analysts executives entrepreneurs and founders have been waiting for Mirror Worlds David Gelernter,1993-01-28

Technology doesn't flow smoothly it's the big surprises that matter and Yale computer expert David Gelernter sees one such giant leap right on the horizon Today's small scale software programs are about to be joined by vast public software works that will revolutionize computing and transform society as a whole One such vast program is the Mirror World Imagine looking at your computer screen and seeing reality an image of your city for instance complete with moving traffic patterns or a picture that sketches the state of an entire far flung corporation at this second These representations are called Mirror Worlds and according to Gelernter they will soon be available to everyone Mirror Worlds are high tech voodoo dolls by interacting with the images you interact with reality Indeed Mirror Worlds will revolutionize the use of computers transforming them from mere handy tools to crystal balls which will allow us to see the world more vividly and see into it more deeply Reality will be replaced gradually piece by piece by a software imitation we will live inside the imitation and the surprising thing is this will be a great humanistic advance We gain control over our world plus a huge new measure of insight and vision In this fascinating book part speculation part explanation Gelernter takes us on a tour of the computer technology of the near future Mirror Worlds he contends will allow us to explore the world in unprecedented depth and detail without ever changing out of our pajamas A hospital administrator might wander through an entire medical complex via a desktop computer Any citizen might explore the performance of the local schools chat electronically with teachers and other Mirror World visitors plant software agents to report back on interesting topics decide to run for the local school board hire a campaign manager and conduct the better part of the campaign itself all by interacting with the Mirror World Gelernter doesn't just speculate about how this amazing new software will be used he shows us how it will be made explaining carefully and in detail how to build a Mirror World using technology already available We learn about disembodied machines trellises ensembles and other computer components which sound obscure but which Gelernter explains using familiar metaphors and terms He tells us that a Mirror World is a microcosm just like a Japanese garden or a Gothic cathedral and that a computer program is translated by the computer in the same way a symphony is translated by a violinist into music Mirror Worlds offers a lucid and humanistic account of the coming software revolution told by a computer scientist at the cutting edge of his field *DB2 Essentials* Raul F. Chong, Clara Liu, 2013 This book covers everything you need to get productive with the latest version of IBM DB2 and apply it to today's business challenges It discusses key features introduced in DB2 Versions 10.5, 10.1 and 9.7 including improvements in manageability integration security Big Data support BLU Acceleration and cloud computing This book is for anyone who plans to work with DB2 including DBAs system administrators developers and consultants It will be a great resource whether you're upgrading from an older version of DB2 migrating from a competitive database or learning your first database platform *Big Data for Qualitative Research* Kathy A. The Data Dialogues Martyn Richard Jones, 2025-07-25 The world of data information and knowledge is not merely technical It is cultural Philosophical Even spiritual at times It offers the promise of precision in an age of confusion a kind of sacred geometry hiding within spreadsheets APIs and machine learning models At its best this world stretches the human mind challenging how we define truth how we negotiate complexity and how we reconcile seemingly irreconcilable contradictions It is the domain of paradox and possibility But if that sounds a little too poetic for a tech column it s because the real story of data today is more conflicted and more compromised Beneath the surface of the data revolution where we are supposedly unlocking insight at scale and democratising analytics lies a darker current One of opportunism one of illusion The world of data is not just full of brilliant engineers and thoughtful

epistemologists it s also teeming with chancers charlatans and con artists A rogues gallery of pitch deck hustlers and clickbait futurists A carnival of snake oil salesmen dressed in TED Talk casual hawking AI powered this and cloud native that with all the depth of a bumper sticker We are in the middle of a data gold rush and like every gold rush in history it has attracted not just pioneers but profiteers
