Statistics In The Computer Age New Science Series:

Computer Age Statistical Inference, Student Edition Bradley Efron, Trevor Hastie, 2011-06-17 The twenty first century has seen a breathtaking expansion of statistical methodology both in scope and influence Data science and machine learning have become familiar terms in the news as statistical methods are brought to bear upon the enormous data sets of modern science and commerce How did we get here And where are we going How does it all fit together Now in paperback and fortified with exercises this book delivers a concentrated course in modern statistical thinking Beginning with classical inferential theories Bayesian frequentist Fisherian individual chapters take up a series of influential topics survival analysis logistic regression empirical Bayes the jackknife and bootstrap random forests neural networks Markov Chain Monte Carlo inference after model selection and dozens more The distinctly modern approach integrates methodology and algorithms with statistical inference Each chapter ends with class tested exercises and the book concludes with speculation on the future direction of statistics and data science

The Real Work of Data Science Ron S. Kenett, Thomas C. Redman, 2019-03-26 The essential guide for data scientists and for leaders who must get more from their data science teams The Economist boldly claims that data are now the world's most valuable resource But as Kenett and Redman so richly describe unlocking that value requires far more than technical excellence The Real Work of Data Science explores understanding the problems dealing with quality issues building trust with decision makers putting data science teams in the right organizational spots and helping companies become data driven This is the work that spells the difference between a good data scientist and a great one between a team that makes marginal contributions and one that drives the business between a company that gains some value from its data and one in which data truly is the most valuable resource

These two authors are world class experts on analytics data management and data quality they've forgotten more about these topics than most of us will ever know Their book is pragmatic understandable and focused on what really counts If you want to do data science in any capacity you need to read it Thomas H Davenport Distinguished Professor Babson College and Fellow MIT Initiative on the Digital Economy I like your book The chapters address problems that have faced statisticians for generations updated to reflect today's issues such as computational Big Data Sir David Cox Warden of Nuffield College and Professor of Statistics Oxford University Data science is critical for competitiveness for good government for correct decisions But what is data science Kenett and Redman give by far the best introduction to the subject I have seen anywhere They address the critical questions of formulating the right problem collecting the right data doing the right analyses making the right decisions and measuring the actual impact of the decisions This book should become required reading in statistics and computer science departments business schools analytics institutes and most importantly by all business managers A Blanton Godfrey Joseph D Moore Distinguished University Professor Wilson College of Textiles North Carolina State University

Computational Statistics Yadolah Dodge, Joe Whittaker, 2013-11-11 The Role of the Computer in Statistics David Cox Nuffield College Oxford OX1 1NF U K A classification of statistical problems via their computational demands hinges on four components I the amount and complexity of the data il the specificity of the objectives of the analysis iii the broad aspects of the approach to analysis ill the conceptual mathematical and numerical analytic complexity of the methods Computational requirements may be limiting in I and ill either through the need for special programming effort or because of the difficulties of initial data management or because of the load of detailed analysis The implications of modern computational developments for statistical work can be illustrated in the context of the study of specific probabilistic models the development of general statistical theory the design of investigations and the analysis of empirical data While simulation is usually likely to be the most sensible way of investigating specific complex stochastic models computerized algebra has an obvious role in the more analytical work It seems likely that statistics and applied probability have made insufficient use of developments in numerical analysis associated more with classical applied mathematics in particular in the solution of large systems of ordinary and partial differential equations integral equations and integral differential equations and for the extraction of useful information from integral transforms Increasing emphasis on models incorporating specific subject matter considerations is one route to bridging the gap between statistical analysis and subject matter

Metadata Management in Statistical Information Processing Karl A. Froeschl, 2013-12-21 As the integration of statistical data collected in various subject matter domains becomes more and more important in several socio economic etc investigation areas the management of so called metadata a formal digital processing of information about data gains tremendously increasing relevance Unlike current information technologies e.g. database systems computer networks facilitating merely the technical side of data collation a coherent integration of empirical data still remains cumbersome and thus rather costly very often because of a lack of powerful semantic data models capturing the very meaning and structure of statistical data sets Recognizing this deficiency Metadata Management proposes a general framework for the computer aided integration and harmonization of distributed heterogeneous statistical data sources aiming at a truly comprehensive statistical meta information system
