Swarming And The Future Of Conflict:

Swarming & the Future of Conflict John Arquilla,David F. Ronfeldt,2000 Swarming is a seemingly amorphous but deliberately structured coordinated strategic way to perform military strikes from all directions It employs a sustainable pulsing of force and or fire that is directed from both close in and stand off positions It will work best perhaps it will only work if it is designed mainly around the deployment of myriad small dispersed networked maneuver units This calls for an organizational redesign involving the creation of platoon like pods joined in company like clusters that would keep but retool the most basic military unit structures It is similar to the corporate redesign principle of flattening which often removes or redesigns middle layers of management This has proven successful in the ongoing revolution in business affairs and may prove equally useful in the military realm *Swarming and the Future of Conflict* ,2000 Swarming is seemingly amorphous but it is a deliberately structured coordinated strategic way to strike from all directions by means of a sustainable pulsing of force and or fire close in as well as from stand off positions It will work best perhaps it will only work if it is designed mainly around the deployment of myriad small dispersed networked maneuver units what we call pods organized in clusters Developing a swarming force implies among other things radical changes in current military organizational structures From command and control of line units to logistics profound shifts will have to occur to nurture this new way of war Our study examines the benefits and also the costs and risks of engaging in such serious doctrinal change Examples of swarming can be found throughout history but it is only now able to emerge as a doctrine in its own right That is largely because swarming depends on a devolution of power to small units and a capacity to interconnect those units that has only recently become feasible due to the information revolution *Swarming & the Future of Conflict* Beth J. Asch,James N. Dertouzos,John Arquilla,Kevin F. McCarthy,Maren Leed,2000 *Unmapping the 21st Century* Nicholas Michelsen,Neville Bolt,2022-07-28 Drawing on post structural political theory this book explores two dominant concepts used to make sense of our disturbed reality the state and the network In seeking a better understanding of today s world this book argues that we need to pull apart the familiar lines of our maps By looking beneath and across these lines an unmapping presents new insights and opportunities for a better future **Over 40 Publications / Studies Combined: UAS / UAV / Drone Swarm Technology Research** , **Swarming and the Future of Warfare** Sean J. A. Edwards,2005 Swarming occurs when several military units conduct a convergent attack on a target from multiple axes The author derives a simple theory that explains the phenomenology of swarming He considers command and control communications home field advantage surprise fratricide and training and identifies the primary variables to most important successful swarming **Non-state Threats and Future Wars** Robert J. Bunker,2012-11-12 The intent behind this book was to bring together a team of defence and national security scholars and real world military and law enforcement operators to focus on the topic of Non State Threats and Future Wars The book is divided into four main sections The first concerns theory The second section concerns non state threats and case

studies providing an overview of non state threats ranging from organized crime networks to cartels gangs and warlords The third section is based on counter OPFOR opposing force strategies which detail advanced concepts urban battlespace environmental perceptions weaponry intelligence preparation networked force structure and C41 The fourth and final section contains an archival document from the late 1987 period concerning early Fourth Epoch War theory and never before published interviews with Chechen commanders and officers who participated in combat operations against Russian forces in the 1994 96 war   The Sensorium of the Drone and Communities Kathrin Maurer,2023-10-03 A comprehensive overview of how civilian drones sense the world and how they build the aesthetic imaginaries of our communities Drone technology has garnered critical attention across many fields from engineering to the humanities While the first wave of drone scholarship was key in initiating the debate on drones it also privileged the idea of the scopic regime a militarized regime of hypervisuality in its analyses of the connection between vision and power The Sensorium of the Drone and Communities broadens the drone s spectrum of perception by acknowledging its creative life affirming possibility with the notion of the sensorium The sensorium of the drone is a multimedia synesthetic sensing assemblage in which the human agent is enmeshed with the drone Drone sensoria can sense in many more ways than the scopic regime with sound touch smell temperature and movement In The Sensorium of the Drone and Communities Kathrin Maurer shows how drone sensoria can change our understanding of human communities by constructing imaginaries of social communities based on decentralized and fluid sensing processes Maurer takes an aesthetic approach to technology working with two understandings of aesthetics One understanding refers to aesthetics as a way of experiencing and it explores how the drone human assemblage perceives the world The other refers to aesthetic mimetic representation and focuses on how aesthetic drone imaginaries in literature popular culture visual arts and films negotiate the sensorial technology of the drone Bringing together key ideas in technology studies studies of aerial views visual and aesthetic studies posthuman sensing machine human interaction and communities The Sensorium of the Drone and Communities sheds a welcome and necessary light on this technology s creative potential as well as its dangers and risks   *Next War* John F. Antal,2023-09-28 a useful addition to the literature of the changing character of war Its scoping and focus and its application of the identified disrupters to current challenges offer immediate insights for today s commanders and defence policymakers The Wavell Room The nature of war is constant change We live in an era of exponential technological acceleration which is transforming how wars are waged Today the battlespace is transparent multi domain sensors can see anything and long range precision fire can target everything that is observed Autonomous weapons can be unleashed into the battlespace and attack any target from above hitting the weakest point of tanks and armored vehicles The velocity of war is hyper fast Battle shock is the operational informational and organizational paralysis induced by the rapid convergence of key disrupters in the battlespace It occurs when the tempo of operations is so fast and the means so overwhelming that the enemy cannot think decide or act in time Hit with too many

