Nunn, 2010 This book is aimed at researchers and graduate students in neuroscience evolutionary biology and biological anthropology and to biomedical researchers studying sleep medicine **Understanding Sleep and Dreaming** William H. Moorcroft, 2013-03-25 An updated edition of Moorcroft's 2003 volume this new work reflects recent scientific advances in the area of sleep and disorders As in the previous book *Understanding Sleep and Dreaming* this new edition serves as a compact overview for now sleep experts covering physiological sleep mechanisms brain function psychological ramifications of sleep dimensions of dreaming and clinical disorders associated with sleep It is accessibly written with specially boxed material that enhances the text It also offers a good foundation for those who will continue sleep studies while at the same time offering enough information for those who will apply this knowledge in other ways such as clinicians private practices or researchers It is an excellent text for courses on sleep at the undergraduate and graduate levels The section on sleep labs will show how computers have replaced former models of data collection and storage includes the new area of the genetics of sleep add a new box on teen sleep insert a new box on the emerging information about how technology use affects sleep emphasize the controversy over rampart wide spread sleep deprivation and include a new box covering the connection between sleep loss and weight gain Additional inclusions might incorporate current hot topics such as the effect of shift work on sleep sleep problems in adolescents and nightmare treatment for people suffering from PTSD *The Neurocognitive Theory of Dreaming* G. William Domhoff, 2022-10-04 A comprehensive neurocognitive theory of dreaming based on the theories methodologies and findings of cognitive neuroscience and the psychological sciences G William Domhoff's neurocognitive theory of dreaming is the only theory of dreaming that makes full use of the new neuroimaging findings on all forms of spontaneous thought and shows how well they explain the results of rigorous quantitative studies of dream content Domhoff identifies five separate issues neural substrates cognitive processes the psychological meaning of dream content evolutionarily adaptive functions and historically invented cultural uses and then explores how they are intertwined He also discusses the degree to which there is symbolism in dreams the development of dreaming in children and the relative frequency of emotions in the dreams of children and adults During dreaming the neural substrates that support waking sensory input task oriented thinking and movement are relatively deactivated Domhoff presents the conditions that have to be fulfilled before dreaming can occur spontaneously He describes the specific cognitive processes supported by the neural substrate of dreaming and then looks at dream reports of research participants The why of dreaming he says may be the most counterintuitive outcome of empirical dream research Though the question is usually framed in terms of adaptation there is no positive evidence for an adaptive theory of dreaming

Research by anthropologists historians and comparative religion scholars however suggests that dreaming has psychological and cultural uses with the most important of these found in religious ceremonies and healing practices Finally he offers suggestions for how future dream studies might take advantage of new technologies including smart phones

**Conscious Mind, Sleeping Brain** J. Gackenbach,S. LaBarge,2012-12-06 A conscious mind in a sleeping brain the title of this book provides a vivid image of the phenomenon of lucid dreaming in which dreamers are consciously aware that they are dreaming while they seem to be soundly asleep Lucid dreamers could be said to be awake to their inner worlds while they are asleep to the external world Of the many questions that this singular phenomenon may raise two are foremost What is consciousness And what is sleep Although we cannot provide complete answers to either question here we can at least explain the sense in which we are using the two terms We say lucid dreamers are conscious because their subjective reports and behavior indicate that they are explicitly aware of the fact that they are asleep and dreaming in other words they are reflectively conscious of themselves We say lucid dreamers are asleep primarily because they are not in sensory contact with the external world and also because research shows physiological signs of what is conventionally considered REM sleep The evidence presented in this book preliminary as it is still ought to make it clear that lucid dreaming is an experiential and physiological reality Whether we should consider it a paradoxical form of sleep or a paradoxical form of waking or something else entirely it seems too early to tell

**Sleep Thieves** Stanley Coren,1997-04-03 An eye opening and engrossing exploration into the science and mysteries of sleep and sleeplessness from the bestselling author of *The Intelligence of Dogs* Is there some way to determine if you are getting enough sleep Do dogs and cats dream What are the ways to help children sleep through the night What role did sleep deficit play in the loss of the space shuttle Challenger and the nuclear accidents at Chernobyl and Three Mile Island Why is the shift to Daylight Savings Time dangerous Why do many sleeping medications actually make insomnia worse What was Leonardo da Vinci's technique for getting by with only an hour and a half of sleep each day The answers to these questions are in this fascinating and provocative book that will change the way you think about sleep
