Statistical Challenges In Modern Astronomy:

Statistical Challenges in Modern Astronomy Eric D. Feigelson, G. Jogesh Babu, 2012-12-06 Modern astronomy has been characterized by an enormous growth in data acquisition from new technologies in telescopes detectors and computation One can now compile catalogs of tens or hundreds of millions of stars or galaxies and databases from satellite based observations are reaching terabit proportions This wealth of data gives rise to statistical challenges not previously encountered in astronomy This book is the result of a workshop held at Pennsylvania State University in August 1991 that brought together leading astronomers and statisticians to consider statistical challenges encountered in modern astronomical research The chapters have all been thoroughly revised in the light of the discussions at the conference and some of the lively discussion is recorded here as well

Statistical Challenges in Modern Astronomy V Eric D. Feigelson, G. Jogesh Babu, 2012-08-15 This volume contains a selection of chapters based on papers to be presented at the Fifth Statistical Challenges in Modern Astronomy Symposium The symposium will be held June 13 15th at Penn State University Modern astronomical research faces a vast range of statistical issues which have spawned a revival in methodological activity among astronomers The Statistical Challenges in Modern Astronomy V conference will bring astronomers and statisticians together to discuss methodological issues of common interest Time series analysis image analysis Bayesian methods Poisson processes nonlinear regression maximum likelihood multivariate classification and wavelet and multiscale analyses are all important themes to be covered in detail Many problems will be introduced at the conference in the context of large scale astronomical projects including LIGO AXAF XTE Hipparcos and digitized sky surveys

Statistical Challenges in Modern Astronomy II G. Jogesh Babu, Eric D. Feigelson, 2012-12-06 Modern astronomical research faces a vast range of statistical issues which have spawned a revival in methodological activity among astronomers The Statistical Challenges in Modern Astronomy II conference held in June 1996 at the Pennsylvania State University five years after the first conference brought astronomers and statisticians together to discuss methodological issues of common interest Time series analysis image analysis Bayesian methods Poisson processes nonlinear regression maximum likelihood multivariate classification and wavelet and multiscale analyses were important themes Astronomers frequently encounter troublesome situations such as heteroscedastic weighting of data unevenly spaced time series and selection effects leading to censoring and truncation Many problems were introduced at the conference in the context of large scale astronomical projects including LIGO AXAF XTE Hipparcos and digitized sky surveys This volume will be of interest to researchers and advanced students in both fields astronomers who seek exposure to recent developments in statistics and statisticians interested in confronting new problems It is edited by two faculty members of the Pennsylvania State University who have a long standing cross disciplinary collaboration and jointly authored the recent introductory monograph *Astrostatistics* G J Babu is Professor of Statistics Fellow of the Institute of Mathematical Statistics and Associate Editor of the *Journal of Statistical Planning Inference* and the *Journal*

of Nonparametric Statistics Eric D Feigelson is Professor of Astronomoy and Astrophysics

Feigelson,Jogesh Babu,2006-05-26 Digital sky surveys high precision astrometry from satellite data deep space data from orbiting telescopes and the like have all increased the quantity and quality of astronomical data by orders of magnitude per year for several years Making sense of this wealth of data requires sophisticated statistical techniques Fortunately statistical methodologies have similarly made great strides in recent years Powerful synergies thus emerge when astronomers and statisticians join in examining astrostatistical problems and approaches The book begins with an historical overview and tutorial articles on basic cosmology for statisticians and the principles of Bayesian analysis for astronomers As in earlier volumes in this series research contributions discussing topics in one field are joined with commentary from scholars in the other Thus for example an overview of Bayesian methods for Poissonian data is joined by discussions of planning astronomical observations with optimal efficiency and nested models to deal with instrumental effects The principal theme for the volume is the statistical methods needed to model fundamental characteristics of the early universe on its largest scales

Practical Statistics for Astronomers J. V. Wall, C. R. Jenkins, 2012-04-26 Astronomy needs statistical methods to interpret data but statistics is a many faceted subject that is difficult for non specialists to access This handbook helps astronomers analyze the complex data and models of modern astronomy This second edition has been revised to feature many more examples using Monte Carlo simulations and now also includes Bayesian inference Bayes factors and Markov chain Monte Carlo integration Chapters cover basic probability correlation analysis hypothesis testing Bayesian modelling time series analysis luminosity functions and clustering Exercises at the end of each chapter guide readers through the techniques and tests necessary for most observational investigations The data tables solutions to problems and other resources are available online at www.cambridge.org/9780521732499 Bringing together the most relevant statistical and probabilistic techniques for use in observational astronomy this handbook is a practical manual for advanced undergraduate and graduate students and professional astronomers

Selected Works of Peter J. Bickel Jianqing Fan, Ya'acov Ritov, C.F. Jeff Wu, 2012-11-28 This volume presents selections of Peter J Bickel's major papers along with comments on their novelty and impact on the subsequent development of statistics as a discipline Each of the eight parts concerns a particular area of research and provides new commentary by experts in the area The parts range from Rank Based Nonparametrics to Function Estimation and Bootstrap Resampling Peter's amazing career encompasses the

majority of statistical developments in the last half century or about about half of the entire history of the systematic development of statistics This volume shares insights on these exciting statistical developments with future generations of statisticians The compilation of supporting material about Peter s life and work help readers understand the environment under which his research was conducted The material will also inspire readers in their own research based pursuits This volume includes new photos of Peter Bickel his biography publication list and a list of his students These give the reader a more complete picture of Peter Bickel as a teacher a friend a colleague and a family man
