Sustainable Minerals Operations in the Developing World Geological Society of London, 2005 The sustainable development of minerals which are non renewable resources is a major challenge in today's world In this regard the true definition of sustainability is a debating point in itself can such a concept exist with respect to non renewable resources Perhaps the ideal sustainability model is one that minimizes negative environmental impact and maximizes benefits to society the economy and regional national development Developed and near developed economies rely for commodity supplies on developing countries where major mining operations are often a mainstay of the domestic economy Limited environmental regulation and low wages lead to charges of exploitation Also large numbers of people have no alternative to living by informal often dangerous artisanal mining This Special Publication gives examples from developing countries from all scales of mineral extraction The volume reviews environmental economic health and social problems and highlights the need to solve these before sustainability can

be achieved The better solutions require mutual understanding through full involvement of all stakeholders education training and investment so that small scale and artisanal mines can grow into well managed operations At larger scales most major international mining companies have now improved their practices and are monitoring their progress although there is no room for complacency in this rapidly changing area

The Social Dynamics of Deforestation in the Philippines Gerhard van den Top,2003 This work offers a detailed case study on the dynamics of forest use degradation and loss in Northeast Luzon Philippines Following an interdisciplinary approach the study charts the degradation and loss of forest in this area between 1950 and 1990 as it relates to the social and political context of logging forest migration and changes in upland agriculture Based on ten years of research the author introduces us to the actions livelihood options and motives of all the principal group of actors

The Contribution of International Fisheries Law to Human Development Nienke van der Burgt,2012-11-01 The Contribution of International Fisheries Law to Human Development An Analysis of Multilateral and ACP EU Fisheries Instruments examines whether and how legal fisheries instruments encompass a normative consensus on human development Focusing on both multilateral treaties and soft law as well as the ACP EU bilateral fisheries instruments Nienke van der Burgt provides a detailed analysis as to whether these different types of legal instruments reflect the principles of equity poverty eradication and participation which have been identified as key indicators of human development Moreover specific attention is paid to whether explicit reference is made to the small scale fisheries sector and to the role of women Concluding that despite increasing evidence of the potential and significant contribution of fisheries towards human development legal fisheries instruments seem to be struggling with the incorporation of a human development centred approach The Contribution of International Fisheries Law to Human Development is essential reading for all those involved in the fields of international environmental law and sustainable human development

Towards Negotiated Co-management

of Natural Resources in Africa L. B. Venema, 1999 Within the field of management of natural resources this book focuses on the various approaches of policy formulation and implementation The question central to this book is how to co operate with people the various categories of residents as well as non residents in the rural areas in a top down a participatory or a contractual co management way On the basis of a comparative analysis of 12 case studies in the book these three approaches are thoroughly discussed and their internal and external constraints examined The book starts with an editorial chapter discussing the recent administrative and political developments in Africa as well as the new opportunities which they offer for policies in the field of environment and development The question is brought up whether the recent processes of decentralization democratization and empowerment of local organizations have indeed created new opportunities or that they have only superficially changed the political culture of the countries concerned In the concluding chapter of the book the approaches are contrasted to each other as logical models each with its own potentiality and limitations Conclusions are formulated why the top down approach must result in improvization to escape from failure and why the participatory approach risks to end up into a mixed balance Special attention is given to the conditions and the prospects for the contractual or co management approach which has been introduced into Africa only recently Under certain conditions this approach seems rather promising

Environmental Jurisprudence in India C.M. Abraham, 2023-12-11 Within the last two decades India has not only enacted specific legislation on environmental protection but has also virtually created a new fundamental right to a clean environment in the Constitution The models and methods adopted in the Indian context appear at first sight similar to those in other common law systems Yet there are many subtle differences which have changed the structure and content of legal development in India Indian environmental jurisprudence brings out the unique characteristics of a new legal order which has gradually been established in India The distinguishing nature of this jurisprudence as this book shows in detail has three interconnected elements First the nature of the new Indian constitutional law regime accords greater importance to public concerns than protecting private interests Secondly this jurisprudential development reflects certain aspects of Indian legal culture through implicit and explicit reliance on autochthonous values and concepts of law encapsulated in the Indian juristic postulate of dharma Thirdly the emerging Indian environmental jurisprudence bears testimony to the activist role of the Indian judiciary which has also had a significant impact in many areas other than environmental law In short the development of environmental jurisprudence in India manifests neo dharmic jurisprudence in postmodern public law It accommodates ideas currently voiced by experts around the world for protecting the environment in forms modified by the Indian legal culture

