democratic use made of survey results and opinion polls Catherine Marsh s aim is to contribute to the methodological debate on survey research Although the book will find most of its readers among academic sociologists it also contains a wealth of detail on the history of surveys and an extensive annotated bibliography of the major survey literature It will accordingly prove essential reading for practising social researchers while re establishing the credentials of survey research amongst the broader social science community

*Methods of Criminological Research* Victor R Jupp,2012-11-12 Examining the different ways in which data can be collected and analyzed for research on crime and criminal justice this book deals with social surveys experimental methods official statistics observation and detailed interviews This practical text includes sections on methods of criminological research types of data measuring and explaining crime studying the criminal justice system gaining access publishing results Throughout it emphasizes the necessity of examining forms of data collection and analysis within the context of the criminological problems being investigated the theoretical approaches used to address these problems and the political and institutional contexts within which research takes place

**The Turn to Biographical Methods in Social Science** Prue Chamberlayne,Joanna Bornat,Tom Wengraf,2002-09-11 Biographical research methods have become a useful and popular

tool for contemporary social scientists This book combines an exploration of the historical and philosophical origins of this important field of qualitative research with comparative examples of the different ways that biographical methods have been successfully applied internationally Through these many illustrative examples of socio biography in process the authors show how formal textual analysis whilst uncovering hidden emotional defences can also shed light on wider historical processes of societal transformation Topics discussed include individual and linked lives generational change political influences on memory and identity biographical work in reflexive societies narrativity and empowerment in professional practice ways of theorising and generalising from case studies Biographical Methods in the Social Sciences promotes debate and provides opportunities for students and researchers to widen their uses of narrative research

**Migration in South and Southern Africa** Pieter Kok (Zuid-Afrika.),2006 Covers three broad areas macro level migration trends in sub Saharan Africa micro level factors in South African migration and a synthesis of current migration theory

*Qualitative Analysis* Douglas Ezzy,2013-10-18 Offering a detailed introduction to the practice of data analysis this book is both user friendly and theoretically grounded Drawing on his extensive experience of qualitative research Douglas Ezzy reviews approaches to data analysis in established research traditions including ethnography phenomenology and symbolic interactionism alongside the newer approaches informed by cultural studies and feminism He explains the difference between inductive deductive and abductive theory building provides a guide to computer assisted analysis and outlines techniques such as journal writing team meetings and participant reviews This text is one of the first to treat computer assisted data analysis as an integral part of qualitative research Exceptionally well written this is a valuable reference for research students and professional researchers in the social sciences and health

*Data Construction in Social Surveys* Nicholas Bateson,2025-07-11 Before the early 1980s much attention had been given in the social survey literature to the analysis and interpretation of data but much less to the problems of constructing the individual datum Yet without good work at datum level a good data set cannot be produced and without good data no useful analyses and interpretations may be made What do we mean by survey data What are good data and how do we recognise them Originally published in 1984 Nicholas Bateson tackles these questions and in doing so offers a redefinition of the validity of survey data and suggests a new approach or a more assertive formulation of an old approach to the testing of data for validity He specifies conditions that must be satisfied if survey data are to be called valid and brings out the implications of his ideas for the management of survey error This book then provides a basis for thinking about discussing and evaluating survey data It will be of value to survey researchers to users of survey data and to students of social science who encounter reports of surveys and need to understand the problems intrinsic to survey data

*Researching Translation and Interpreting* Claudia V. Angelelli,Brian James Baer,2015-07-16 This volume offers a comprehensive view of current research directions in Translation and Interpreting Studies outlining the theoretical concepts underpinning that research and presenting detailed discussions of the various methods used Organized around

three factors that are responsible for shaping the study of translation and interpreting today post positivist theoretical approaches developments in the language industry and technological innovations this volume is divided into three parts Part I introduces the basic concepts organizing translation and interpreting research such as the difference between qualitative and quantitative research between product oriented and process oriented studies and between prescriptive and descriptive approaches Part II provides a theoretical mapping of current translation and interpreting research covering the theories underlying the current conceptualization of translation and interpreting from queer studies to cognitive science Part III explores the key methodological approaches to research in Translation and Interpreting Studies including corpus based longitudinal observational and ethnographic studies as well as survey and focus group based studies The international range of contributors are all leading research experts who use the methodologies in their work They present the research aims of these methods offer sample research questions that can and cannot be addressed by these methods and discuss modes of data collection and analysis This is an essential reference for all advanced undergraduates postgraduates and researchers in Translation and Interpreting Studies     Monographic Series Library of Congress,1982     Doing Secondary Analysis Angela Dale,Sara Arber,Michael Procter,2025-06-30 Originally published in 1988 Doing Secondary Analysis is a practical guide to the secondary analysis of large scale survey data At a time when funding for primary data collection was increasingly constrained the secondary analysis of high quality government surveys offered the social scientist an unrivalled opportunity This volume provided a guide which moves through every stage of doing secondary analysis The authors begin with the conceptualization of the research problem and examine all the practicalities of using both standard rectangular data and hierarchical data and of deriving simple and complex variables They also provide a lucid description of the hardware and software available to the secondary analyst at the time This book successfully demonstrates the way in which secondary analysis can contribute both to the development of sociological theory and to social policy formation The authors emphasize throughout that secondary analysis cannot be used as a short cut to quick results but that as much care over defining the research problem and understanding the categories of data is needed as for any other kind of research While Doing Secondary Analysis was invaluable to those about to embark upon social research it also offered many challenges to more experienced researchers     *Resources in Education* ,1980     **Interviewer Effects from a Total Survey Error Perspective** Kristen Olson,Jolene D.