attacks in multiple domains all occurring simultaneously the enemy is paralyzed In short the keys to decisive victory in war is to generate battle shock Imagine a peer fight against Communist China a new war in Europe against a resurgent Russia or a conflict against Iran in the Middle East How can our forces survive an enemy first strike in these circumstances Can we adapt to the ever accelerating tempo of war Will our forces be able to mask from enemy sensors How will leaders execute command and control in a degraded communications environment Will our command posts survive Will our commanders see and understand what is happening in order to plan decide and act in real time This book addresses these tough questions and more *Reimagining War in the 21st Century* Manabrata Guha,2010-09-13 This book interrogates the philosophical backdrop of Clausewitzian notions of war and asks whether modern network centric militaries can still be said to serve the political In light of the emerging theories and doctrines of Network Centric War NCW this book traces the philosophical backdrop against which the more common theorizations of war and its conduct take place Tracing the historical and philosophical roots of modern war from the 17th Century through to the present day this book reveals that far from paralyzing the project of re problematisating war the emergence of NCW affords us an opportunity to rethink war in new and philosophically challenging ways This book will be of much interest to students of critical security studies social theory war studies and political theory IR Manabrata Guha is Assistant Professor ISSSP at the National Institute of Advanced Studies Bangalore India   Networks, Terrorism and Global Insurgency Robert J. Bunker,2014-03-05 This new book brings together leading terrorism scholars and defence professionals to discuss the impact of networks on conflict and war Post modern terrorism and topics of global insurgency are also comprehensively covered The text is divided into four sections to cover the key areas introductory overview theory terrorism and global insurgency Al Qaeda focus and networks Eminent contributors include John Arquilla and David Ronfeldt Brian Jenkins Stephen Sloan Graham Turbiville and Max Manwaring This book was previously published as a special issue of the leading journal Low Intensity Conflict and Law Enforcement   *The Future of War* Lawrence Freedman,2017-10-10 An award winning military historian professor and political adviser delivers the definitive story of warfare in all its guises and applications showing what has driven and continues to drive this uniquely human form of political violence Questions about the future of war are a regular feature of political debate strategic analysis and popular fiction Where should we look for new dangers What cunning plans might an aggressor have in mind What are the best forms of defense How might peace be preserved or conflict resolved From the French rout at Sedan in 1870 to the relentless contemporary insurgencies in Iraq and Afghanistan Lawrence Freedman a world renowned military thinker reveals how most claims from the military futurists are wrong But they remain influential nonetheless Freedman shows how those who have imagined future war have often had an idealized notion of it as confined brief and decisive and have regularly taken insufficient account of the possibility of long wars hence the stubborn persistence of the idea of a knockout blow whether through a dashing land offensive nuclear first strike or cyberattack He also notes the lack of attention paid to civil wars until