Natural Forest Management in the American Tropics Francis E. Putz, 1991

Wasting the Rain (Routledge Revivals) William M. Adams Adams, 2014-05-01 First published in 1992 this title offers an experienced and constructive evaluation of the ways in which water resources have been developed in Africa Adams argues that the best hope of productive development lies in working and engaging with local people and using local

knowledge of the environment effectively Modern large scale developments that have largely been ineffective are examined and emphasis is placed on the importance of using the skills and concerns of those affected such as small farmers to develop ingenious water projects an approach that can be applied worldwide This is an interesting and relevant title which will be of particular value to those with an interest in the developments in water resource conservation over the past two decades

Health Impact Assessment for Sustainable Water Management Lorna Fewtrell, David Kay, M. Benjamin, 2008-07-15 Health Impact Assessment for Sustainable Water Management is a pioneering international text exploring and developing this emerging discipline It is the first to take an international perspective seeking to draw generic lessons from both the developed and developing nations experience in this new area of activity The approach is being applied in policy development to strengthen the evidence base and across a wide spectrum of resource developments industrial and urban infrastructure projects and in aid projects in developing countries This book illustrates the importance of considering health in water management developments and demonstrates the role of health impact assessment HIA in this process Case studies illustrate a range of management approaches to different system implementation issues and scale factors ranging from domestic rainwater harvesting for the supply of non potable water to a large scale hydroelectric project The concept objectives terminology and challenges of HIA are introduced and illustrated by case studies including rainwater harvesting greywater reuse sustainable drainage and evaluations of the health impacts of flooding Developing country case studies include a small scale irrigation project in Zimbabwe a large hydro electric scheme in Lao Peoples Democratic Republic and the implementation issues surrounding the use of domestic wastewater as a resource in demand by agricultural enterprises in Pakistan The case studies illustrate different HIA approaches including the use of quantitative and qualitative information and provide benchmarks of current practice for practitioners seeking to apply HIA in the emerging agendas in both developed and developing nations The critical appraisals within each chapter offer both best practice exemplars as well as explanations of problems and mistakes of past project implementation and define the requirements for the policy communities who will be increasingly required to accommodate HIA information in resource allocation decisions As a result this book will be of interest to planners developers policy makers public health environmental and water utility scientists and practitioners

Agriculture and the Environment

C.A. Edwards, M.K. Wali, D.J. Horn, F. Miller, 2012-12-02 Until the 1980s global increases in food production exceeded the concomitant growth of human populations. However, progressively agriculture is becoming unable to meet the world wide per capita needs for food. Unless there is major international cooperation in addressing the problems associated with population control, it is predicted that the global human population will reach more than 14 billion by the year 2050 with provision of adequate food, fuel and space for such an increased population unachievable. These problems are accentuated by factors such as world wide reductions in soil fertility, the accelerating degradation of land that is suitable for food production through soil erosion, the world wide trend for migration of human populations from rural habitats to cities and extremely rapid rates of global deforestation. Possible solutions to global sustainability in agriculture and natural resources must involve an integration of ecological, sociological, cultural and economic considerations as well as mandated international and national policies. This publication outlines these problems and attempts to seek solutions. *The Literature of Agricultural Engineering* Carl W. Hall, Wallace C. Olsen, 1992 The second of a seven volume series. The Literature of the Agricultural Sciences, this book analyzes the trends in published literature of agricultural engineering during the past century with emphasis on the last forty years. It uses citation analysis and other bibliometric techniques to identify the most important journals, report series and monographs for the developed countries as well as those in the Third World. IES Report, 1972

Managing Transboundary Waters of Latin America Asit Biswas, 2013-09-13 Definitive analyses of transboundary water management in Latin America are conspicuous by their absence. The situation is a little better for rivers compared to groundwater resources. Transboundary water management in Latin America has been evolving in a somewhat different manner compared to other continents. The book includes eight authoritative case studies of Latin American transboundary rivers and aquifers as well as a thinkpiece on the complexities of managing aquifers based on global experiences. The case studies are of different scales ranging from the mighty Amazon to small Silala. The overall focus of the book is on ways in which such difficult and complex rivers and aquifers that are shared by two or more countries can be managed efficiently and equitably and on the lessons both positive and negative that other regions can learn from the Latin American experience. This book was published as a special issue of the International Journal of Water Resources Development.
