

PRINCIPLES OF EXPERIMENTAL DESIGN

- The basic principles of statistical design of experiments are:
 1. **Control** the effects of lurking variables on the response, most simply by comparing two or more treatments.
 2. **Randomize** – use impersonal chance to assign experimental units to treatments.
 3. **Replicate** each treatment on many units to reduce chance variation in the results.

Statistical Principles in Experimental Design B. J. Winer, 1971 A revision of this classic statistics text for first year graduate students in psychology education and related social sciences The two new authors are former students of Winer's They have updated rewritten and reorganized the text to fit the course as it is now taught The Design of Experiments R. Mead, 1990-07-26 In all the experimental sciences good design of experiments is crucial to the success of research Well planned experiments can provide a great deal of information efficiently and can be used to test several hypotheses simultaneously This book is about the statistical principles of good experimental design and is intended for all applied statisticians and practising scientists engaged in the design implementation and analysis of experiments Professor Mead has written the book with the emphasis on the logical principles of statistical design and employs a minimum of mathematics Throughout he assumes that the large scale analysis of data will be performed by computers and he is thus able to devote more attention to discussions of how all of the available information can be used to extract the clearest answers to many questions The principles are illustrated with a wide range of examples drawn from medicine agriculture industry and other disciplines Numerous exercises are given to help the reader practise techniques and to appreciate the difference that good design of experiments can make to a scientific project Statistical Principles in Experimental Design B.
