Tsu, 2013-06-01 Nearly a century before it became known as Silicon Valley the Santa Clara Valley was world renowned for something else the succulent fruits and vegetables grown in its fertile soil In Garden of the World Cecilia Tsu tells the overlooked intertwined histories of the Santa Clara Valley's agricultural past and the Asian immigrants who cultivated the land during the region's peak decades of horticultural production Weaving together the story of three overlapping waves of Asian migration from China Japan and the Philippines in the nineteenth and twentieth centuries Tsu offers a comparative history that sheds light on the ways in which Asian farmers and laborers fundamentally altered the agricultural economy and landscape of the Santa Clara Valley as well as white residents' ideas about race gender and what it meant to be an American family farmer At the heart of American racial and national identity in the nineteenth and twentieth centuries was the family farm ideal the celebration of white European American families operating independent self-sufficient farms that would contribute to the stability of the nation In California by the 1880s boosters promoted orchard fruit growing as one of the most idyllic incarnations of the family farm ideal and the lush Santa Clara Valley the finest location to live out this agrarian dream But in practice many white growers relied extensively on hired help which in the late nineteenth and early twentieth centuries was largely Asian Detailing how white farmers made racial and gendered claims to defend their dependence on nonwhite labor how those claims shifted with the settlement of each Asian immigrant group and how Chinese Japanese and Filipinos sought to create their own version of the American dream in farming Tsu excavates the social and economic history of agriculture in this famed rural community to reveal the intricate nature of race relations there

Austin,2022-05-03 The Baboquivari Mountains long considered to be a sacred space by the Tohono O odham people who are native to the area are the westernmost of the so called Sky Islands The mountains form the border between the floristic regions of Chihuahua and Sonora This encyclopedic work describes the flora of this unique area in detail It includes descriptions identifications ecology and extensive etymologies of plant names in European and indigenous languages Daniel Austin also describes pollination biology and seed dispersal and explains how plants in the area have been used by humans beginning with Native Americans The term sky island was first used by Weldon Heald in 1967 to describe mountain ranges that are separated from each other by valleys of grassland or desert The valleys create barriers to the spread of plant species in a way that is similar to the separation of islands in an ocean The 70 000 square mile Sky Islands region of southeastern Arizona southwestern New Mexico and northwestern Mexico is of particular interest to botanists because of its striking diversity of plant species and habitats With more than 3 000 species of plants the region offers a surprising range of tropical and temperate zones Although others have written about the region this is the first book to focus exclusively on the plant life of the Baboquivari Mountains The book offers an introduction to the history of the region along with a discussion of human influences and includes a useful appendix that lists all of the plants known to be growing in the Baboquivari Mountain chain