the West began to intervene in them during the 1990s and how the boundaries between peace and war between the military the civilian and the criminal are becoming increasingly blurred Freedman s account of a century and a half of warfare and the often misconceived thinking that precedes war is a challenge to hawks and doves alike and puts current strategic thinking into a bracing historical perspective **The Scientific Way of Warfare** Antoine J. Bousquet,2022-06-15 Bousquet s landmark book examines the impact of key technologies and scientific ideas on the theory and practice of warfare and the handling of the perennial tension between order and chaos on the battlefield Spanning the entire modern era from the Scientific Revolution to the present it offers a systematic account of modern warfare as the constitution of increasingly complex assemblages of bodies and machines whose integration rests upon a military assimilation of scientific thought Reflecting the pervasive influence of scientific conceptual frameworks upon warfare modern armies have been successively organised by reference to the paradigmatic technologies of the clock engine computer and network Conversely major scientific developments and technological breakthroughs have become intertwined with the experience of war especially since the Second World War s unprecedented mobilisation of scientific rationality and technical expertise This increasingly tight symbiosis between science technology and war is at the heart of both the tremendous powers and enduring pathologies displayed by the contemporary military machine In this new and revised edition Bousquet extends the analysis to encompass the latest developments in the scientific way of warfare in the midst of renewed great power competition and a wave of technological innovation in artificial intelligence and robotics *Professional Journal of the United States Army* ,2013

The Eye of War Antoine Bousquet,2018-10-09 How perceptual technologies have shaped the history of war from the Renaissance to the present From ubiquitous surveillance to drone strikes that put warheads onto foreheads we live in a world of globalized individualized targeting The perils are great In The Eye of War Antoine Bousquet provides both a sweeping historical overview of military perception technologies and a disquieting lens on a world that is increasingly one in which anything or anyone that can be perceived can be destroyed in which to see is to destroy Arguing that modern day global targeting is dissolving the conventionally bounded spaces of armed conflict Bousquet shows that over several centuries a logistical order of militarized perception has come into ascendancy bringing perception and annihilation into ever closer alignment The efforts deployed to evade this deadly visibility have correspondingly intensified yielding practices of radical concealment that presage a wholesale disappearance of the customary space of the battlefield Beginning with the Renaissance s fateful discovery of linear perspective The Eye of War discloses the entanglement of the sciences and techniques of perception representation and localization in the modern era amid the perpetual quest for military superiority In a survey that ranges from the telescope aerial photograph and gridded map to radar digital imaging and the geographic information system Bousquet shows how successive technological systems have profoundly shaped the history of warfare and the experience of soldiering A work of grand historical sweep and remarkable analytical power The Eye of War explores the implications of militarized perception for the character of war in the twenty first century and the place of human subjects within its increasingly technical armature **Game of Drones** Jürgen Bleibler,Claudia Emmert,Goetz Herrmann,Maximilian Jablonowski,Francisco Klauser,Kathrin Maurer,Ina Neddermeyer,Marcela Suarez Estrada,Jutta Weber,2020-08-19 Drohnen sind unbemannte Flugobjekte deren Gr en so unterschiedlich sind wie ihr Aussehen und ihre Nutzung Eingesetzt werden sie f r unterschiedlichste zivile Zwecke u a um schwer zug ngliche Gebiete zu erreichen zur Kontrolle von Grenzen berwachung Datensammlung sowie in der Landwirtschaft und im Dienstleistungssektor Sie liefern K nstler innen Fotograf innen und Filmemacher innen eindrucksvolle Aufnahmen und haben die Bild sthetik der Gegenwart revolutioniert Drohnen gelten aber auch als die wichtigste Kriegstechnologie seit der Erfindung der Atombombe Gegenw rtig sind Drohnen noch keine autonom operierenden Systeme in Kombination mit K nstlicher Intelligenz k nnen sie aber zu unheimlichen Waffen werden Dieser Ausbau zu lernenden und autonom agierenden Maschinen wirft auch ethische Fragen auf Die Publikation f hrt die Inhalte der Ausstellung Game of Drones Von unbemannten Flugobjekten und einer Fachtagung im Zeppelin Museum Friedrichshafen zusammen die verschiedene Aspekte historischer aktueller und zuk nftiger Drohnentechnologien in vertiefter Form analysieren Verhandelt wurden gesellschaftlich relevante Fragestellungen anhand technikhistorischer Exponate und ausgew
