BOOK REVIEWS

The Founders of Neurology

Webb Haymaker, M.D., Editor. 1953. Springfield, Illinois: Charles C Thomas, Publisher. 479 pages, 133 illustrations, \$10.50.

This is a most interesting collection of short biographical sketches of 133 neurologists, neuroanatomists, neuropathologists and neurosurgeons, whose work in the past has been of major importance in the development of our present day knowledge of the nervous system and its diseases. Written by 84 prominent living neurologists, and edited by Dr. Webb Haymaker with the collaboration and advice of many more, *The Founders of Neurology* is understandably an uneven book. The biographical sketches range from those of almost telegraphic brevity to a few biographies in which the richness of the prose seems inappropriate. In some instances, the inclusion of unnecessary bibliographic references tends to academic pretentiousness and does not contribute to either ease of reading or literary style. Probably included in an effort "to weave into the text, a running history of neurology" such citations neither add to the biographical interest nor do they, in any way, fulfill their function of presenting even the most abbreviated history of neurology.

Not a few readers will note errors of omission and commission in both the selection of men for inclusion in the book and the choice of biographer for those who are included. This is most understandable when the monumental character of the task is recalled, and it

does not detract from the basic value of the collection but does add to the unevenness of the articles. It is impossible not to compare the present volume with *Neurological Biographies and Addresses* (1936, London, Oxford University Press), which was issued at the opening of the Montreal Neurological Institute. Such a comparison reminds one that biographic brevity and attempts at all-inclusiveness are usually achieved at some expense.

The format and illustrations are excellent. The collection of portraits alone makes the volume a valuable, historical repository. The book would be of most value if it could be used in conjunction with a true history of neurology. As it stands, it is a useful abbreviated biographical dictionary, but the flavor of a true biography is lacking. In no sense of the word is the book truly a history of neurology.

An interesting added feature of this book is the introductory section with short definitions of the European academic terms which are so often mystifying to those whose training and background is entirely American.

The Founders of Neurology is interesting and useful, but leaves the present reviewer unsatisfied and hopeful that a real history of neurology will soon be available.

British Neurology F Clifford Rose, 2011-10-31 Diseases of the nervous system are a relatively small but vitally important part of medicine. There was no scientific basis for diagnosis or treatment until the seventeenth century when Dr Thomas Willis 1621-1675 and his team tackled anatomy by dissection of the nervous system, physiology by animal experiments and pathology by post mortem analysis. It was Willis who first used the word neurology and his team who were among the founders of the Royal Society. Included in Christopher Wren who besides being famous as an architect of London's churches drew the first modern diagram of the human brain. Developments in our knowledge of the nervous system in the following centuries and the unique importance of clinical neurology became globally recognised through the work of Whytt, Heberden, Hughlings Jackson, Gowers and many others. The work and discoveries of these eminent specialists were extended with the introduction of such neurosciences as neurophysiology, neuropathology and neuro radiology and this is the first comprehensive account of a battle with the unknown by determined practitioners.
