Neuropedia | The Deblocking Method Paulo Sergio Santos Negrete, aka, "Teacher John Chapman", 2021-03-09 Welcome to Neuropedia The Deblocking Method This method accelerates learning 3 to 5 times more than any conventional method It has several positive by products such as psychotherapeutic and psycho hygienic effects in the Suggestopedic environment created in the classroom During my years of teaching English as a Foreign Language I could never accept the fact that my students needed so many years to start speaking a new language with confidence Some others even with years of study and dedication could not develop despite my efforts to create better classes and activities Others had to constantly review the verb to be The results The students were afraid of speaking and learning Many people may ask But how can it be possible to learn effectively in a short time What's the secret Others say That's impossible It is just propaganda But actually we are beings with an incredible power to learn but the Social Suggestive Norms so present in our pedagogical system for centuries dictate how much we can learn and how long we need to But I ask you How did we learn our mother language How could our brain collect organize understand and reproduce words and sentences when we were children No one went to school to learn to speak Our parents or who may have raised us never taught us grammar in order to make us speak We can realize that we are missing something in our system of foreign language teaching It does not use the resources available in our brain mind Our way of teaching in the present is not structured to follow the way the brain receives stores and processes information So why not change the whole system The answer is quite simple Who wants to train teachers Change textbooks and methods How long would it take But the fact is that more scientists are discovering the mysteries of mind and memory We are taking advantage of these discoveries made centuries and decades ago Researchers have noticed that the current pedagogic system is not the best approach to learn That's why so many so called accelerated learning systems or brain friendly approaches have appeared The main problem is that most of them have never been really tested They have not had a follow up for decades to check if they would be beneficial to the students Neuropedia is a method with a scientific background **Elt Methods and Approaches: Experiments and Observations** Taj Mohammad, Soada Idris, 2022-05-16 **ELT METHODS AND APPROACHES EXPERIMENTS AND OBSERVATIONS** narrates the experiments and observations of different methodological

approaches in English Language Teaching The beginning of each chapter provides a conceptual framework of each method and approach supported by well known critics and scholars in the field Such a theoretical background to most of the methods and approaches in English Language Teaching may attract students research scholars and classroom teachers The book shares personal experiences in writing this book an amalgam of theory and practice in English Language Teaching They emphasize the application of those methods and approaches in a particular EFL ESL situation That is what seemed to motivate me to write this book a different source in that it not only provides the conceptual framework of different methods approaches and techniques but also executes and experiments with them in EFL ESL situations The work is unique as it not only experiments with different methods and approaches but also observes what practical challenges learners and teachers face during their implementation as well as how these difficulties can be addressed and overcome This text has provided adequate scope for learners the target group to integrate them into the research They have actively participated in the creation and formation of this book The book has positively included learners feedback on the execution approach and technique Their feedback is important in assessing whether a method or approach is successful in a specific EFL ESL environment Learners feedback has assisted the authors as they present discuss and assess the advantages and disadvantages of each method We have shared personal experiences with different EFL ESL learners in three countries the United States of America Saudi Arabia and India

brain capacities **E-Pedagogy for the Digital Age** Dr. P. C. Nagasubramani, Adult learners have more options for enrolling in postsecondary education than ever before and they are able to use their learning style preference in deciding which program best meets their needs For some of these students those programs are fully online and for others there is minimal use of technology As technology grows and become more integrated into individual lives the unique learning styles and preferences of adults need to learn to be incorporated into instructional design Drawing on a regional sample of US colleges 545 adult learners in a graduate programs were surveyed about how to effectively build community in their online classes Results indicated some agreement with these instructional tools Mature adult learners however were found to have stronger agreement with strategies that included work outside of the formal online class These results suggest perhaps a greater comfort for adults in working in spaces where there is less likelihood of being judged or graded and that they might value relational work with other students in different ways than younger adults **English Teaching Forum** ,2000
