Solving Business Problems with MRP II Alan D. Luber, 1991 **Solving Business Problems with MRP II** Alan D. Luber, 1995 This guide helps managers and end users apply Manufacturing Resource Planning MRP II to solve specific business problems with material shortages quality inventory customer service and cash management Appendices examine the implementation stages of MRP II and discuss the capabilities required to support multiplant manufacturing environments and the impact of client server technology on the new generation of MRP II software packages Annotation copyright by Book News Inc Portland OR *Advanced Models for Manufacturing Systems Management* A Villa, 1995-09-19 This book presents the mathematical models applicable to manufacturing systems management covering problems from production to real time control It explores manufacturing systems from the viewpoints of both physical structure and performance measures Two broad classes of mathematical models are covered in detail Generative models which yield a set of decision variables optimizing a performance measure based on mathematical optimization Evaluative models which evaluate some performance measures as a function of some predefined decision strategy Within this class Petri Nets and Queueing Networks are discussed *Advanced Models for Manufacturing Systems Management* describes dynamic systems modeling by state equations a unifying framework for a wide variety of models The text reference stresses model building but it examines model solving as well Computational techniques are illustrated such as linear programming branch and bound methods and dynamic programming Particular emphasis is given to the development of heuristic methods from mathematical models The book provides readers with valuable tools for management and design The use of descriptive models within an optimization algorithm is considered Numerous examples illustrate theoretical concepts throughout text Appendices are given at the end of the book in order to recall fundamentals such as linear programming and graph theory Appendices also appear within each chapter In this way readers can follow the main reading path without getting involved with details these appendices can be read at a later time This textual structure makes this book particularly well suited for self study *Advanced Models for Manufacturing Systems Management* is beneficial reading for both students and practitioners *Manufacturing Competitiveness Frontiers*, 1991 **Production and Operations Management** K.C. Arora, 2004 **Manufacturing Information and Data Systems** Franjo Cecelja, 2002-06-01 Recent years have witnessed an increase in the use of information technology in manufacturing so much so that it has rapidly permeated the organization at every level Consequently there is a growing need for those related to or interested in manufacturing to understand the nature of this technology and the way it can best be used to increase competitive advantage hence the profit This book is a contribution towards better understanding of information technology and information systems and their application in manufacturing The main feature of this book is that it addresses information systems and its application in manufacturing with a view to improving the competitive advantage It offers fundamental understanding of information technology and underpinning

principles but also practical issues related to its implementation and operation. Additionally, the material is structured such that the reader is taken logically from basic principles to practical issues of information systems. Yet chapters tend to be sufficiently independent, making the text suitable for those with particular interest.

Enterprise Process Management Systems Vivek Kale, 2018-10-10

Enterprise Process Management Systems Engineering Process Centric Enterprise Systems using BPMN 2.0 proposes a process-centric paradigm to replace the traditional data-centric paradigm for Enterprise Systems. ES should be reengineered from the present data-centric enterprise architecture to process-centric process architecture to be called as Enterprise Process Management Systems (EPMS). The real significance of business processes can be understood in the context of current heightened priority on digital transformation or digitalization of enterprises. Conceiving the roadmap to realize a digitalized enterprise via the business model innovation becomes amenable only from the process-centric view of the enterprise. This pragmatic book introduces Enterprise Process Management Systems (EPMS) solutions that enable an agile enterprise. Describes distributed systems and Service Oriented Architecture (SOA) that paved the road to EPMS. Leverages SOA to explain the cloud-based realization of business processes in terms of Web Services. Describes how BPMN 2.0 addresses the requirements for agility by ensuring a seamless methodological path from process requirements modeling to execution and back to enable process improvements. Presents the spreadsheet-driven Spreadsheets Application Development (SAD) methodology for the design and development of process-centric application systems. Describes process improvement programs ranging right from disruptive programs like BPR to continuous improvement programs like lean six sigma and TOC. Enterprise Process Management Systems Engineering Process Centric Enterprise Systems using BPMN 2.0 describes how BPMN 2.0 can not only capture business requirements but it can also provide the backbone of the actual solution implementation. Thus, the same diagram prepared by the business analyst to describe the business's desired To Be process can also be used to automate the execution of that process on a modern process engine.
