## Spaces Of Constant Curvature:

Spaces of Constant Curvature Joseph A. Wolf, 2023-06-05 This book is the sixth edition of the classic Spaces of Constant Curvature first published in 1967 with the previous fifth edition published in 1984 It illustrates the high degree of interplay between group theory and geometry The reader will benefit from the very concise treatments of riemannian and pseudo riemannian manifolds and their curvatures of the representation theory of finite groups and of indications of recent progress in discrete subgroups of Lie groups Part I is a brief introduction to differentiable manifolds covering spaces and riemannian and pseudo riemannian geometry It also contains a certain amount of introductory material on symmetry groups and space forms indicating the direction of the later chapters Part II is an updated treatment of euclidean space form Part III is Wolf's classic solution to the Clifford Klein Spherical Space Form Problem It starts with an exposition of the representation theory of finite groups Part IV introduces riemannian symmetric spaces and extends considerations of spherical space forms to space forms of riemannian symmetric spaces Finally Part V examines space form problems on pseudo riemannian symmetric spaces At the end of Chapter 12 there is a new appendix describing some of the recent work on discrete subgroups of Lie groups with application to space forms of pseudo riemannian symmetric spaces Additional references have been added to this sixth edition as well

Vinberg, 2014-03-12 A very clear account of the subject from the viewpoints of elementary geometry Riemannian geometry and group theory a book with no rival in the literature Mostly accessible to first year students in mathematics the book also includes very recent results which will be of interest to researchers in this field *Geometry II* E.B. Vinberg, 2013-04-17 Spaces of constant curvature i.e Euclidean space the sphere and Lobachevskij space occupy a special place in geometry They are most accessible to our geometric intuition making it possible to develop elementary geometry in a way very similar to that used to create the geometry we learned at school However since its basic notions can be interpreted in different ways this geometry can be applied to objects other than the conventional physical space the original source of our geometric intuition Euclidean geometry has for a long time been deeply rooted in the human mind The same is true of spherical geometry since a sphere can naturally be embedded into a Euclidean space Lobachevskij geometry which in the first fifty years after its discovery had been regarded only as a logically feasible by-product appearing in the investigation of the foundations of geometry has even now despite the fact that it has found its use in numerous applications preserved a kind of exotic and even romantic element This may probably be explained by the permanent cultural and historical impact which the proof of the independence of the Fifth Postulate had on human thought

*Mechanics in Spaces of Constant Curvature* T.G. Vozmischeva, 2013-04-17 Introduction The problem of integrability or nonintegrability of dynamical systems is one of the central problems of mathematics and mechanics Integrable cases are of considerable interest since by examining them one can study general laws of behavior for the solutions of these systems The classical approach to studying dynamical systems assumes a search for explicit formulas for the solutions of motion equations and then their analysis This approach stimulated the development of new areas in mathematics such as the algebraic integration and the theory of elliptic and theta functions In spite of this the qualitative methods of studying dynamical systems are much actual It was Poincare who founded the qualitative theory of differential equations Poincare working out qualitative methods studied the problems of celestial mechanics and cosmology in which it is especially important to understand the behavior of trajectories of motion i.e. the solutions of differential equations at infinite time Namely beginning from Poincare systems of equations in connection with the study of the problems of celestial mechanics the right hand parts of which don't depend explicitly on the independent variable of time i.e. dynamical systems are studied
