Statistics Of Random Processes Vol 1 General Theory:

General Theory of Statistics Victor Aladjev, Valery Haritonov, 2004 Book Description The present book is a statistical course for undergraduate students in all fields of social and economic sciences The book presents a manual on the course General Theory of Statistics including a series of not quite traditional topics First of all it concerns the mathematical bases of statistics and use of computer technologies in statistical probing Thematic choice of the chapters and sections of the book is caused not only by interests and tastes of the authors but also by modern tendencies in applied statistics and orientation of the given work The book is based on a course of lectures given by the first author for undergraduates in social and economic sciences along with three books published in Russian and English in Estonia Lithuania and Byelorussia This book has been written for a large enough audience of teachers researchers statisticians students collegians and users of statistics in behavioral and social sciences Above all the book is directed to a wide circle of the readers studying statistical disciplines in high schools and colleges however it can be useful also to persons independently studying statistics Author Biography Aladjev V Z Professor Aladjev V Z was born on June 14 1942 in the town Grodno Byelorussia Now he is the First vice president of the International Academy of Noosphere and the president of Tallinn Research Group whose scientific results have received international recognition first in the field of mathematical theory of Cellular Automata CA He is member of a series of Russian and International Academies Aladjev V Z is the author of more than 330 scientific publications including 63 books published in many countries He participates as a member of the organizing committee and or a guest lecturer in many international scientific forums in mathematics and cybernetics Author Biography Haritonov V N Dr Haritonov V N was born on August 2 1946 in the town Nizhni Novgorod Russia On successful graduation from Tallinn Technical University he has acquired a profession of economics Since 1972 Haritonov V N has the respectable positions in the Estonian banking system Now he is the Chairman of the Board of Tallinn Business Bank Most considerable methodological projects and practical results of Haritonov V N are related to economic sciences and above all to banking field including automation of banking system banking statistics etc Along with a series of publications Haritonov V N has participated in many scientific and applied forums on banking economics Gaussian Random Processes I.A. Ibragimov, Y.A. Rozanov, 2012-12-06 The book deals mainly with three problems involving Gaussian stationary processes The first problem consists of clarifying the conditions for mutual absolute continuity equivalence of probability distributions of a random process segment and of finding effective formulas for densities of the equivalent distributions Our second problem is to describe the classes of spectral measures corresponding in some sense to regular stationary processes in particular satisfying the well known strong mixing condition as well as to describe the subclasses associated with mixing rate The third problem involves estimation of an unknown mean value of a random process this random process being stationary except for its mean i.e. it is the problem of distinguishing a signal from stationary noise Furthermore we give here auxiliary information on distributions in Hilbert

spaces properties of sample functions theorems on functions of a complex variable etc Since 1958 many mathematicians have studied the problem of equivalence of various infinite dimensional Gaussian distributions detailed and systematic presentation of the basic results can be found for instance in [23] In this book we have considered Gaussian stationary processes and arrived we believe at rather definite solutions The second problem mentioned above is closely related with problems involving ergodic theory of Gaussian dynamic systems as well as prediction theory of stationary processes

NASA Reference Publication ,1985 **NASA Technical Memorandum** ,1986 Stochastic Processes in Polymeric Fluids Hans C. Öttinger,2012-12-06 A SPECTER is haunting the scientific world the specter of computers All the powers of traditional science have entered into a holy alliance to exorcise this specter puristic theoreticians and traditional experimentalists editors and referees of prestigious journals philosophers of science and mathematicians Where is a pioneering computer simulation that has not been decried as unreliable by its opponents in power The Computer Manifesto As a result of the enormous progress in computer technology made during the last few decades computer simulations have become a very powerful and widely applicable tool in science and engineering The main purpose of this book is a comprehensive description of the background and possibilities for the application of computer simulation techniques in polymer fluid dynamics Modeling and understanding the flow behavior of polymeric liquids on the kinetic theory level is not merely a great intellectual challenge but rather a matter of immense practical importance for example in connection with plastics manufacture processing of foods and movement of biological fluids The classical computer simulation technique for static problems in statistical mechanics is the Monte Carlo method developed in the early 1950s The name of this method underlines how unusual and strange the idea of using random numbers in the exact sciences is at first glance However the Monte Carlo method is a rigorous and efficient means for evaluating moments and static spatial correlation functions for given probability distributions *Stochastic Processes for Insurance and Finance* Tomasz Rolski,Hanspeter Schmidli,V. Schmidt,Jozef L. Teugels,2009-09-25 *Stochastic Processes for Insurance and Finance* offers a thorough yet accessible reference for researchers and practitioners of insurance mathematics Building on recent and rapid developments in applied probability the authors describe in general terms models based on Markov processes martingales and various types of point processes Discussing frequently asked insurance questions the authors present a coherent overview of the subject and specifically address The principal concepts from insurance and finance Practical examples with real life data Numerical and algorithmic procedures essential for modern insurance practices Assuming competence in probability calculus this book will provide a fairly rigorous treatment of insurance risk theory recommended for researchers and students interested in applied probability as well as practitioners of actuarial sciences Wiley Series in Probability and Statistics **From Stochastic Calculus to Mathematical Finance** Yu. Kabanov,R. Liptser,J. Stoyanov,2007-04-03 Dedicated to the Russian mathematician Albert Shiryaev on his 70th birthday this is a collection of papers written by his former students co authors

