The Fossil World:

A World of Wounds Nancy J. Manring, 2025-11-04 At the end of the Reagan administration American public opinion polls showed there were no discernible differences based on political party in response to the question Do you consider yourself an environmentalist However in the early 1990s a partisan gulf between conservatives and liberals emerged around environmental issues Today half as many Republicans self identify as environmentalists when compared to Democrats Political stagnation on climate action in turn has led to a growing number of Americans of all ages who experience ecological grief known as solastalgia and eco anxiety a chronic fear of environmental doom These emotions emerged in response to the existential distress associated with living in a world of relentless environmental damage and irreversible ecological losses a world of wounds This book offers an antidote to political frustration and hopelessness Nancy J Manring provides an indispensable analysis of the multi decade conservative war against American environmentalism and maps out realistic strategies for rebuilding a bipartisan environmental movement Nurturing authentic hope in contrast to blind optimism or false promises begins with an unflinching look at both planetary and political realities Choosing authentic hope is an ongoing process that requires emotional honesty courage and action This forceful book serves as both a tool for change and a spirited scholarly intervention

Deep Time Roy Plotnick,2022-01-04 Paleontology is one of the most visible yet most misunderstood fields of science

Children dream of becoming paleontologists when they grow up Museum visitors flock to exhibits on dinosaurs and other prehistoric animals The media reports on fossil discoveries and new clues to mass extinctions Nonetheless misconceptions abound paleontologists are assumed only to be interested in dinosaurs and they are all too often imagined as bearded white men in battered cowboy hats Roy Plotnick provides a behind the scenes look at paleontology as it exists today in all its complexity He explores the field s aims methods and possibilities with an emphasis on the compelling personal stories of the scientists who have made it a career Paleontologists study the entire history of life on Earth they do not only use hammers and chisels to unearth fossils but are just as likely to work with cutting edge computing technology Plotnick presents the big questions about life s history that drive paleontological research and shows why knowledge of Earth s past is essential to understanding present day environmental crises He introduces readers to the diverse group of people of all genders races and international backgrounds who make up the twenty first century paleontology community foregrounding their perspectives and firsthand narratives He also frankly discusses the many challenges that face the profession with key takeaways for aspiring scientists Candid and comprehensive *Explorers of Deep Time* is essential reading for anyone curious about the everyday work of real life paleontologists **Arthur's Home Magazine** ,1853 *The London Lancet* ,1855
