Some Generalized Kac Moody Algebras With Known Root Multiplicities:

Some Generalized Kac-Moody Algebras with Known Root Multiplicities Peter Niemann, 2002 Starting from Borcherds fake monster Lie algebra this text constructs a sequence of six generalized Kac Moody algebras whose denominator formulas, root systems and all root multiplicities can be described explicitly. The root systems decompose space into convex holes of finite and affine type similar to the situation in the case of the Leech lattice. As a corollary we obtain strong upper bounds for the root multiplicities of a number of hyperbolic Lie algebras including E_{24} .

On Some Generalized Kac-Moody Algebras with Known Root Multiplicities Peter Niemann, 1994

The Lifted Root Number Conjecture and Iwasawa Theory Jürgen Ritter, Alfred Weiss, 2002 This paper concerns the relation between the Lifted Root Number Conjecture as introduced in GRW2 and a new equivariant form of Iwasawa theory. A main conjecture of equivariant Iwasawa theory is formulated and its equivalence to the Lifted Root Number Conjecture is shown subject to the validity of a semi-local version of the Root Number Conjecture which itself is proved in the case of a tame extension of real abelian fields.

Radially Symmetric Patterns of Reaction-Diffusion Systems Arnd Scheel, 2003 Includes a paper that studies bifurcations of stationary and time periodic solutions to reaction diffusion systems. This title develops a center manifold and normal form theory for radial dynamics which allows for a complete description of radially symmetric patterns.

q -Difference Operators, Orthogonal Polynomials, and Symmetric Expansions Douglas Bowman, 2002 The author explores ramifications and extensions of a q difference operator method first used by L. J. Rogers for deriving relationships between special functions involving certain fundamental q symmetric polynomials. In special cases these symmetric polynomials reduce to well known classes of orthogonal polynomials. A number of basic properties of these polynomials follow from this approach. This leads naturally to the evaluation of the Askey-Wilson integral and generalizations. Expansions of certain generalized basic hypergeometric functions in terms of the symmetric polynomials are also found. This provides a quick route to understanding the group structure generated by iterating the two term transformations of these functions. Some infrastructure is also laid for more general investigations in the future.

Invariants of Boundary Link Cobordism Desmond Sheiham, 2003 An n dimensional μ component boundary link is a codimension 2 embedding of spheres $L \sqcup \mu S^1 \subset S^{n+2}$ such that there exist μ disjoint oriented embedded $n-1$ manifolds which span the components of L . This title proceeds to compute the isomorphism class of C_μ .

Topological Invariants for Projection Method Patterns Alan Forrest, John Hunton, Johannes Kellendonk, 2002 This memoir develops, discusses and compares a range of commutative and non commutative invariants defined for projection method tilings and point patterns. The projection method refers to patterns

particularly the quasiperiodic patterns constructed by the projection of a strip of a high dimensional integer lattice to a smaller dimensional Euclidean space In the first half of the memoir the acceptance domain is very general any compact set which is the closure of its interior while in the second half the authors concentrate on the so called canonical patterns The topological invariants used are various forms of K theory and cohomology applied to a variety of both C DEGREES algebras and dynamical systems derived from such a p

\mathcal{R} -Boundedness, Fourier Multipliers and Problems of Elliptic and Parabolic Type Robert Denk, Matthias Hieber, Jan Prüss, 2003 The property of maximal L_p regularity for parabolic evolution equations is investigated via the concept of \mathcal{R} sectorial operators and operator valued Fourier multipliers As application we consider the L_q realization of an elliptic boundary value problem of order $2m$ with operator valued coefficients subject to general boundary conditions We show that there is maximal $L_p L_q$ regularity for the solution of the associated Cauchy problem provided the top order coefficients are bounded and uniformly continuous

Positive Definite Functions on Infinite-Dimensional Convex Cones Helge Glöckner, 2003 A memoir that studies positive definite functions on convex subsets of finite or infinite dimensional vector spaces It studies representations of convex cones by positive operators on Hilbert spaces It also studies the interplay between positive definite functions and representations of convex cones

Extending Intersection Homology Type Invariants to Non-Witt Spaces Markus Banagl, 2002 Intersection homology theory provides a way to obtain generalized Poincare duality as well as a signature and characteristic classes for singular spaces For this to work one has had to assume however that the space satisfies the so called Witt condition We extend this approach to constructing invariants to spaces more general than Witt spaces

