Sustainable Food Systems to Feed our Cities Michael W. Hamm, 2017-01-01 Sustainable Food Systems to Feed City Regions explains potential solutions to some of the most challenging questions about how our food systems will feed our city region populations in the future Climate change water stresses energy use and demographic shifts will but continued pressure on the U S food and agricultural system A growing global middle class and large population shifts to cities in the global south will add to the stresses on the U S food system Since most of the U S population lives in city regions it is timely to consider how people in city regions across the U S and the globe will be sustainably fed No other book has used an evidence based approach to examine the volume and types of food or where that food could come from while laying out a strategy that addresses the environmental energy and personal food security issues we face In Sustainable Food Systems to Feed City Regions Dr Michael Hamm approaches these challenging questions in a way that helps us become more resilient and secure How will people in these cities all have access to a daily healthy diet Where will their food come from How will we manage the increased amounts of urban human and food waste How will climate change and fresh water challenges impact food security in cities across the U S How do we move to food systems that are increasingly more sustainable and resilient in the face of increasing climatic uncertainty Explains sustainable and resilient food systems for city regions from a variety of perspectives Covers the agricultural aspects of feeding cities as well as issues of natural resources climate change diet and dietary guidelines and food justice Takes a highly data driven approach using approachable explanations supported by well referenced scientific research

Towards Sustainable Global Food Systems Ruerd Ruben, Jan Verhagen, 2019-04-30 One of the major knowledge challenges in the domain of Resilient and Sustainable Food Systems refers to the integration of perspectives on consumption patterns that support public health inclusive value chains and environmentally sustainable food production While there is a long record of the analysis of separate interventions this special issue generates integrated insights provides cross cutting perspectives and outlines practical and policy solutions that address these global challenges The collection of papers promotes the view that sustainable food systems require thorough insights into the structure and dynamics of agri food production systems the drivers for integrating food value chains and markets and key incentives for supporting healthier consumer choices On the production side potential linkages between agricultural commercialization and intensification and their effects for food security and nutritional outcomes are analyzed Value Chains are assessed for their contribution to improving exchange networks and markets for food products that simultaneously support efficiency circularity and responsiveness Individual motives and market structures for food consumption need to be understood in order

to be able to outline suitable incentives to enhance healthy dietary choice The contributed papers focus on interfaces between food system activities and processes of adaptive change that are critical for overcoming key constraints and trade offs between sustainable food and healthy diets
