[The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition](#) Linda Dalrymple Henderson, 2018-05-18. The long-awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art. In this groundbreaking study, first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception—the curved spaces of non-Euclidean geometry and, most important, a higher fourth dimension of space—were central to the development of modern art. The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher

dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak

The Unconscious as Space Anca Carrington,2024-06-03 The Unconscious as Space explores the experience of being and the practice of psychoanalysis by thinking of the unconscious in mathematical terms Anca Carrington introduces mathematical models of space from dimension theory to algebraic topology and knot theory and considers their immediate psychoanalytic relevance The hypothesis that the unconscious is structured like a space marked by impossibility is then examined Carrington considers the clinical implications with particular focus on the interplay between language and the unconscious as related topological spaces in which movement takes place along knot like pathways The Unconscious as Space will be of appeal to psychotherapists psychoanalysts and mental health professionals in practice and in training
