Scientific and Technical Information Division,1989 *Living Off the Land in Space* C Bangs,Greg Matloff,Les Johnson,2007-08-24 Human civilization has evolved to the point at which we can consider tapping space resources and expanding beyond Earth s atmosphere The Introduction surveys possible motivations for large scale human emigration to space Since our early ancestors began to move out of Africa humans have constantly expanded their range Today the pattern of human settlement extends from pole to pole Humans regularly visit the upper troposphere and ocean floor and technology has enabled a few to even reside above the atmosphere in space stations For the next few millennia at least barring breakthroughs the human frontier will include the solar system and the nearest stars Will it better to settle the Moon Mars or a nearby asteroid and what environments can we expect to find in the vicinity of nearby stars are questions that need to be answered if mankind is to migrate into space **Space Resources: Scenarios** United States. National Aeronautics and Space Administration. Scientific and Technical Information Program,1992 **Pushing Our Limits** Mark Nelson,2018-02-27 Pushing Our Limits is a fresh examination of Biosphere 2 the world s first man made mini world twenty five years after its first closure experiment Author Mark Nelson one of the eight crew members locked in the enclosure during the 1991 1993 experiment offers a compelling insider s view of the dramatic story behind Biosphere 2 Biosphere 2 helped change public understanding of what our global biosphere is and how it provides for our health and well being However the experiment is often dismissed as a failure and news outlets at the time focused on interpersonal conflicts and unexpected problems that arose Delving past the sensationalism Nelson presents the goals and results of the experiment addresses the implications of the project for our global situation and discusses how the project s challenges and successes can change our thinking about Biosphere 1 the Earth Pushing Our Limits offers insights from the project that can help us deal with our global ecological challenges It also shows the intense and fulfilling connection the biospherians felt with their life support system and how this led to their vigilant attention to its needs With current concerns of sustainability and protection of our global biosphere as well as the challenge of learning how to support life in space and on Mars the largest longest and most important experiment in closed ecosystems is more relevant than ever The book explores Biosphere 2 s lessons for changing technology to support and not destroy nature and for reconnecting people to a healthy relationship with nature **NASA SP-7500** United States.
