Statistics from Scratch Peter Nemenyi, 1977 *Catalogs of the Scripps Institution of Oceanography Library* Scripps Institution of Oceanography. Library, 1980 **Concentration Inequalities** Stéphane Boucheron, Gábor Lugosi, Pascal Massart, 2013-02-07 Describes the interplay between the probabilistic structure independence and a variety of tools ranging from functional inequalities to transportation arguments to information theory Applications to the study of empirical processes random projections random matrix theory and threshold phenomena are also presented **The Splendors and Miseries of Martingales** Laurent Mazliak, Glenn Shafer, 2022-10-17 Over the past eighty years martingales have become central in the mathematics of randomness They appear in the general theory of stochastic processes in the algorithmic theory of randomness and in some branches of mathematical statistics Yet little has been written about the history of this evolution This book explores some of the territory that the history of the concept of martingales has transformed The historian of martingales faces an immense task We can find traces of martingale thinking at the very beginning of probability theory because this theory was related to gambling and the evolution of a gambler's holdings as a result of following a particular strategy can always be understood as a martingale More recently in the second half of the twentieth century martingales became important in the theory of stochastic processes at the very same time that stochastic processes were becoming increasingly important in probability statistics and more generally in various applied situations Moreover a history of martingales like a history of any other branch of mathematics must go far beyond an account of mathematical ideas and techniques It must explore the context in which the evolution of ideas took place the broader intellectual milieu of the actors the networks that already existed or were created by the research even the social and political conditions that favored or hampered the circulation and adoption of certain ideas This book presents a stroll through this history in part a guided tour in part a random walk First historical studies on the period from 1920 to 1950 are presented when martingales emerged as a distinct mathematical concept Then insights on the period from 1950 into the 1980s are offered when the concept showed its value in stochastic processes mathematical statistics algorithmic randomness and various applications Monographic Series Library of Congress, 1978 *Lectures in Mathematical Statistics* И. N. Lin'kov, This volume is intended for the advanced study of several topics in mathematical statistics The first part of the book is devoted to sampling theory from one dimensional and multidimensional distributions asymptotic properties of sampling parameter estimation sufficient statistics and statistical estimates The second part is devoted to hypothesis testing and includes the discussion of families of statistical hypotheses that can be asymptotically distinguished In particular the author describes goodness of fit and sequential statistical criteria Kolmogorov Pearson Smirnov and Wald and studies their main properties The book is suitable for graduate students and researchers interested in mathematical statistics It is useful for independent study or supplementary reading

Random Toeplitz Functionals and Their Applications Mamikon S. Ginovyan, 2025-11-14

This book presents recent findings on central and non central limit theorems for Toeplitz and tapered Toeplitz random quadratic functionals of stationary processes with applications in spectral based statistical inference It focuses on Gaussian orthogonal increment driven and Levy driven linear stationary processes with memory in both discrete and continuous time Toeplitz matrices and operators are central to the study of stationary processes The covariance matrix of a discrete time stationary process is a truncated Toeplitz matrix generated by the process's spectral density in continuous time this becomes a Toeplitz operator The foundations of the trace approximation problem were laid by Grenander and Szeg in their classical monograph Toeplitz Forms and Their Applications 1958 and the subject has recently seen renewed interest due to developments in long range dependence and tapered data analysis The book addresses topics that are often overlooked in other texts including the trace approximation problem central limit theorems in continuous time functional central and non central limit theorems for Toeplitz processes and central limit theorems for tapered functionals It also covers approaches to estimating linear and nonlinear spectral functionals Whittle estimators and goodness of fit tests using tapered data each enriched by new advances in the field Comprising ten chapters and two appendices the book begins with an overview of the main problems and a review of foundational concepts from real analysis functional analysis and matrix analysis It then introduces a model that is a second order stationary process and discusses key concepts and results from the general theory of stationary processes before delving into the trace approximation problem Subsequent chapters cover central and non central limit theorems for Toeplitz and tapered Toeplitz random quadratic functionals and explore statistical inference problems The appendices discuss the motivations and benefits of data tapering and outline several important problems closely related to the main themes of the book The text will be a valuable resource for researchers in time series analysis econometrics finance and applied statistics It is suitable for graduate level courses in time series analysis or the statistics of stochastic processes and as a supplementary reference for students of advanced statistics probability econometrics or finance Mathematica Scandinavica ,1965 *Catalog of Copyright Entries.
