## **Space And Time Scale Variability And Interdependencies In Hydrological Processes:**

**Space and Time Scale Variability and Interdependencies in Hydrological Processes** R. A. Feddes, 1995-08-24 This book presents the integrated contributions of hydrologists meteorologists and ecologists to the first IHP IAHS George Kovacs Colloquium in connection with the study of global hydrology and climate change The atmospheric hydrological and terrestrial components of the Earth's systems operate on different time and space scales Resolving these scaling incongruities as well as understanding and modelling the complex interaction of land surface processes at the different scales represent a major challenge for hydrologists ecologists and meteorological scientists alike This book deals with time and space scale variations with reference to several topics including soil water balance ecosystems and interaction of flow systems and macroscale hydrological modelling This book will be of great use to researchers engineers and forecasters with an interest in space and time scale variability

Hydrological Modelling in Arid and Semi-Arid Areas Howard Wheeler, Soroosh Sorooshian, K. D. Sharma, 2007-11-22 Arid and semi arid regions are defined as areas where water is at its most scarce The hydrological regime in these areas is extreme and highly variable and they face great pressures to deliver and manage freshwater resources However there is no guidance on the decision support tools that are needed to underpin flood and water resource management in arid areas UNESCO initiated the Global network for Water and Development Information for arid lands GWADI and arranged a workshop of the world's leading experts to discuss these issues This book presents chapters from contributors to the workshop and includes case studies from the world's major arid regions to demonstrate model applications and web links to tutorials and state of the art modelling software This volume is a valuable reference for researchers and engineers working on the water resources of arid and semi arid regions

Floods in a Changing Climate P. P. Mujumdar, D. Nagesh

Kumar, 2012-11-22 Provides unique synthesis of various modeling methodologies used to aid planning and operational decision making for academic researchers and professionals

Water Ecosystem Services Julia Martin-Ortega, 2015-03-26 This book uses ecosystem services based approaches to address major global and regional water challenges for researchers students and policy makers

**Climate Changes during the Holocene and their Impact on Hydrological Systems** Arie S. Issar, 2004-08-05 It is now widely accepted that increasing concentrations of greenhouse gases in the atmosphere are causing higher global atmospheric temperatures However there is still a great deal of uncertainty about the likely effects of

such a temperature rise on climate and even more about the impacts of climate change and variability on the world's hydrological regimes and socio-economic systems. Studying the effects of climate variability in the past can give clues as to possible future effects. This volume provides a comprehensive review of the effects of climate variability on hydrological and human systems in the Holocene, the last 10 000 years in various parts of the world. The book concentrates on the regions bordering the Mediterranean Sea, western and central Europe, China, Japan, West and South Africa, and the southwestern USA. This book will be of value to researchers and professionals in hydrology, climatology, geology, and historical geography.

*Managing and Transforming Water Conflicts* Jerome Delli Prisco, Aaron T. Wolf, 2010-02-04. What is the one thing that no one can do without? Water. Where water crosses boundaries, be they economic, legal, political, or cultural, the stage is set for disputes between different users trying to safeguard access to a vital resource while protecting the natural environment. Without strategies to anticipate, address, and mediate between competing users, intractable water conflicts are likely to become more frequent, more intense, and more disruptive around the world. In this book, Delli Prisco and Wolf investigate the dynamics of water conflict and conflict resolution from the local to the international. They explore the inexorable links between three facets of conflict management and transformation: Alternative Dispute Resolution (ADR), public participation, and institutional capacity. This practical guide will be invaluable to water management professionals as well as to researchers and students in engineering, economics, geography, geology, and political science who are involved in any aspects of water management.

**Frameworks for Water Law Reform** Sarah Hendry, 2015. This book develops an analytical framework for water law reform using case studies across four jurisdictions for academics, students, and policy makers.

**Floods in a Changing Climate** Giuliano Di Baldassarre, 2012-11-22. Flood inundation models enable us to make hazard predictions for floodplains, mitigating increasing flood fatalities and losses. This book provides an understanding of hydraulic modelling and floodplain dynamics with a key focus on state-of-the-art remote sensing data and methods to estimate and communicate uncertainty. Academic researchers in the fields of hydrology, climate change, environmental science, and natural hazards, and professionals and policy makers working in flood risk mitigation, hydraulic engineering, and remote sensing will find this an invaluable resource. This volume is the third in a collection of four books on flood disaster management theory and practice within the context of anthropogenic climate change. The others are: *Floods in a Changing Climate: Extreme Precipitation* by Ramesh Teegavarapu; *Floods in a Changing Climate: Hydrological Modeling* by P. P. Mujumdar and D. Nagesh Kumar; and *Floods in a Changing Climate: Risk Management* by Slodoban Simonović.

*Floods in a Changing Climate* Slobodan P. Simonović, 2012-11-22. Provides a flood risk management framework for identifying and assessing climate-related risks and developing adaptation responses for academic researchers and professionals.

**Floods in a Changing Climate** Ramesh S. V. Teegavarapu, 2012-11-22. Measurement analysis and modeling of extreme precipitation events linked to floods is vital in understanding changing climate impacts and variability. This book provides methods for assessment of the trends in these

events and their impacts It also provides a basis to develop procedures and guidelines for climate adaptive hydrologic engineering Academic researchers in the fields of hydrology climate change meteorology environmental policy and risk assessment and professionals and policy makers working in hazard mitigation water resources engineering and climate adaptation will find this an invaluable resource This volume is the first in a collection of four books on flood disaster management theory and practice within the context of anthropogenic climate change The others are Floods in a Changing Climate Hydrological Modeling by P P Mujumdar and D Nagesh Kumar Floods in a Changing Climate Inundation Modeling by Giuliano Di Baldassarre and Floods in a Changing Climate Risk Management by Slodoban Simonovi