and colleagues The book represents the modern state of art of a quickly maturing theory and will be an essential source and reading for researchers in this area Diversity of topics and comprehensive style of the papers make the book attractive for PhD students and young researchers

Statistical Estimation I.A. Ibragimov, R.Z. Has'minskii, 2013-11-11 when certain parameters in the problem tend to limiting values for example when the sample size increases indefinitely the intensity of the noise approaches zero etc To address the problem of asymptotically optimal estimators consider the following important case Let $X_1, X_2, \dots, X_n$ be independent observations with the joint probability density $x \in \mathbb{R}^n$ with respect to the Lebesgue measure on the real line which depends on the unknown parameter $\theta \in \mathbb{R}^1$ It is required to derive the best asymptotically efficient estimator $\hat{\theta}_n$ of the parameter θ The first question which arises in connection with this problem is how to compare different estimators or equivalently how to assess their quality in terms of the mean square deviation from the parameter or perhaps in some other way The presently accepted approach to this problem resulting from A Wald's contributions is as follows introduce a nonnegative function $w(\theta)$ the loss function and given two estimators $\hat{\theta}_1$ and $\hat{\theta}_2$ the estimator for which the expected loss risk $E w(\hat{\theta}_j - \theta)$ $j = 1, 2$ is smallest is called the better with respect to w at point θ here E_θ is the expectation evaluated under the assumption that the true value of the parameter is θ Obviously such a method of comparison is not without its defects

Brownian Motion T. Hida, 2012-12-06 Following the publication of the Japanese edition of this book several interesting developments took place in the area The author wanted to describe some of these as well as to offer suggestions concerning future problems which he hoped would stimulate readers working in this field For these reasons Chapter 8 was added Apart from the additional chapter and a few minor changes made by the author this translation closely follows the text of the original Japanese edition We would like to thank Professor J L Doob for his helpful comments on the English edition T Hida T P Speed v Preface The physical phenomenon described by Robert Brown was the complex and erratic motion of grains of pollen suspended in a liquid In the many years which have passed since this description Brownian motion has become an object of study in pure as well as applied mathematics Even now many of its important properties are being discovered and doubtless new and useful aspects remain to be discovered We are getting a more and more intimate understanding of Brownian motion

Transforming Noise Chen-Pang Yeang, 2023-10-15 Today the concept of noise is employed to characterize random fluctuations in general Before the twentieth century however noise only meant disturbing sounds In the 1900s 50s noise underwent a conceptual transformation from unwanted sounds that needed to be domesticated into a synonym for errors and deviations to be now used as all kinds of signals and information Transforming Noise examines the historical origin of modern attempts to understand control and use noise Its history sheds light on the interactions between physics mathematics mechanical technology electrical engineering and information and data sciences in the twentieth century This book explores the process of engineers and physicists turning noise into an informational concept starting from the rise of sound reproduction technologies such as the phonograph telephone and radio in the 1900s 20s until

the theory of Brownian motions for random fluctuations and its application in thermionic tubes of telecommunication systems. These processes produced different theoretical treatments of noise in the 1920s-30s such as statistical physicists' studies of Brownian fluctuations, temporal evolution, radio engineers' spectral analysis of atmospheric disturbances, and mathematicians' measure-theoretic formulation. Finally, it discusses the period during and after World War II and how researchers have worked on military projects of radar, gunfire control, and secret communications, and converted the interwar theoretical studies of noise into tools for statistical detection, estimation, prediction, and information transmission. To physicists, mathematicians, electrical engineers, and computer scientists, this book offers a historical perspective on themes highly relevant in today's science and technology, ranging from Wi-Fi and big data to quantum information and self-organization. This book also appeals to environmental and art historians, to modern music scholars, as the history of noise constitutes a unique angle to study sound and society. Finally, to researchers in media studies and digital cultures, *Transforming Noise* demonstrates the deep technoscientific historicity of certain notions: information, channel noise, equivocation, they have invoked to understand modern media and communication.