Segre's Reflexivity and an Inductive Characterization of Hyperquadrics Yasuyuki Kachi, Eiichi Sato, 2002 Introduction The universal pseudo quotient for a family of subvarieties Normal bundles of quadrics in X Morphisms from quadrics to Grassmannians Pointwise uniform vector bundles on non singular quadrics Theory of extensions of families over Hilbert schemes Existence of algebraic quotient proof of Theorem 0 3 Appendix Deformations of vector bundles on infinitesimally rigid projective varieties with null global i forms References

Interpolation of Weighted Banach Lattices/A Characterization of Relatively Decomposable Banach Lattices Michael Cwikel, Per G. Nilsson, Gideon Schechtman, 2003 Includes a paper that provides necessary and sufficient conditions on a couple of Banach lattices of measurable functions $X_0 X_1$ which ensure that for all weight functions w_0 and w_1 the couple of weighted lattices $X_0 w_0 X_1 w_1$ is a Calderon Mityagin couple

Noether-Lefschetz Problems for Degeneracy Loci Jeroen Spandaw, 2003 Studies the cohomology of degeneracy loci This title assumes that E otimes F DEGREES v is ample and globally generated and that ψ is a general homomorphism In order to study the cohomology of Z it considers the Grassmannian bundle $\pi: Y \rightarrow G(r, F)$ to X of r dimensional linear subspaces of the fibre

From Representation Theory to Homotopy Groups Donald M. Davis, 2002 A formula for the odd primary v_1 periodic homotopy groups of a finite H space in terms of its K theory and Adams operations has been obtained by Bousfield This work

applies this theorem to give explicit determinations of the v_1 periodic homotopy groups of $E_8/5$ and $E_8/3$ thus completing the determination of all odd primary v_1 periodic homotopy groups of all compact simple Lie groups a project suggested by Mimura in 1989

Yang-Mills Measure on Compact Surfaces Thierry Lévy, 2003 In this memoir we present a new construction and new properties of the Yang Mills measure in two dimensions This measure was first introduced for the needs of quantum field theory and can be described informally as a probability measure on the space of connections modulo gauge transformations on a principal bundle We consider the case of a bundle over a compact orientable surface Our construction is based on the discrete Yang Mills theory of which we give a full account We are able to take its continuum limit and to define a pathwise multiplicative process of random holonomy indexed by the class of piecewise embedded loops We study in detail the links between this process and a white noise and prove a result of asymptotic independence in the case of a semi simple structure group We also investigate global Markovian properties of the measure related to the surgery of surfaces

Abstract Band Method via Factorization, Positive and Band Extensions of Multivariable Almost Periodic Matrix Functions, and Spectral Estimation L. Rodman, Ilya M. Spitkovskii, Hugo Jan Woerdeman, 2002 In this work versions of an abstract scheme are developed which are designed to provide a framework for solving a variety of extension problems The abstract scheme is commonly known as the band method The main feature of the new versions is that they express directly the conditions for existence of positive band extensions in terms of abstract factorizations with certain additional properties The results prove amongst other things that the band extension is continuous in an appropriate sense

The $\$AB\$$ Program in Geometric Analysis: Sharp Sobolev Inequalities and Related Problems Olivier Druet, Emmanuel Hebey, 2002 Function theory and Sobolev inequalities have been the target of investigation for many years Sharp constants in these inequalities constitute a critical tool in geometric analysis The AB programme is concerned with sharp Sobolev inequalities on compact Riemannian manifolds This text summarizes the results of contemporary research and gives an up to date report on the field

The Connective K-Theory of Finite Groups Robert Ray Bruner, John Patrick Campbell Greenlees, 2003 Includes a paper that deals the connective K homology and cohomology of finite groups G This title uses the methods of algebraic geometry to study the ring $ku_{DEGREES BG}$ where ku denotes connective complex K theory It describes the variety in terms of the category of abelian p subgroups of G for primes p dividing the group

Desingularization of Nilpotent Singularities in Families of Planar Vector Fields Daniel Panazzolo, 2002 This work aims to prove a desingularization theorem for analytic families of two dimensional vector fields under the hypothesis that all its singularities have a non vanishing first jet Application to problems of singular perturbations and finite cyclicity are discussed in the last chapter
