Selected Papers from SDEWES 2018 Neven Duic, Mário Costa, Qiuwang Wang, 2020-09-30

Preface Several countries have recently realized that the present paradigm of development in environmental and energy fields is unsustainable As global awareness of environmental issues grows governments worldwide are promoting policies which aim to limit the harmful effects of human development on the environment In particular these novel policies seek to address the rapid increase of the global temperature especially in the polar regions as well as to manage human plastic waste accumulating in seas To resolve these issues will require a number of actions to be implemented unfortunately the recent COP 24 Conference was unsuccessful in establishing a global agreement to achieve these actions In order for the upcoming 2020 COP 26 Conference to be successful in creating such an agreement the scientific community must support the policymakers efforts Within this framework it is necessary to show the efforts of countries worldwide as they try to negotiate an agreement to increase the energy efficiency and reduce greenhouse gas GHG emissions In addition the research reports generated can provide quantitative measures of the necessary actions to be implemented in order to address sustainable and efficient energy use Among other topics the papers presented in this issue investigate innovations in novel efficient and environmentally friendly technologies mainly based on renewable energy sources The study also highlights the different sectors involved in this task such as energy conversion systems urban areas mobility sustainability water management social aspects etc In this field the Sustainable Development of Energy Water and Environment Systems SDEWES conference provides the foremost forum for discussion on these topics The 13th Sustainable Development of Energy Water and Environment Systems Conference was held in Palermo Italy in 2018 This Special Issue of Energies precisely dedicated to 13th SDEWES Conference features papers in three main topics Energy policy and energy efficiency in urban areas energy efficiency in industry biomass and other miscellaneous energy systems

EU energy policy is more and more promoting a resilient efficient and sustainable energy system Several agreements have been signed in the last few months that set ambitious goals in terms of energy efficiency and emission reductions and to reduce the energy consumption in buildings These actions are expected to fulfill the goals negotiated at the Paris Agreement in 2015 The successful development of this ambitious energy policy needs to be supported by scientific knowledge a huge effort must be made in order to develop more efficient energy conversion technologies based both on renewables and fossil fuels Similarly researchers are also expected to work on the integration of conventional and novel systems also taking into account the needs for the management of the novel energy systems in terms of energy storage and devices management Therefore a multi disciplinary approach is required in order to

achieve these goals To ensure that the scientists belonging to the different disciplines are aware of the scientific progress in the other research areas specific Conferences are periodically organized One of the most popular conferences in this area is the Sustainable Development of Energy Water and Environment Systems SDEWES Series Conference The 12th Sustainable Development of Energy Water and Environment Systems Conference was recently held in Dubrovnik Croatia The present Special Issue of Energies specifically dedicated to the 12th SDEWES Conference is focused on five main fields energy policy and energy efficiency in smart energy systems polygeneration and district heating advanced combustion techniques and fuels biomass and building efficiency 7th Conference on Sustainable Development of Energy, Water and Environment Systems, SDEWES 2012 ,2013

**The Water, Food, Energy and Climate Nexus** Felix Dodds,Jamie Bartram,2016-03-31 Global trends of population growth rising living standards and the rapidly increasing urbanized world are increasing the demand on water food and energy Added to this is the growing threat of climate change which will have huge impacts on water and food availability It is increasingly clear that there is no place in an interlinked world for isolated solutions aimed at just one sector In recent years the nexus has emerged as a powerful concept to capture these inter linkages of resources and is now a key feature of policy making This book is one of the first to provide a broad overview of both the science behind the nexus and the implications for policies and sustainable development It brings together contributions by leading intergovernmental and governmental officials industry scientists and other stakeholder thinkers who are working to develop the approaches to the Nexus of water food energy and climate It represents a major synthesis and state of the art assessment of the Nexus by major players in light of the adoption by the United Nations of the new Sustainable Development Goals and Targets in 2015 With a foreword by HRH the Prince of Wales
