Peterson, Barbara Gillam, H. A. Sedgwick, 2007-01-04 How can we best describe the processes by which we visually perceive our environment Contemporary perceptual theory still lacks a coherent theoretical position that encompasses both the limitations on the information that can be retained from a single eye fixation and the abundant phenomenal and behavioral evidence for the perception of an extended and coherent world As a result many leading theorists and researchers in visual perception are turning with new or renewed interest to the work of Julian Hochberg For over 50 years in his own experimental research in his detailed consideration of examples drawn from a wide range of visual experiences and activities and most of all in his brilliant and sophisticated theoretical analyses Hochberg has persistently engaged with the myriad problems inherent in working out the kind of coherent theoretical position the field currently lacks The complexity of his thought and the wide range of areas into which Hochberg has pursued the solution to this central problem have however limited both the accessibility of his work and the appreciation of his accomplishment In this volume we seek to bring the full range of Hochberg's work to the attention of a wider audience by offering a selection of his key works many taken from out of print or relatively inaccessible sources To facilitate the understanding of his accomplishment and of what his work has to offer to contemporary researchers and theorists in visual perception we include commentaries on salient aspects of his work by 20 noted researchers *In the Mind's Eye* will be of interest to researchers working on topics such as perceptual organization visual attention space perception motion perception visual cognition the relationship between perception and action picture perception and film who are striving to obtain a deeper understanding of their own fields and who want to integrate this understanding into a broader unified view of visual perceptual processing *The Future of the Brain* Steven Peter Russell Rose, 2006 A leading scientist offers a unique perspective on the past present and future of neuroscience and the brain 40

interest in human and animal behaviour with the sorts of models and theories that are used by academic psychologists Part 1 covers the main areas of psychological endeavour seeking to provide engaging examples of psychological questions rather than to provide an exhaustive account Part 2 addresses the business of living and studying at university inviting the reader to reflect on what psychology has to say about being a student *Perception* ,2007 *The Spectator* ,2004 *The 21st-century Brain* Steven Peter Russell Rose,2005 This is a compelling and authoritative study of the brain its past present and future The human brain is the most complex structure in the known universe How it works the relationship between mind and brain is one of the most important of scientific questions Researchers now claim to be able to explain the roots of human personality and behaviour and this new knowledge brings potential new powers to cure mental illnesses to control behaviour through tailor made drugs to develop human machine hybrids But just how seriously should we take these new threats and promises In order to tackle these issues Steven Rose explores the evolutionary route by which brains emerged from the origin of life to today s complex societies He also investigates how brains develop from a single fertilised egg to the incredibly complex organ that each human possesses Against this background he asks the challenging question what does the future hold for the human brain ***The Psychologist*** ,2006 *Book Review Index Cumulation* Dana Ferguson,2005-09 Book Review Index provides quick access to reviews of books periodicals books on tape and electronic media representing a wide range of popular academic and professional interests The up to date coverage wide scope and inclusion of citations for both newly published and older materials make Book Review Index an exceptionally useful reference tool More than 600 publications are indexed including journals and national general interest publications and newspapers Book Review Index is available in a three issue subscription covering the current year or as an annual cumulation covering the past year
