

STATISTICAL CALCULATION

for Beginners

By E. G. CHAMBERS

The purpose is to explain as simply as possible how to perform the calculations involved in the commoner statistical methods, only sufficient theory being given to enable the student to understand the use and application of the methods described. No assumption of mathematical ability on the part of the reader is made; the calculations involve the use of arithmetic only. A worked example of each method given is provided, and many exercises with answers are supplied. Although the book is chiefly addressed to students of the biological sciences, especially psychology, the methods described are fundamental to statistical work and should prove useful to anyone who has to make use of elementary statistical methods.
