Statistics Registries And Science Experiences From Finland:

Statistics, Registries, and Science Juha Alho, 1999 Provides information on Finnish statistical innovation both in academics and administration including historical and and current work Nordic Labour Market Research on Register Data Torben Pilegaard Jensen, Anders Holm, 2001 Statistical Demography and Forecasting Juha Alho, Bruce Spencer, 2006-05-27 Sustainability of pension systems intergeneration fiscal equity under population aging and accounting for health care benefits for future retirees are examples of problems that cannot be solved without understanding the nature of population forecasts and their uncertainty Similarly the accuracy of population estimates directly affects both the distributions of formula based government allocations to sub national units and the apportionment of political representation The book develops the statistical foundation for addressing such issues Areas covered include classical mathematical demography event history methods multi state methods stochastic population forecasting sampling and census coverage and decision theory The methods are illustrated with empirical applications from Europe and the U S For statisticians the book provides a unique introduction to demographic problems in a familiar language For demographers actuaries epidemiologists and professionals in related fields the book presents a unified statistical outlook on both classical methods of demography and recent developments To facilitate its classroom use exercises are included Over half of the book is readily accessible to undergraduates but more maturity may be required to benefit fully from the complete text Knowledge of differential and integral calculus matrix algebra basic probability theory and regression analysis is assumed Juha M Alho is Professor of Statistics University of Joensuu Finland and Bruce D Spencer is Professor of Statistics and Faculty Fellow at the Institute for Policy Research Northwestern University Both have contributed extensively to statistical demography and served in advisory roles and as statistical consultants in the field *Old and New Perspectives on Mortality Forecasting* Tommy Bengtsson, Nico Keilman, 2019-03-28 This open access book describes methods of mortality forecasting and discusses possible improvements It contains a selection of previously unpublished and published papers which together provide a state of the art overview of statistical approaches as well as behavioural and biological perspectives The different parts of the book provide discussions of current practice probabilistic forecasting the linearity in the increase of life expectancy causes of death and the role of cohort factors The key question in the book is whether it is possible to project future mortality accurately and if so what is the best approach This makes the book a valuable read to demographers pension planners actuaries and all those interested and or working in modelling and forecasting mortality Famine Demography Tim Dyson, Cormac Ó Gráda, 2002 This book deals with the important subject of famine demography It contains case studies of the demography of historical and more recent famines in locations as far apart as Ireland Finland India Burundi Russia Greece Madagascar and Japan The authors address issues such as the role of famines in controlling population growth in the past the nature of interactions between starvation and epidemic diseases during times of famine and the detailed demographic

consequences of famines In the latter category issues such as the age and cause specific profiles of excess famine mortality receive particular attention Famine Demography illustrates how the demographic impacts of famines can vary according for example to the nature of the famine causation process and the socio economic and demographic characteristics of the populations which are affected The nature and basis of sex differentials in famine mortality are a recurring theme of the book as are the implications for human fertility and migration This is the only comparative volume of its kind It is wide ranging in time and place but at the same time focuses sharply on a particular subject Consequently its contents provide a unique understanding of famine demography which should be of interest to academics and practitioners involved in limiting the consequences of famines

Väestöntutkimuksen vuosikirja ,2001 Demography: Analysis and Synthesis, Four Volume Set ,2005-12-20 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks Demography Analysis and Synthesis offers a long overdue thorough treatment of the field Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of Demography Analysis and Synthesis have explored and developed This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic social political and cultural environments Limiting themselves to human populations only the authors and editors cover subjects that range from the core building blocks of population change fertility mortality and migration to the consequences of demographic changes in the biological and health fields population theories and doctrines observation systems and the teaching of demography The international perspectives brought to these subjects is vital for those who want an unbiased rounded overview of these complex multifaceted subjects Topics to be covered Population Dynamics and the Relationship Between Population Growth and Structure The Determinants of Fertility The Determinants of Mortality The Determinants of Migration Historical and Geographical Determinants of Population The Effects of Population on Health Economics Culture and the Environment Population Policies Data Collection Methods and Teaching about Population Studies All chapters share a common format Each chapter features several cross references to other chapters Tables charts and other non text features are widespread Each chapter contains at least 30 bibliographic citations

Socioeconomic Differences in Old Age Mortality Rasmus Hoffmann,2008-10-11 Social differences in health and mortality constitute a persistent finding in epidemiological demographic and sociological research This topic is increasingly discussed in the political debate and is among the most urgent public health issues However it is still unknown if socioeconomic mortality differences increase or decrease with age

This book provides a comprehensive thoughtful and critical discussion of all aspects involved in the relationship between socioeconomic status health and mortality In a well written language it synthesizes the sociological theory of social inequality and an empirical study of mortality differences that has been performed at the Max Planck Institute for Demographic Research Rostock Germany The best available datasets from Denmark and the USA as two very different countries are used to analyze the age pattern of social mortality differences the Danish register data covering the whole Danish population between 1980 and 2002 This study is the most comprehensive analysis of socioeconomic mortality differences in the literature in terms of data quantity quality and the statistical method of event history modeling It makes important new theoretical and empirical contributions With a new method it also addresses the question whether the measurement of social mortality differences in old age so far has been biased by mortality selection due to unobserved heterogeneity This book signifies an important step forward in theory empirical data analysis and methodology and an advancement for many disciplines involved in the subject of socioeconomic differences in old age mortality Prof Dr Gabriele Doblhammer Max Planck Institute for Demographic Research Rostock Germany

Statistical Sources for Social Research on Western Europe 1945-1995 Franz Rothenbacher, 2013-11-11 The intention of this book is to give a picture of the complex material that has been published in the field of social and economic statistics in Western Europe Although there are many guides bibliographies and reference books on special topics of this broad theme a general overview has been missing With this book I hope to fill this gap The frame of reference is a scientific one enabling and facilitating comparative social research on Western Europe In some respect this book enlarges and updates the bibliography written by Peter Flora *Quantitative Historical Sociology* published in *Current Sociology* in 1975 In principle this guide is an annotated bibliography of the most important printed material in the field of official statistics The legitimacy of such an approach lies in the fact that even today printed statistics are the most important form of dissemination of statistical results although microcomputers CD ROMs and the Internet have changed this situation In any case a special section on statistical databases is included for every country describing the main databases of the statistical offices Furthermore the Internet address of each international or national statistical institute is provided in the introductory paragraph This enables the reader to get fast access to online databases and supplementary online information on statistics via the Internet

Trends in Mortality and Differential Mortality Jacques Vallin, France Meslé, Tapani Valkonen, 2001 The average life expectancy for Europeans has increased from 45 years to 73 years during the last century However important differences in mortality risks are still present throughout Europe For example there is a higher mortality rate in Eastern Europe and in some eastern European countries life expectancy is actually decreasing This study examines mortality trends in the Council of Europe member states over the last 50 years including life expectancy the reduction in infant mortality trends in main groups of deaths and the health crisis in eastern and central Europe It also considers the links between life expectancy and socioeconomic indicators for 11 European

countries
