**Early Identification of Children at Risk** R.N. Emde, W.K. Frankenburg, J. Sullivan, 2013-12-01 This volume contains contributions that are interdisciplinary and international The editors believe this is an especially timely and promising

enterprise for both sources of diversity are needed for improving our abilities to identify the young child at risk and to prevent disability In terms of disciplines the volume brings together papers by health care providers such as pediatricians and public health nurses as well as educators and psychologists Each of these groups works in dissimilar settings and faces dissimilar problems Health care providers seek simple identification procedures for use in busy primary care settings psychologists emphasize well constructed research designs and educators reflect the need for early identification and education Each of these specialist groups has something to offer the other but too often each tends to limit its publications and readings to its own discipline thus failing to capitalize on a wider scope of knowledge and practice We hope that this selection of papers will allow all readers addressing the early identification of children at risk to generate a more integrated interdisciplinary perspective We also hope this volume reflects the sense of excitement that we feel from a sharing of international perspectives There is no single approach to the early identification of children at risk that is universally applicable to all countries In addition approaches within each country vary because of availability of financial and human resources and differing expectations of local communities

Card, James P. Selig, Todd Little, 2011-04-12 This book reviews methods of conceptualizing measuring and analyzing interdependent data in developmental and behavioral sciences Quantitative and developmental experts describe best practices for modeling interdependent data that stem from interactions within families relationships and peer groups for example Complex models for analyzing longitudinal data such as growth curves and time series are also presented Many contributors are innovators of the techniques and all are able to clearly explain the methodologies and their practical problems including issues of measurement missing data power and sample size and the specific limitations of each method Featuring a balance between analytic strategies and applications the book addresses The Actor Partner Interdependence Model for analyzing influence between two individuals The Intraclass Correlational Approach for analyzing distinguishable roles parent child or exchangeable same sex dyadic data The Social Relations Model for analyzing group interdependency Social Network Analysis approaches for relationships between individuals This book is intended for graduate students and researchers across the developmental social behavioral and educational sciences It is an excellent research guide and a valuable resource for advanced methods courses      Knowing Children Michael Siegal, 2013-05-13 It has often been maintained that young children s knowledge is limited to perceptual appearances In this preoperational stage of development there are profound conceptual limitations in that they have little understanding of numerical and causal relations and are incapable of insight into the minds of others Their apparent inability to perform well on traditional developmental measures has led researchers to accept a model of the young child as plagued by conceptual deficits These ideas have had a major impact on educational programs Many have accepted the view that the young are not ready for instruction and that their memory and understanding is vulnerable to distortion especially in subjects such as mathematics and science However the second edition of this book provides further evidence that children s stage like performance can frequently be reinterpreted in terms of a clash between the conversational worlds of adults and children In many settings children may not share an adult s well meaning purpose or use of words in questioning Under these conditions they do not disclose the depth of their memory and understanding and may respond incorrectly even when they are certain of the right answer In this light a different model of development emerges with significant implications for instruction in educational health and legal settings
