Small-scale water supply system (SSS) for remote and rural areas in developing countries Jose Abdon Ordóñez Andrade, 2018-10-23 The Waterbackpack PAUL Portable Aqua Unit for Life Saving is a water treatment unit based on the Ultra Low Pressure Ultrafiltration ULP UF technology and is since 2010 successfully applied as a fast response to get safe water during natural disasters or emergencies in more than 2 000 cases worldwide In addition PAUL has demonstrated that the ULP UF technology can be used in permanent decentralised drinking water supply for remote and rural areas as it is easy to handle and does require neither chemicals nor energy consumption nor spare parts on a regular basis Hence the ULP UF is an appropriate solution in the process of reaching the Sustainable Development Goals SDGs ensure by 2030 access to safe drinking water worldwide However during long term uses and under certain water characteristics the ULP UF faces some operational and maintenance challenges The biofouling adhered to the membrane surface may lead to severe flux reduction In addition some re growth of bacteria may take place on the permeate side because of the presence of high content of natural organic matter NOM in the raw water especially Biopolymer and Humic Acids Therefore the aim of this study was to integrate some appropriate treatment steps before the ULP UF technology so that a reduction of attachment of NOM and biofilm to the membrane could be achieved and thus an increase of permeate flux and a reduction of potential regrowth of bacteria on permeate water could be accomplished

*Assessing sanitary mixtures in East African cities* Sammy C. Letema, 2023-09-04 It has been common for both scientists and policy makers to view sanitary provision as a dichotomy between a centralised and a

decentralised approach Moreover sustainability assessment has also been characterized by a dualistic approach between the techno centric and the eco centric Such views are often simplistic and not in tandem with the existing multiple sanitary options and service providers in East African cities which defy such classification This book provides the theoretical and empirical basis for a third way of classifying and assessing the multiple technical and institutional options to sanitary provision This novel assessment approach called modernised mixtures is used in this book as a tool for conceptualising assessing and improving sanitary provision in East African cities The assessment is based on four social and technical dimensions and three sustainability criteria This inclusive approach in assessing sanitary mixtures benefits decision making among imperfect options Valuing Water, Valuing Livelihoods Kathy Pond,2011-10-24 The aim of Valuing Water Valuing Livelihoods is to give decision makers health professionals and analysts a comprehensive view of the arguments and challenges associated with establishing the value of drinking water interventions The experts who have contributed to this publication provide guidance on assessing the benefits from improving access to safe drinking water and from reducing the burden of water related diseases They show how to compare the value of these benefits to the costs of interventions with special reference to small scale drinking water systems Valuing Water Valuing Livelihoods provides decision makers health professionals and analysts with the tools to promote improved access to safe drinking water especially for small and vulnerable communities in developing countries by presenting comprehensive coverage of principles and practice technology and economics health livelihoods and ethics **Irrigation Technology Transfer in Support of Food Security** Food and Agriculture Organization of the United Nations,1997-01-01 **Desalination Sustainability** Hassan Arafat,2017-06-09 Desalination Sustainability A Technical Socioeconomic and Environmental Approach presents a technical socioeconomic and environmental approach that guides researchers and technology developers on how to quantify the energy efficiency of a proposed desalination process using thermodynamics based tools The book offers the technical reader an understanding of the issues related to desalination sustainability For example technology users such as public utility managers will gain the ability and tools to assess whether or not desalination is a good choice for a city or country Readers will learn new insights on a clear and practical methodology on how to probe the economic feasibility of desalination using simple and effective tools such as levelized cost of water LCOW calculation Decision makers will find this book to be a valuable resource for the preliminary assessment of whether renewable powered desalination is a good choice for their particular setting Presents the issues related to desalination sustainability Guides researchers and technology developers on how to quantify the energy efficiency of a proposed desalination process using thermodynamics based tools Outlines a clear and practical methodology on how to probe the economic feasibility of desalination using simple and effective tools Provides a roadmap for decision makers on the applicability of a desalination process at a particular setting EPA-430/1 ,1979-05 *Handbook of Environmental Engineering* Myer Kutz,2018-07-25 A comprehensive guide for both fundamentals and real world applications

of environmental engineering Written by noted experts Handbook of Environmental Engineering offers a comprehensive guide to environmental engineers who desire to contribute to mitigating problems such as flooding caused by extreme weather events protecting populations in coastal areas threatened by rising sea levels reducing illnesses caused by polluted air soil and water from improperly regulated industrial and transportation activities promoting the safety of the food supply Contributors not only cover such timely environmental topics related to soils water and air minimizing pollution created by industrial plants and processes and managing wastewater hazardous solid and other industrial wastes but also treat such vital topics as porous pavement design aerosol measurements noise pollution control and industrial waste auditing This important handbook Enables environmental engineers to treat problems in systematic ways Discusses climate issues in ways useful for environmental engineers Covers up to date measurement techniques important in environmental engineering Reviews current developments in environmental law for environmental engineers Includes information on water quality and wastewater engineering Informs environmental engineers about methods of dealing with industrial and municipal waste including hazardous waste Designed for use by practitioners students and researchers Handbook of Environmental Engineering contains the most recent information to enable a clear understanding of major environmental issues

*Pro-Poor Strategies in Urban Water Provisioning* Akosua Sarpong Boakye-Ansah, 2021-02-25 Water utilities are the main instrument for countries to achieve universal service coverage In pursuing universal service coverage water utilities have turned to pro poor water services to extend water services in low income areas This thesis discusses the use of pro poor water services by water utilities in Kenya with the intention of highlighting the dimensions of the approach that require attention of policy makers and practitioners when engaging with the concept Based on the analysis of the technologies financial and organisational arrangements associated with the pro poor concept this thesis shows that the use of pro poor strategies allows water utilities to reduce the risks of servicing low income areas while still claiming to fulfil their mandate of providing access to all in a commercially viable manner The analysis also shows that rather than a decision of the water utility the choice for pro poor strategies emerges as the result of a consensus or compromise between the different actors that constitute the broader institutional environment in which water utilities operate The thesis concludes that while pro poor water services may serve the interests of water utilities and other stakeholders in the absence of well directed subsidies and proper monitoring they will not result in low income households benefiting from more affordable and reliable access to water

Aquaculture Technology in Developing Countries Randall E. Brummett, 2016-04-08 Aquaculture technology has been evolving rapidly over the last two decades led by an increasingly skilled cadre of researchers in developing countries Rather than copying or adapting work done in industrialized countries to their situations these scientists are moving aquaculture research out of the box to explore species and production systems relevant to their natural resources economies and social institutions Studies from India Latin America the Middle East and Africa are highlighted in this collection of

papers covering the entire gamut of aquaculture science from comparison of tilapia breeds novel feed ingredients for indigenous species improving disease resistance water use efficiency traditional farming systems spatial planning and economics More than a how to book this volume introduces the researchers and institutions leading the development of aquaculture as it expands into new frontiers This book was based on a special issue of the Journal of Applied Aquaculture
