The respective contributions cover a wide range of topics database and data mining networking and communications Web and Internet of things embedded systems soft computing social network analysis security and privacy optical communication and ubiquitous pervasive computing Many of the papers outline promising future research directions and the book benefits students researchers and professionals alike Further it offers a useful reference guide for newcomers to the field Social **networking For idiots** Donceletta Bellamy, 2010-03-22 **Network Learning and Propagation Dynamics Analysis** Xuzhen Zhu, Fei Xiong, Shirui Pan, Yi Zhang, Ningbo Zhang, 2025-05-08 Many phenomena in the fields of computer science biology sociology and economics can be described as transmission dynamics on complex networks and transmission dynamics mainly includes information transmission disease transmission and computer virus transmission. In many real propagation

phenomena we often want to know their propagation mechanism and law on complex networks as well as their prediction methods and control means Clarifying the above problems allows people to have a clear and comprehensive understanding of the evolution mechanism propagation process and steady state of real phenomena At the same time it also provides some necessary theoretical support for predicting and controlling real systems In recent years many concepts and methods of statistical physics have also been successfully used in the modeling and calculation of complex networks such as statistical mechanics self organization theory critical and phase transition theory seepage theory and so on In complex networks seepage can simulate and describe the growth and evolution characteristics of many natural and social systems Based on the classical network seepage people have carried out a lot of research on the explosive seepage in the process of network growth in recent years Using the seepage method researchers have drawn many conclusions and brought new ideas in the research directions of network propagation and cascade failure Based on these theories many researchers have quantitatively analyzed the influence of many factors on transmission path and transmission mechanism and then discussed the effect of the control strategy Proceedings of the 5th International Conference on Data Science, Machine Learning and Applications; Volume 1 Amit Kumar, Vinit Kumar Gunjan, Sabrina Senatore, Yu-Chen Hu, 2024-10-05 This book Volume 1 includes peer reviewed articles from the 5th International Conference on Data Science Machine Learning and Applications 2023 held at the G Narayanamma Institute of Technology and Sciences Hyderabad on 15 16th December India ICDSMLA is one of the most prestigious conferences conceptualized in the field of Data Science Machine Learning offering in depth information on the latest developments in Artificial Intelligence Machine Learning Soft Computing Human Computer Interaction and various data science machine learning applications It provides a platform for academicians scientists researchers and professionals around the world to showcase broad range of perspectives practices and technical expertise in these fields It offers participants the opportunity to stay informed about the latest developments in data science and machine Green Machine Learning Protocols for Future Communication Networks Saim Ghafoor, Mubashir Husain learning Rehmani, 2023-10-25 Machine learning has shown tremendous benefits in solving complex network problems and providing situation and parameter prediction However heavy resources are required to process and analyze the data which can be done either offline or using edge computing but also requires heavy transmission resources to provide a timely response The need here is to provide lightweight machine learning protocols that can process and analyze the data at run time and provide a timely and efficient response These algorithms have grown in terms of computation and memory requirements due to the availability of large data sets These models algorithms also require high levels of resources such as computing memory communication and storage The focus so far was on producing highly accurate models for these communication networks without considering the energy consumption of these machine learning algorithms For future scalable and sustainable network applications efforts are required toward designing new machine learning protocols and modifying the existing ones

which consume less energy i e green machine learning protocols In other words novel and lightweight green machine learning algorithms protocols are required to reduce energy consumption which can also reduce the carbon footprint To realize the green machine learning protocols this book presents different aspects of green machine learning for future communication networks This book highlights mainly the green machine learning protocols for cellular communication federated learning based models and protocols for Beyond Fifth Generation networks approaches for cloud based communications and Internet of Things This book also highlights the design considerations and challenges for green machine learning protocols for different future applications If You Lead They Will Follow Patrick W.
