Exposing the Roots of Constructivism R. Scott Smith,2022-10-20 Constructivism dominates over other theories of knowledge in much of western academia especially the humanities and social sciences In Exposing the Roots of Constructivism Nominalism and the Ontology of Knowledge R Scott Smith argues that constructivism is linked to the embrace of nominalism the theory that everything is particular and located in space and time Indeed nominalism is sufficient for a view to be constructivist However the natural sciences still enjoy great prestige from the fact value split They are often perceived as giving us knowledge of the facts of reality and not merely our constructs In contrast ethics and religion which also have been greatly influenced by nominalism usually are perceived as giving us just our constructs and opinions Yet even the natural sciences have embraced nominalism and Smith shows that this will undermine knowledge in those disciplines as well Indeed the author demonstrates that at best nominalism leaves us with only interpretations but at worst it undermines all knowledge whatsoever However there are many clear examples of knowledge we do have in the many different disciplines and therefore those must be due to a different ontology of properties Thus nominalism should be rejected In its place the author defends a kind of Platonic realism about properties **Handbook of Archaeological Theories** R. Alexander

Bentley, Herbert D. G. Maschner, Christopher Chippindale, 2009-09-16 This handbook a companion to the authoritative Handbook of Archaeological Methods gathers original authoritative articles from leading archaeologists on all aspects of the latest thinking about archaeological theory It is the definitive resource for understanding how to think about archaeology
