Spatial Orientation Theory Research And Application:

Spatial Orientation Herbert Pick, 2012-12-06 How do people know where in the world they are How do they find their way about These are the sort of questions about spatial orientation with which this book is concerned Staying spatially oriented is a pervasive aspect of all behavior Animals must find their way through their environment searching efficiently for food and returning to their home areas and many species have developed very sophisticated sensing apparatus for helping them do this Even little children know their way around quite complex environments They remember where they put things and are able to retrieve them with little trouble Adults in societies across the world have developed complex navigational systems for helping them find their way over long distances with few distinctive landmarks People across the world use their languages to communicate about spatial orientation in problems of simple direction giving and spatial descriptions as well as problems of long range navigation

Syntax and Semantics of Spatial P Anna Asbury, 2008 The category P belongs to a less studied area in theoretical linguistics which has only recently attracted considerable attention This volume brings together pioneering work on adpositions in spatial relations from different theoretical and cross linguistic perspectives The common theme in these contributions is the complex semantic and syntactic structure of PPs Analyses are presented in several different frameworks and approaches including generative syntax optimality theoretic semantics and syntax formal semantics mathematical modeling lexical syntax and pragmatics Among the languages featured in detail are English German Hebrew Igbo Italian Japanese and Persian This volume will be of interest to students and researchers of formal semantics syntax and language typology as well as scholars with a more general interest in spatial cognition

Spatial Information Theory. Cognitive and Computational Foundations of Geographic Information Science Christian Freksa, David M. Mark, 2003-07-31 The Conference on Spatial Information Theory COSIT grew out of a series of workshops NATO Advanced Study Institutes NSF specialist meetings concerned with cognitive and applied aspects of representing large scale space particularly geographic space In these meetings the need for a well founded theory of spatial information processing was identified The COSIT conference series was established in 1993 as a biennial interdisciplinary European conference on the representation and processing of information about large scale space after a successful international conference on the topic had been organized by Andrew Frank et al in Pisa Italy in 1992 frequently referred to as COSIT zero After two successful European conferences with strong North American participation COSIT 93 held on the Island of Elba Italy COSIT 95 held in Semmering Austria the conference became a truly international enterprise when COSIT 97 was held in the Laurel Highlands Pennsylvania USA COSIT 99 will take place in Stade Germany All aspects of large scale space i.e. spaces too large to be seen from a single vantage point are addressed in the COSIT conferences These include spaces of geographic scale as well as smaller spaces in which humans animals or autonomous robots have to find their way around Spatial information theory also deals with the description of objects processes or events in spatial environments and it forms the foundation for the

construction of Geographic Information Systems GIS and for spatial information and communication system design in general
