**Partitioned Representations** J. Dinsmore, 2013-03-07 Cognitive science is a field that began with the realization that researchers in varied disciplines psychology artificial intelligence linguistics philosophy formal semantics neuroscience and others had taken on a common set of problems in representation and meaning in reasoning and language Nevertheless cognitive science as a whole enjoys no common methodology or theoretical framework and is in danger of becoming even more fragmented with time There are two reasons for this First cognitive science is built on existing methodologies that have different historical origins As a result the psychologist's truth is different from the linguist's truth The artificial intelligence researcher's truth is different from the philosopher's truth The neuroscientist's truth is different from the formal semanticist

s truth All too often there is little or no recognition of the relevance of work in other disciplines to one's own concerns  
Second cognitive scientists tend to develop theories around isolated problems For instance there are theories about how humans categorize concepts about how humans analyze linguistic expressions syntactically about how the English tense system works semantically about how humans reason about space or reason about time about how goal directed problem solving occurs about how the brain computes and so on
