Treatise on Geomorphology, 2013-02-27

The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline. The number of peer-reviewed papers published in geomorphic journals has grown steadily for more than two decades, and more importantly, the diversity of authors with respect to geographic location and disciplinary background (geography, geology, ecology, civil engineering, computer science, geographic information science, and others) has expanded dramatically. As more good minds are drawn to geomorphology and the breadth of the peer-reviewed literature grows, an effective summary of contemporary geomorphic knowledge becomes increasingly difficult. The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work, and professionals seeking a concise summary of a particular topic. Information on the historical development of diverse topics within geomorphology provides context for ongoing research, discussion of research strategies, equipment and field methods, laboratory experiments, and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding

research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

relationship between the two through sound statistical methods and in a comparative perspective with other European countries. In so doing it covers an increasingly important topic for universities that affects university funding. It discusses whether university evaluation should be limited to a single factor or consider multiple dimensions of research since academic careers, teaching and awarding degrees are intertwined. The chapters included in the book evaluate teaching and research also taking the gender dimension into account in order to understand where and when gender discrimination occurs in assessment. Divided into five sections, the book analyses the administrative data on the determinants of career completion of university students, increasing precariousness of academic careers especially of young researchers, methods designed to assess research productivity when co-authorship and team production are becoming the standard practice and interrelations between students' achievements and teachers' careers driven by research assessment. It brings together contributions from a large group of economists, statisticians and social scientists working under a project sponsored by ANVUR, the Italian agency for the evaluation of teaching and research of academic institutions. From an international perspective, the findings in this book are particularly interesting because despite low tuition costs, tertiary education in Italy has relatively low enrolment rates and even lower completion rates compared to those in other European and American countries. This book is of interest to researchers of the sociology of education, education policy, public administration, economics and statistics of education and to administrators and policy makers working in the area of higher education. *A History of Risk Science* Terje

Aven, 2025-08-15 Risk has been handled as long as there have been humans on Earth. However, the risk field is a young discipline. Systematic attempts to access and handle risk explicitly, conceptualizing and expressing risk in society, are a recent endeavour. This book presents a history of risk science and risk analysis, highlighting concepts and principles for understanding, assessing, communicating, managing and governing risk. The author presents and discusses key contributions to risk science using a historical lens and from the perspective of a risk scientist. The book strengthens our understanding of what risk science is and how it has evolved by exploring fundamental topics such as risk characterization, risk perception, risk communication, risk handling and decision making, and concludes with reflection on the future of risk science and, in particular, what we can learn from its history. *A History of Risk Science* will be essential reading for risk researchers and graduate students as well as scholars from associated fields applying risk-related analysis to their work.
